HT's are usually $200-$350 or so; more than that and you can get a dual
or 3 band radio that covers 440 and maybe 220 as well.

2028. Duplexer Wanted 2 Mtr/440

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-15 00:00:00 UTC
From: szrwryan@chip.ucdavis.edu
Message-ID: <43asju$m2c@mark.ucdavis.edu>
Source record: 212443

Looking for a duplexer for my dual band radio.
440/ 2 Meter
Thanks Rich WB6HNC rwryan@ucdavis.edu

2029. Re: RF output on TS-440S?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-15 00:00:00 UTC
From: turtle@wwa.com
Message-ID: <43bjpg$pks@sake.wwa.com>
Source record: 212444

AS AN OPERATOR OF THE KENWOOD TS440S HF TRANSCEIVER, I HAVE FOUND
THAT CONTROL OF THE SSB POWER FROM THE FRONT PANEL WOULD
SIMPLIFY THE OPERATION OF THE TRANSCEIVER. THEREFORE, I HAVE
DESIGNED AND INSTALLED A MODIFICATION ON MY RIG AND WOULD LIKE TO
SHARE THIS IMPROVEMENT WITH OTHER OWNERS OF THIS PIECE OF
GEAR. ON THE FOLLOWING IS A DETAILED DESCRIPTION OF THAT
MODIFICATION.

KENWOOD TS-440S SSB CONTROL
WITH THE FRONT PANEL CARRIER CONTROL KNOB

THE KENWOOD TS440S HF TRANSCEIVER IS PROBABLY ONE
OF THE BEST ALL AROUND RIGS FOR MOBILE OR PORTABLE
OPERATION, AS WELL AS A GREAT BASE RIG. WHILE THE
KENWOOD TS 440S IS A GREAT LITTLE RIG, IT DOES LACK
A FEW OF THE IMPROVEMENTS THAT THE ARE STANDARD IN
THE OTHER RIGS. ONE SUCH IMPROVEMENT IS CONTROL OF
THE SSB OUTPUT FROM THE FRONT PANEL. BEFORE THIS
MODIFICATION THE ONLY WAY TO ADJUST THE SSB OUTPUT
WITH OUT AN EXTERNAL CIRCUIT WAS TO DISASSEMBLE
THE BOTTOM HALF OF THE CASE AND ADJUST VR1 (ALC).

ALTHOUGH THIS IS A VERY SIMPLE MODIFICATION IF YOU ARE
NOT COMFORTABLE AT WORKING ON ELECTRONIC CIRCUITS DO
NOT ATTEMPT THIS MODIFICATION.

THIS MODIFICATION INVOLVES JUMPERING THE CATHODE OF D48
TO THE ANODE OF D51 ON THE IF BOARD.

1. REMOVE TOP COVER EXPOSING THE I.F. BOARD

2. LOCATE J28. IT IS A TWO (2) PRONG PLUG VECTORED
APPROXIMATELY 2 INCHES FROM THE BACK OF THE I.F.
BOARD AND IN THE CENTER OF THE BOARD. D48 IS
LOCATED JUST TO THE RIGHT OF PLUG J28.

3. NOW LOCATE J19. IT IS VECTORED APPROXIMATELY TWO (2)
INCHES FROM THE FRONT AND IN THE CENTER OF THE BOARD.
D51 IS LOCATED IN BACK OF PIN #8 COUNTING FROM THE LEFT.

4. PREPARE A FIVE INCH PIECE OF #22 HOOKUP WIRE BY STRIPPING
AND TINNING THE ENDS OF THE WIRE APPROXIMATELY ONE FORTH
OF AN INCH ON ONE END, ONE EIGHT OF INCH ON THE OTHER.

5. CAREFULLY APPLY SOLDER TO THE TOP OF D51.

6. CAREFULLY SOLDER THE ONE EIGHTH INCH END OF THE PREPARED WIRE TO TOP OF D51.

7. GENTLY FORCE THE OTHER END OF THE WIRE INTO THE TOP OF PIN #1 OF J28. PIN #1 IS THE ONE ON THE LEFT OF THE PLUG.

8. REASSEMBLE THE COVER.

WITH THIS MODIFICATION YOU CAN SOLDER THE WIRE TO THE FOILS ON THE BOTTOM OF THE I.F. BOARD, BUT IT REQUIRES UNPLUGING ALLOT OF PLUGS FROM THE I.F. BOARD.

WARNING: ALTHOUGH THE SWR PROTECTION CIRCUIT IS STILL IN PLACE, THIS MODIFICATION CAN PRODUCE POWER OUTPUTS THAT CAN EXCEED 180 WATTS AND DAMAGE THE FINAL TRANSISTORS SO BE CAREFUL!

Respectfully seeking info on an old '41 Hallicrafter Sky Champion
that I just purchased today. While I originally went to get an old
Emerson radio, this was thrown in with the deal. Good shape. Looks
like, though certainly not sure, that with a new cord, and a string
for a volume pulley, that it might even work. Model number is S20R.
Has a metal case. Any info, history, and even a wild guess as to worth
would be greatly appreciated. Also, anyone know of a good source
of older microphones that would have been used with this radio?

Thanks,

John

I recently bought an Alinco DR610T and would like to use my headset microphone designed to be used with an Alinco/Yaesu/Icom HT. I've been told it's possible to make a circuit that will let it work with a mobile rig without completely tearing apart the mike. Has anyone built such a thing?

E-mail responses/copies appreciated, and I'll summarize responses if desired.

>Selling a transmitter to an UNLICENSED individual is
>simply WRONG. If a person is interested in becoming a ham
>he DOES not need a rig that will transmit. He needs nothing

Would you mind explaining, rationally, without resorting to ad hominem attacks, why it is wrong to sell a transceiver to an unlicensed individual? Neither the law nor morals is much based on need. I don't need a Porsche, in the strictest sense; that doesn't make it wrong for me to have one, or for someone to sell it to me.

I've already explained several legitimate reasons why an unlicensed person might want to buy a transceiver. The most basic are these: (1) the most common advice to people who want to learn code or other operating practices is to listen on the air, and (2) most new ham equipment is in the form of transceivers, not separate transmitter/receivers.

I bought a 2m HT before I received my license, so I could listen to the local repeaters and get used to the normal customs there. Why was it wrong for the dealer to sell it to me? Given that it's not wrong for me to listen to a repeater, why should I have to buy a scanner to do that, and pay almost as much as I'd pay for the HT?

Would like to informed all Kenwood TS-50 owners that Kenwood has
a minor hardware problem . The Problem is after normal installation
in a vehicle. That the ground connection point from the internal SO-259
connector to the Power Amp board will disconnect.

The fixed from Kenwood was to replace the solid piece of wire
and use a braided piece of wire.

What lead to this discovery was that my receiver was not hearing
the signal. I would slapped the radio and all was fine. So after digging
into the radio. I had noticed that the ground wire had broken at the
circuit board contact point.

While it is pointed out that alkalines that cost 50 cents and have 1400 mah and that Li metal hydrides cost about $4 to $5. However the Li metal hydrides are rechargeable over 500 times that makes the LmH about 1 cent per 1200 mah; that is 50 times the savings. If you are like me and take long backpacks with a very light solar setup on top of my pack, then it is even more odvious why I favor rechargeables. I rarely have a dead battery. 73s KD6RMD

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Hi!

I have an Icom IC-575A for sale.

Covers 26-55MHz continuous TX & RX. Has 100mems, DDS, PBT, inbuilt
mains supply. Is in E.C. Comes with original packaging, accessories
and service manual.

AUD$1500.00

Must sell to fund other ham purchases.

Bill - I hope the following will help :

1. There are probably a dozen different brands of UHF duplexers available. My experience has been that you basically get what you pay for.

2. The primary type of duplexer that is used for mobile service is the "Notch/Band -Reject" type due to its small size and relativlty good isolation between the transmitter and the reciever.

3. Numerous books and magazine articles have been written about tuning duplexers, and somewhere I have a copy of one that is very good written by a fellow out in Arizona (I think). When I find it I will send you the name and where you can get a copy. This particluar book is very staright forward on how to tune the various types of duplexers.

4. If you are interested, I have some Motorola Model TFE-6030 UHF mobile duplexers that were removed from service on mobile phones. They have 4 cavities and are rated for 20 watts continous duty. The price is $50.00 each and this includes detailed instructions on how to tune the duplexer using a signal generator, receiver, wattmeter and UHF portable. Or for $30.00 extra, I'll tune the duplexer to your frequency.

5. Just out of curiosity, what are you going to set up that is mobile duplex?

If I can be of any further help, e-mail me at brinkley@ols.net

>range of QRP, or is it always at 100watts output?

Yes. Look at the upper left knob set. The chrome/silver, outter knob is labeled "CAR." This controls the drive/power out. If you switch the meter switch to PWR, you can watch the pwr out go up and down as you adjust the CAR knob. Make sure that you don't increase the carrier out to the point of overloading the ALC capability in the unit. You check this by putting the meter switch in the ALC position. If I want max power out, I adjust the CAR knob to just below the point where the ALC circuit starts to kick. If you then check the PWR setting, you'll see it's about 100 watts. For lower levels, the ALC is not operative. So, put the meter on PWR and adjust to the level you want. Remember, the meter is approximate, not dead accurate. Hope this helps.

>
>My question is: is it normal to have to reverse the keying lines, or is something wacky with the MFJ?

Grid block key lines are negative, so naturally wiring has to be reversed if you're keying a positive line. The fundamental problem, with Icoms at least (your Kenwood may be similar), is that they want to see a really really low low on their keying line, IE less than 0.2 volt to common. An ordinary bipolar keying transistor or open collector TTL gate is only going to provide a 0.6 to 0.8 volt to common. This is because of the intrinsic diode drop in the transistor. That won't key the Icom reliably. In TNCs, the solution is to use a VMOS FET as the keying transistor, at saturation it has less than a 0.2 volt drop to common. In older circuits, a keying relay is used. In the grid block keying circuit, the diode drop works for you when wired backwards, and will give a keying potential of -0.6 volts (relative) to rig common, which will work on a low current line (less than 1 mA), though it violates design rules. (You could have troubles with power supply common for the rig and keyer.)

This is all rather Mickey Mouse, and use of a keying relay, a reed relay will easily keep up with your keying speed, is probably a more universal and better design. It doesn't care about keying voltage polarity, and it'll give a nice solid low. You'll wear out your key before you wear out the relay.

This is typical of the muddled thinking promoted by our
school systems. We all own the spectrum, under the doctrine
of the Common Heritage of Mankind (the basis of all commons
management law). We grant the government the *privilege* of
managing that commons for us, and allow them to limit our access
to our property right in the commons in order to satisfy the public
interest in order and public safety. Never forget who's the master
and who's the servant here. The government can't grant us a right
we don't already hold since rights are inherent and inalienable.
They can only infringe rights by consent or by force.

Our licenses are merely a promise by the government that they
won't use force against us for exercising our inherent property
right in the commons in certain ways.

A course on the basis for the legitimacy of government power
should be required of all citizens. When we fail to recognize
the proper hierarchy of roles, we can be fooled into allowing
tyranny free rein.

>
>it seems to me that the AF transistors are displaying a symptom and
>possibly not the cause am I right.

If the AF output transistors are getting very hot, that's a sign of a severe problem. The most likely cause is that the transistors are shorted, probably as a result of a previous short or open in the speaker circuit, or because of a power surge. It is also possible that they are being driven into saturation by a component failure in their input bias circuit, or that there is a short in the output circuit. The latter could be a defect in the headphone jack.

The first thing I'd do is check the transistors. The second thing would be to measure static operating voltages at the transistor terminals in order to determine if the fault is the result of an input bias problem or an output short. At that point you're down to the component level and can replace the defective part(s).

If the AF stage is all that's fried, this is a rather no-brainer repair. However, if the problem is the result of a power surge, there could be other things wrong as well. That could be a nasty, and expensive, repair.

The prices just keep falling. That last price came from a
end of season sale flyer. It pays to shop around, and watch
the sale flyers. I've seen the unit priced everywhere between
$299 and $179 at various places and various times. From what
I've heard, the Garmin 45 is being discontinued for a new
model, so clearance sales are occurring.

scott i have used the r5, r7 and hf-6vx. all three are good antennas. comments:

1. if you have lots of gnd radials i suggest the hf-6v.

2. if you don't care about 40m operation and don't have radials use

the r5. the r7 like the r5 works well with poor gnd - - but it slightly

reduces the 20,17,15,12 and 10m bandwidths relative to the r5.

The PLL unlock is caused by RF getting back into the unit. It almost never happens unless you use the duck and external power (or a 12V pack). You do not have to return the unit for service when you get the error...simply reset it.

To prevent the problem, use an off-unit antenna when you use the radio from external power.

2070. handheld, fast DTMF speed, 9600bps data port

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-16 00:00:00 UTC
From: crum@xmission.xmission.com
Message-ID: <43fmhv$q0o@news.xmission.com>
Source record: 212358

Hi, does anyone know of any VHF/UHF HT radios besides the Alinco DJ-580T that can send DTMF tones _really_ fast? Thanks for any info!

The Alinco DJ-580T has an undocumented feature that allows the DTMF sending speed to be set, over a wide range (16 different settings). You do F-FL/PL, then # 1 2 3 to change to the next slower DTMF sending speed. Speed 5 is the fastest speed that can be decoded by my Standard C5718DA radio, and that speed is too fast to dial a phone number with. I think I can dial phone numbers with speed 6 or 7, though, which is faster than the default speed (which is "A", if I remember correctly).

I ask if any other radios can send DTMF tones fast, because I lost my Alinco HT earlier today while hiking. Rats! I am wondering what model of radio to replace it with. The DTMF sending speed is actually a major factor to me, believe it or not. I like to use DTMF paging, on the wide-area 449.1 repeater hear in Salt Lake County, Utah. It works great!

I also wish there were a handheld transceiver that had a 9600bps G3RUH-type packet radio port -- one that I could use without having to modify a radio. There are mobile radios with 9600bps data ports, so I sure hope that a handheld comes out with this feature soon. I tried to modify a Radio Shack HTX-404 for data use a few times, but never got it to work. I need a better soldering iron, I think. I got TX and RX to work at different times but not together, and my poor soldering damaged the radio a couple of times.

Best Regards!

2075. Looking for i-phone equipped ham in Midwest to broadcast 3898kc swap

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-16 00:00:00 UTC
From: willhelm@ix.netcom.com
Message-ID: <43du24$d64@ixnews3.ix.netcom.com>
Source record: 212363

Hello, Bill here in Las Vegas, Nv. I am looking for a Midwestern ham who has i-phone capability that would be willing to monitor and rebroadcast (in real time) the 3898 kc Monday and Friday night swap meet on his internet phone connection for others here on the West coast to listen to. In exchange for this effort i would be happy to do the same thing with the Saturday and Sunday west coast trader net that starts at 12:30 pacific time on 7240 kc. The west coast net has been in operation for over 15 years now and has several hundred check-ins every weekend with buy,sell and trade ham items. The midwestern net usually starts (or used to) about 6 to 6:30 pm CST. By the time the band opens here to the west coast in the evening the net is usually over. If your an i-phone equipped midwestern ham who is interested in this activity i would like to hear from you. It is perfectly legal and you might find that bargain you have been looking for on the other side of the country listed on our swap net.....

Thanks in advance, and lets hear from someone about this idea !!

Bill Dillstrom -- KA0SCM/7 -- Las Vegas, Nevada

Incrediably durable 14 volt @ 100 amp or 28 volt at 50 amp DC power supplies. Extremely accurate voltage and current meters. Output voltage is variable.

Have 2 that I bought 1 1/2 years ago and haven't had a chance to put them to use. Now I'm moving and can't take them with me.

Both are still boxed and ready to shipped to you.

I'll let them both go at $900 + shipping, or each for $500 + shipping.
Weight: 160 pounds each.

E-mail at Esprit@ix.netcom.com or call 708-584-6152 (Chicago, IL)

I have often wondered why keyer manufacturers go to great extremes
to provide all those different output connections, along with
sometimes complex instructions defining how to hook this to that.
IMHO, a cheap, fast relay would provide a universal solution.
I know of no rig that will not respond correctly to a contact
closure on the keying line. Maybe the transistors are cheaper
than a relay, but all other things considered, the relay may be
cheaper than all the other support stuff.

What a tangled web we weave sometimes when we forget the KISS
principle.

2089. Re: RF output on TS-440S?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-17 00:00:00 UTC
From: "Gary KF9CM"
Message-ID: <43fv59$t19@sake.wwa.com>
Source record: 212377

AS AN OPERATOR OF THE KENWOOD TS440S HF TRANSCEIVER, I HAVE FOUND
THAT CONTROL OF THE SSB POWER FROM THE FRONT PANEL WOULD
SIMPLIFY THE OPERATION OF THE TRANSCEIVER. THEREFORE, I HAVE
DESIGNED AND INSTALLED A MODIFICATION ON MY RIG
AND WOULD LIKE TO SHARE THIS IMPROVEMENT WITH OTHER OWNERS OF
THIS PIECE OF GEAR. ON THE FOLLOWING IS A DETAILED DESCRIPTION OF
THAT MODIFICATION.

KENWOOD TS-440S SSB CONTROL
WITH THE FRONT PANEL CARRIER CONTROL KNOB

THE KENWOOD TS440S HF TRANSCEIVER IS PROBABLY ONE
OF THE BEST ALL AROUND RIGS FOR MOBILE OR PORTABLE
OPERATION, AS WELL AS A GREAT BASE RIG. WHILE THE
KENWOOD TS 440S IS A GREAT LITTLE RIG, IT DOES LACK
A FEW OF THE IMPROVEMENTS THAT THE ARE STANDARD IN
THE OTHER RIGS. ONE SUCH IMPROVEMENT IS CONTROL OF
THE SSB OUTPUT FROM THE FRONT PANEL. BEFORE THIS
MODIFICATION THE ONLY WAY TO ADJUST THE SSB OUTPUT
WITH OUT AN EXTERNAL CIRCUIT WAS TO DISASSEMBLE
THE BOTTOM HALF OF THE CASE AND ADJUST VR1 (ALC).

ALTHOUGH THIS IS A VERY SIMPLE MODIFICATION IF YOU ARE
NOT COMFORTABLE AT WORKING ON ELECTRONIC CIRCUITS DO
NOT ATTEMPT THIS MODIFICATION.

THIS MODIFICATION INVOLVES JUMPERING THE CATHODE OF D48
TO THE ANODE OF D51 ON THE IF BOARD.

1. REMOVE TOP COVER EXPOSING THE I.F. BOARD

2. LOCATE J28. IT IS A TWO (2) PRONG PLUG VECTORED
APPROXIMATELY 2 INCHES FROM THE BACK OF THE I.F.
BOARD AND IN THE CENTER OF THE BOARD. D48 IS
LOCATED JUST TO THE RIGHT OF PLUG J28.

3. NOW LOCATE J19. IT IS VECTORED APPROXIMATELY TWO (2)
INCHES FROM THE FRONT AND IN THE CENTER OF THE BOARD.
D51 IS LOCATED IN BACK OF PIN #8 COUNTING FROM THE LEFT.

4. PREPARE A FIVE INCH PIECE OF #22 HOOKUP WIRE BY STRIPPING
AND TINNING THE ENDS OF THE WIRE APPROXIMATELY ONE FORTH
OF AN INCH ON ONE END, ONE EIGHT OF INCH ON THE OTHER.

5. CAREFULLY APPLY SOLDER TO THE TOP OF D51.

6. CAREFULLY SOLDER THE ONE EIGHTH INCH END OF THE PREPARED WIRE TO TOP OF D51.

7. GENTLY FORCE THE OTHER END OF THE WIRE INTO THE TOP OF PIN #1 OF J28. PIN #1 IS THE ONE ON THE LEFT OF THE PLUG.

8. REASSEMBLE THE COVER.

WITH THIS MODIFICATION YOU CAN SOLDER THE WIRE TO THE FOILS ON THE BOTTOM OF THE I.F. BOARD, BUT IT REQUIRES UNPLUGING ALLOT OF PLUGS FROM THE I.F. BOARD.

WARNING: ALTHOUGH THE SWR PROTECTION CIRCUIT IS STILL IN PLACE, THIS MODIFICATION CAN PRODUCE POWER OUTPUTS THAT CAN EXCEED 180 WATTS AND DAMAGE THE FINAL TRANSISTORS SO BE CAREFUL!

2091. RS HTX-202 Warning!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-17 00:00:00 UTC
From: ag001@lafn.org
Message-ID: <1995Sep17.013035.17282@lafn.org>
Source record: 212379

Radio Shack should include this warning with the very poor instruction book they include with their HTX-202, which I understand is mfg. for them by Icom in Korea: never plug your 202 into the cigar lighter with your 12-volt+ battery UNLESS you're using an external antenna (like a mag-mount). If you use the rubber duckie, the 5+ watts of RF you generate feed back into the set, causing the PLL to unlock, thereby rendering your HT useless until repaired. I've gotten so cautious I won't even use the HT inside the car with the NiCad, because the metal and windshield might cause same problem.

If anyone knows a way around this, or how ro reset the PLL once unlocked, I'd be very grateful to hear from them.

: KE6OCM

The problem you describe is not a problem with the radio, but rather
the way it is in operation. When attached to the 12 vdc and using a
rubber duck antenna, the RF from the antenna is being jammed right back
into the radio thru the unshielded 12 vdc line.

If you are running as a mobile, the grounded coax line to the antenna
provides a more than ample isolation. You mentioned a mag-mount....
These are ungrounded antennae. RF may still be floating around.

Suggestions:
Run a truly grounded mobile antenna.
Run a grounded shielded 12 vdc line to your HT.
Use a 12 vdc battery pack on the bottom of your HT and
eliminate your exposed DC line.

Hope this helps ..... -= 73 =- john k3nxu jlamar@yrkpa.kias.com

The folks at the Atlas booth told me that the radio was being redesigned with surface mount technology (if that's good!) so perhaps the design won't be so out of date. I'm not a foaming-at-the-mouth nationalist, but it *would* be nice to see another US produced piece of amateur equipment.

: The proper place for all such ads is Rec.Radio.Swap.

: If you insist on placing ads in this group, be prepared for e-mail from many readers intent on making you aware of your error.

Maybe it's time to do one of two things:

1) Change the name of rec.radio.swap to rec.radio.forsale, which is more in conformance with the naming conventions that are widespead over the 'Net.

2) Leave rec.radio.swap as a global swapmeet, and create the new group rec.radio.forsale.

Neither approach is 100% reliable, however. There will always be spammers and clueless newbies.

So, what does everyone think of this proposal?

On a personal note, I don't mind that much if ads are posted here, as long as they are *strictly* related to amateur radio. Some folks (no flame intended) really get offended about the ads, but I don't consider them any more of a breach of netiquette or the charter than I consider driving 70 mph on the freeway to be a major breach of the law. Often, this is the first place that I hear of a new product or a new version of a CD-ROM.

The following is excerpted from the charter:

"The swap group is rec.radio.swap. ... If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; ...

.. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for."

Just wanted to clear that up. ;)

The Radio Shack SWR/ Poer meters are often not as good as you might think.
The SWR meter that I purchased for 10 meter did not truthfully tell me my
reading. And It is definetly not worth 46 dollars.

I am soon to upgrade my license to Technician No-code so that I can use that 2 meter band. I am also a member of the local Civil Air Patrol and our Wing (State-wide) Communications Network frequency is just over 2 meter (148.150) and I was wondering if there were radios available that would allow that extra step. If so, how much would one cost.

I know that there are antennas that will go there and I know where to get one. I just need to find the radio.

Note - I am not looking to buy one now. My new classes will start in January and end in June. I might buy a radio after I get my new license.

I saw the real think at HRO in Sunnyvale, CA on Saturday and I think that you got the price about right. As you say on the WWW, it is definitely "cool". I currently own a 3 month old TS-450S and was scheming on the way out how I might trade up to a TS-870 before my good sense (and checkbook) got the better of me! Being a TS-450S owner, I'm blown away by the larger packaging of the rig and the usability of the displays. It also has on-board DSP and an electronic keyer. Finally, it comes with a Windows program that allows you to put a customized picture of the front panel of the rig on your PC screen and point/click to run the rig.

Very nice ... but I'm in the market to buy a linear amplifier so until then,
I'll just wait ...

Bruce Tenison (Btenison@cris.com) wrote:

: At this point, we don't have a lot of money to spend on a controller, but
: have been looking at a controller marketed by Micro Computer Concepts in
: New Port Richey, Florida. It's called the RC-1000.

I bought an RC-1000 almost a year ago. It was clumsy to
set up, and other than crashing its software twice and
having to reset the thing twice in the process, it has
worked flawlessly since then. It has very few bells and
whistles, and that is probably good for a first timer.
One feature that I really like is that a user can enter a
code which takes it out of PL until 30 seconds of no
activity. Neat.

If I were doing it again though, I would by an RC-100, or
better yet, I would get a real controller like an S-Com
or a LinkCom. This may be flame bait, but it really
ticks me off that the folks at MCC advertise this thing
as having a proper phone patch interface, but fail to
mention (until you buy the thing) that it isn't Part 68
registered. Sure, it looks like it has been done okay,
but it's not kosher to hook it up to the phone line.
Arrrrrrgh!

Unless this is a hokey one man band of a repeater (like
mine is), spend a few extra bucks and do it right the
first time. I will!

Cheers -- Mark

> Can someone recommend by manufacturer, a mobile duplexer
> for the uhf band. and how and what equipment is needed to "tune"
> them?

Bill -

I have just installed a Sinclabs duplexer (1.2GHz) in a repeater, and am quite impressed by the duplexer and the company. Sinclabs is the amateur radio division of Sinclair Radio. Phone: 800/288-2763.

They have a 440 duplexer which uses the same components as the 1.2G duplexer, but use the cavities at 1/4-wave instead of 3/4-wave resonance. It is roughly 12"W, 15"H, and 3"D, which are certainly dimensions which would lend itself to easy mobile use. It's not cheap - no real duplexers are. The 1.2G version was $540, though they do offer substantial (25%) discounts to amateur radio clubs.

To tune duplexers correctly takes patience, knowledge - and a spectrum analyzer/sweep generator. It's not something I'd want to consider doing in the field, and that's provided I had ready access to an analyzer. Duplexers usually come from they factory tuned to your application, and I, for one, am glad they do.

I want to build a simple audio amplifier to put between the rcv output from the back of my IC751a, going to the audio input to my TNC (a HAL P38). The audio output from the 751 is abt 300 mv peak to peak which isn't quite enough to drive the tnc to full levels for receive. I'd like to get it up to about 1-2 volts P to P. Anyone know of a simple article in QST maybe for just such an application? Any info is appreciated. (I could take it off the MIC connector, but I'm trying to keep that open).
Thanks and 73's to all, Mike KS4DA

>
>73,
>Don W3FPR

Hi Don,

I'm sure the device choice is cost driven. Small reed relays cost a buck
or so, and FET's or bi-polars cost a few pennies and last longer. But
using a FET or bipolar to key a radio only seems to cause very rare
problems. The most likely cause is the 422B keyer is probably defective. I
would call the manufacturer, since they probably know a lot more about the
likely problems.

The MFJ 422 I have uses a MPSA-42 (bipolar) in the direct output. That
device has an on saturation CE voltage *maximum* of 1/2 volt. That does
not seem to be excessively high. It works flawlessly with my 751A, Yeasu
rigs, and a Kenwood 450. Just to check it out, I added a rectifier diode
in series with the keyer and it still works fine with all the rigs! Gosh,
maybe the 422 the original author has is defective and we are trying to
re-engineer something that has a bad solder joint?????

Anyway, if we really wanted to correct the problem, all lines on radios
should have established design criteria. Having a keying line that
requires being pulled below a volt or two is poor engineering. It makes
the line more subject to RFI or ground loop hum problems, and forces the
user to limit interface circuitry. It would be much better to have all
control lines designed to TTL logic low level standards.
73 Tom

Nothing is standardized in radios, and it even varies between different
radios made by the same company. That gives me fits in my station when I
want to change from one radio to another quickly. ALC, relay outputs, mic

levels, key line voltages, and everything else all vary.

2124. tuning up a kenwood ts520

The rx in my TS 520 seems a bit lacklustre these days - Note the rig has
followed me back and forth across the atlantic and is some 14-15 years old
- sooooo�? I was thinking it may be time for a quick tune up.

The manual indicates that this can be easily achieved using the internal
25kHz marker as a signal generator - somehow I am a little nervous.

Does anyone have any pearls of wisdom to share on the subject.

73's and thanks in advance.

Simon
VE7AED

ps I love the rig.

Source record: 212265

I was talking to Mr. Rhodes (KE2WEU) of Rhode and Shwartz and QST fame last saturday night on 40 meters. He said that Kenwood loaned him two 870's to test. He said that the radio is the best he's seen to date on both receive and transmit features. It beats out the FT-1000D, IC-781, and TS-950SDX in terms of performance. It does not appear that Kenwood will replace the 950SDX because they've been losing too much money on these high-end radios. As far as the FT-1000MP is concerned, he said that he does not understand why Yaesu went with mechanical filters because these filters inherently produce undesireable intermod problems. By the way, Kenwood did incorporate some of his features that were published in QST.

: tech license, a few code tapes...

Nonsense. Doing so is neither illegal nor morally wrong.

As one strictly opposed to "possession laws", I cannot find any
compelling reason to restrict ownership of any material object. Mere
possession of an object doesn't do harm. It is the use of the object
that is potentially dangerous and/or illegal.

Better not sell me a car because I might use it to break the speed limit...

I bought a 2-meter transceiver myself before I was licensed. All I did
was listen. What could possibly be wrong with this? I would have
broken the law had I transmitted, but I didn't, and no one was
harmed. Besides, having spent money for the radio gave me incentive to
keep studying for my license.

I have never had this problem with any name brand amateur HT. Have run
Icoms, and Yaesus direct off the battery, using the rubber duck, and
have never had it cause a problem with the PLL. I don't think it is a
problem with the way the radio is operated, but rather the poor design
and construction of the radio that would allow this condition to

happen.

2129. VHF Linear Amp For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-18 00:00:00 UTC
From: kmallen@prysm.com
Message-ID: <43kpnf$3g9@news.unicomp.net>
Source record: 212269

I have a "Tempo 6N2" linear amplifier that I would like to sell.
It will handle a Kilowatt on 2-meters as well as 6-meters for
continous SSB operations. For FM it will deliver a few DB's less at
intermittent duty. The amp is in very good condition and almost looks
like a new one. I have the documentation for it.

If you are interested in purchasing this from me or if you want more
info just send me email. I have no idea what it should be worth on the
market so I am soliciting offers.

This amp is located in Shreveport, LA. It is approximately the size of
a cube which is 15" on all sides and operates either from 120vac or
220vac. It is heavy and would be difficult to pack for safe shipment.
However, I will be driving from Shreveport to Savanah, GA along U.S.
hwy-80 and I-20 in a few weeks so if anyone is near this route, it
would be very convenient to arrange delivery. My Amateur callsign is
"K5HR" and my info is correct in the Callbook.

>P.S. I was going to get one of these for my wife.

Line of site to a repeater is usually about 30 miles or so, on flat
ground. Line of site to another HT on level ground could be as little
as 1/2 mile or as far as 7 miles, totally terrain dependant.

The real power of 2m are the repeaters. It extends your range tremendously..

Mobile 50 watt units can do better than the 7 watt HT. Maybe 50 miles
or more into a repeater.

Range? Well, my HTX-202 has transmitted clearly to a repeater on a
mountain top sixty miles away. Made a successful contact with the MIR
space station using packet and it was 280 miles up.

Its a good unit, but do buy the $40 five year warranty. You'll need it.

2133. How do I fix DTMF Microphone button?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-18 00:00:00 UTC
From: dmarra@fast.net
Message-ID: <dmarra-1809952026370001@dmarra.fast.net>
Source record: 212273

Hi All--

One of the buttons on the microphone that came with my FT-5100 mobile radio does not function. It is the button that switches from the Memory to the VFO (therefore it has been heavily used!)

I took apart the microphone and cleaned behind the keypad membrane where it makes contact with the switching circuit. It still does not work!

Does anyone have any experience with this kind of problem? Is it possible that the problem might be more than just dirty contacts? I was thinking about gluing a very small piece of foil to the back of the button membrane to increase conductivity...would that work???

Thanks in advance!

>Fair Radio Sales in Lima, OH, should have a tech/users manual and
>possibly the batteries and a mike for it. Phone: 419-223-2196.

They have photocopies of the service manual, and they had batteries
the last time I looked. I bought a battery from them for my PRC-10 (a
similar radio which covers about 38-54 MHz), but it was badly corroded
and almost dead. A dead battery is still useful, though, because you
can salvage the connector and use it to make your own battery
pack. Fair Radio has a book which describes how to make battery packs
for a lot of old military radios, including the PRC-8, -9 and -10. As
I recall, your radio needs the following voltages: +135, +67.5, +1.5,
-6.

Another option is to get your hands on an AM-598, which will let you
run your radio from 24 volts DC. It's a box about 1 foot on each side;
the radio mounts on top (without its battery box).

Please be aware that the PRC-9 is a wideband FM set; its nominal
deviation is about 15 kHz or so; I'm not positive about this, but I
don't think that wideband FM sets fall within the requirements for
amateur radio transmitters in the US. Can anybody shed some more light
on this?

I believe the Yaesu FT-33R is still available from AES. I bought mine
from HRO years ago and I think it was less than $350 back then. The
batteries for it are still available (it uses the same packs as the
FT-411 and FT-470) and has 10 memories. However, it does not come with
CTCSS decode nor DTMF encode (both are optional accessories). It may
not be inexpensive after everyone is said and done but it is a rugged
HT.

: it must be available for downloading from the bbs somewhere. Which
: discussion group does it belong to instead ?

Actually, the original poster is quite correct. Any valid newsgroup other than those in the alt.* heirarchy had charters approved when the newsgroup was first created. In this particular case, the group was supposed to be limited to discussions directly related to the operation and/or discusions about radio equipment.

Rec.radio.amateur.misc would be a more appropriate forum. You might also want to browse news.answers, which tells all about news group conventions, and might save you from making statements you'll have to retract later.

Sorry, but others of us have run the HTX-202 off the cigarette lighter plug without suffering the problem you have. My partner consistently runs his HTX-202 off the plug in the ambulance in which we work, and has never had the PLL unlock problem.

> I've gotten so

Now, THAT sounds like paranoia instead of prudence. If you're having problems with the PLL on your HT unlocking, return it if it's under warranty.

i was in the habit of taking the battery pack off when operating with external DC,
because i measured whatever voltage was going in the top, coming out the bottom.
Is there a diode in the nicad battery to prevent overcharging the battery with external
DC going in the top?

Yes it would. It's not too complicated and not being broadband it has good
intermod resistance which is nice in the city. Be sure to get the extended
maintenance coverage, they will fix it even if you drop it out a window.
It should make repeaters up to 15 miles or so away. If you are on a hill
top the range is much greater. They are like Craftsman tools, the quality
may not be the world's best but the price is right and you can't beat the
warrenty.
I'm not prejudiced because I don't own one. I have an Alinco.
I just think they are a good deal.

If I had to do it over again, I'd get the 51r. I have the Z1A, and find the electronic volume control is a real pain to operate, & the receive audio quality (even with an external speaker) is poor compared to other HT's I've owned/used. On the plus side, it is excellent at intermod rejection, very easy to program & use, & the large display & buttons are excellent for big fat fingers compared to other small HTs.

All,

Another religious question, but I'm curious anyway.

It seems there are two schools of thought on the topic. One says always do it with a spectrun/tracking analyzer/tracking generator, the other says use a watt meter and signal source at the installation source and tune for max power on pass and min signal on notch.

It seems this discussion can get very religious, but what the heck.

I for one favor the analyzer approach, as touchy as the new small cans are these days I would not want to try the other approach, but the advocates there claim that you have to have the actual load to really tune the cans correctly.

Any takers?

I have used my HT-202 and other HTs in several types of cars, several times and have not had any problem. I have used both the nicads and the external power cord. I often do this in my truck when I don't want to bother taking the mobile out of the car. Works fine with the HT antenna.

To reset the PLL just turn off the radio and turn it back on while you hold the function key down. Then just reprogram the unit.

But, running an external antenna is a good idea when using external power. It is a lot easier on the finals if they have a good rf match and it gets your head away from a much higher level of rf than if you were just using the nicads. Not to mention about a 10 times improvement on your range.

The HTX-202 allows you to run more power than any other HT. At 13.8v
and a 1/4 wave ant. it can run 7-9 watts. Trying to run this much
power into a rubber ducky damages the radio. The HTX-202 shouldn't
be damaged when someone does this, but then no other HT offers as
much power output. Just "don't do that", and all is okay.

I owned both... I just sold my Kenwood & bought the Yaesu FT51R...
I prefer the Yaesu because it has more programmability with the features, scan types, and such.
The Kenwood is easier to operate, however, and it is a great radio in itself.
The gentleman who bought mine says that it's the best HT he's ever owned. I say the same about my FT51R... I boils down to opinion.
The Yaesu is capable of being programmed from a desktop computer, though, which I find neat.

I have 3 202's. One is one of the very first produced, about 3 years old. I have used it for packet, 12 with duck, external antenna, bad antenna, outside, in rain, in my office next to my computer and all kinds of things, and never had a problem with it.

I got my wife one about 2 years ago, she uses it with a 12v adaptor, and sometimes the duck, and sometimes and outside antenna, never had a problem with that one either. BTW neither of us has ever bothered to take off the battery pack when running with external power.

I also have one I picked up about 18 months ago for $25. It seems the chap had dropped it in the flood waters, and didn't have the extended warrenty which would have replaced it. He took it apart, dried it out, and said all it would do it give and er message. I gave him $25 for it at a sidewalk sale in peices, put it back together, read the manual, found out how to reset the er code, and it works perfect, and I have had no problem with it either. It gets beach duty when I go to the beach and use a 12v weedeater battery with the duck.

When I first got it I would often tell people I was running a Yeacomwood or something, and would always get excellent reports, especially about the audio. After I would tell them I was switching to the RS to see how it sounded I almost always got a less favorable report, such as distortion in the audio, white noise, off frequency etc. All with the same radio.

Try it for yourself, use the same radio, tell the guy on the other end you want to compare the RS with xxxxx, you will almost always get a better report on the xxxxx signal.

Glenn,
Glad to hear another favorable 202 review. I've had mine almost a
year with NO troubles at all so far. Very sturdy rig also. I love mine.
what I like to do is when someone asks me what rig I'm using I first ask
them "how does it sound?" They always say great in all respects...then I

tell them it's the 202! quite a few folks in my area use them and also like them.

2164. 751 Service Manual

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-19 00:00:00 UTC
From: robertov@hqlab.ico.olivetti.com
Message-ID: <43mh14$1hq@sfgw.ICO.Olivetti.Com>
Source record: 212221

Hi to all,
i am looking for the service manual of IC751
note not 751A but 751 here in italy the company
that sell icom equipment DOES NOT HAVE it and
any effort to find it at the moment is null
so i am posting it here hopping that someone
can give an help hand.

I see some solution at the problem :

1. someone can check with ICOM USA if it is available
(at least a xerox of it), and/or supply addr of ICOM USA.

2. someone can ship it to me and I will xerox it
then send it back the day after. (I will return any shipment cost)

3. any other good idea are welcome.

Note the 751 main board if pretty different from the 751A
and the sevice manual of 751A that i have (xerox) is not
good to make allineament and fix of the rtx.

If you think you can help me on fixing this rtx (not very
good modulation in SSB) please contact me, i do not want
to bore all the people with my story.

please respond using email if possible at

robertov@hqlab.ico.olivetti.com

thank anybody for the time

Roberto

Point well taken. Maybe an automatic reminder to the group once a month would be
sufficient. Otherwise there will be those out there that will flame the first
poor sole that posts for sale. I guess that way, it would keep traffic like
this posting to a minmum.
I do however feel that the amount of postings so far to this group are
a minimum, and to me it's not a bother.
Of course, that's just my point of view.

I owned an HF rig and a 70cm HT **before** I got my license, and would
do it pretty much the same way again.

As you stated, why in the world would I want to buy ***just a
receiver*** for very much the same price as a transceiver? The answer
is that I wouldn't.

I suspect that these "HAMs" only types are probably the same types of
people that think that if you can't do CW you are not a "real HAM",
conveniently forgetting that there is so much more to HAM than just
CW.

But, let them continue, and if they stay in business, I'll be
surprised.

That must be the 'plexer I bought last summer- really melted the hell out of the teflon insulator! This is probably why there is a sticker on most cans saying !!WARNING!! do not tune with "REAL" power.

>
> It seems this discussion can get very religious, but what the heck.
>
> I for one favor the analyzer approach, as touchy as the new small cans are
> these days I would not want to try the other approach, but the advocates there
> claim that you have to have the actual load to really tune the cans correctly.

For notch only type 'plexers, a signal generator (a few microvolts, NOT 100 frickin' watts), and a receiver does as well as anything (maybe a couple of 3db pads or the alike to match the generator to the can and the can to the receiver).

For the commercial people, notch plexers give 0.5 or so uv sensitivity for 12db SINAD, and only take their 100 watt transmitter down to 60-65 watts, so they are happy.

For us "amateurs" who want 12db at 0.15uv, and want to see 80 or more watts of our PA's 100 at the antenna, need pass/reject cans- which is where the tuning need is critical.

From experience, and testimonials from hams and commercial techs there are two effective methods to tuning pass type cavity filters: 1. The conventional analyzer with tracking generator method, or 2. A cheaper narrow band method that for some reason few utilize.

By far the easiest, most effective, and yes the cheapest when buying equipment way to tune pass cavities is with a return loss bridge. Eagle's device detects very small changes in return loss (a.k.a. SWR) therby alerting the operator to the peak pass point (min. SWR) for a device within a very small error. Typically a 10 degree movement in a threaded tuning rod exhibits a detectable change in return loss, where the "tune for maximum pass" school can only offer 30-90 degree (or worse!) turns in the rod for visible change in the output level.

Yes, this is for the truly finicky- but when results count......

For equipment, all one needs is 1)signal generator capable of a couple of microvolts (-100dbm or so) 2)a narrow-band receiver for each pass frequency, with some sort of signal reading (s-meter, or better yet a Sinad meter) 3)a precision 50 ohm load (no Radio Shack junk here), 4)Cables, 5)Return loss bridge. Not that I make any money... but Eagle's device is quite good for $350 or so you get coverage from 1Mhz-1Ghz.

Much better than the never-found "holy grail" of a DC-1G HP analyzer at a hamfest (working!) for $350 (not to mention the need for a tracking gen).

Simon,
If you send me an address I'll send you a xerox of the
rec tune up section from the service manual. My 520 was
getting weak in the ears. I ckecked the voltage on the transistors
(easy to do, lots of room) and found a transistor with low
voltage. Cut it out, replaced it with a Radio Shack one, and
all was well! Great rig.

2177. Need your input for Surplus Land Mobile Radio FAQ

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-19 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <43n25h$g8u@mrnews.mro.dec.com>
Source record: 212284
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

What the heck, let's make it official:
I'm willing to compile a FAQ, all about those surplus police and taxicab radios and converting them for ham-band use... you know, the ones you always hear on the air 'cuz somebody converted one: Motorola Mitrek, GE Master II, Phoenix, Delta, blah, blah, blah. There's dozens of these things available for cheap money, and I'm sure a lot of us would like to know which ones to look for, and which to skip over, as their performance often beats the imported synthesized rigs!

In particular, what I want to get is information on how to identify the particular models, what band they're on, crystal or synth, whether they're an easy conversion, need a fair amount of work and skill, or are impossible, and how to tell all of this by looking at them and reading the model/serial numbers. Also, it'd be good to know if a full manual with schematics and tune-up procedure is available, from either the manufacturer or a Sam's photofact type publication.

I don't really want to start a database of HOW to do the mods. That would be difficult without graphics, and would occupy megabytes! This should be fairly easy to deduce from the tune-up procedure and other details in the manual.

WHY do this?
1) I'm interested - I've passed over a lot of these at fleas, for lack of any information about what I was looking at.
2) It doesn't seem to exist anywhere else. A lot of hams have some knowledge about some radios, no one has written it all up.
3) Put these radios back to work, and save them from the scrapyards!

So there it is... all info, pointers, literature references appreciated! Send to me at: randolph@est.enet.dec.com

-Tom R. N1OOQ randolph@est.enet.dec.com

Has anyone actually got their hands on one of these beasts yet? I am on the list at the local emporium, but it seems they won't be here until mid-October.

I got the impression from GJ4ICD's page that they were already available in Europe. Anyone over there confirm this? How about elsewhere in the world?

I'd be interested in hearing any comments about this unit before I take delivery.

No, the FT-470 uses an older battery design (FNB-17, I think) that is
shared with the FT-411 and FT-811 as well as even older Yaesu HTs. The
FT-530 is a more rounded design and they are not interchangeable.

From: awright@gate.net
Message-ID: <43lee7$mem@news.gate.net>
Source record: 212292

(1) Kenwood TS-520S, excellent condition, works fine. Comes with original PC-1 Patch controller, MIC-50 microphone, SP-520 external speaker (although the internal one works fine, too), all in great working order with manuals (even the PC-1!) Makes a great phone relay or field day machine - includes original 12-volt adapter harness. $375 negotiable, will consider partial cash/trades in exchange for (all working) VHF packet/microwave equipment, or even unusual stuff like radar guns, night vision goggles, computer equipment and the like. Purchase of Yaesu FT1000D forces sale.

All serious inquiries to: awright@gate.net or phone (941) 324-9624.

73,

Source record: 212293

The original poster is correct, Arthur. I agree that a lot of people don't know that rec.radio.swap is the correct place to post buying, selling, or trading articles for amateur radio and related equipment. However, this is the hierarchy that people voted to accept just last year. Until the newsgroup hierarchy is changed, it is incorrect to post FS/WTB messages to rec.radio.amateur.equipment.

This is, after all, what you all wanted.

I understand the confusion, however, and wish that we had put the swap newsgroup under rec.radio.amateur. New people come into USENET, see a rec.radio.amateur hierarchy, look for a for sale group, and don't find one. However, they see an "equipment" newsgroup, look at it, see a couple of FS/WTB posts and naturally assume that it must be the correct place for FS/WTB posts. Why would they think otherwise?

Of course, people really should read the Guide to the Personal Radio Newsgroups before posting. However, this is only posted on the 15th of the month. If it was posted every week, maybe this would be less of a problem.

Just a thought.

Sort of. I think they are marketed in Europe but not the
USA. If you really want one credit cards often make international
mail order practical.

Ten Tec sells a 20 meter to 6 meter kit.

I plan to publish a 2M to 6 meter transverter design in QEX.
However, no circuit boards will be available unless someone
else designs them. After all, QEX is an experimenter's
exchange published by the ARRL. I think circuit boards
discourage experimentation.

>Brad WB8YGG

Hi Brad,

I think the problem may eventually come in the volume of for sale postings. That's why I never bother to download the radio.swap group, it's just too much stuff to sort through.

I see the potential problem "for sale posts" can cause here, and agree they should be discouraged. If the volume ever gets a tenth as high as on radio.swap this group will be useless. Why wait until it becomes a problem before controling it?

>the field, and that's provided I had ready access to an analyzer.
>Duplexers usually come from they factory tuned to your application, and I,
>for one, am glad they do.

Tuning can be such a chore without the right eqiupment. It can be
frustrating in all cases if you find out you have a broken ground
on a test cable.
Tuning of such filters i've found has never been easyer than with
a HP8753C/D. It's a microprocessor controlled network analyzer
which consists of a sythesized sweeper. That is the key to tuning
cavities, the ability to set a marker and know its on the right
frequency and will stay. In addition the ability to view return
loss and insertion loss simultaneously while sweeping thru both RX
and TX frequencies makes tuning easy enough for almost anyone.
But the 8753 is a bit overkill for that, with its vector functions.
Scalar only network analyzers are available for 1/4 the price.

Tom , I wondered if you tryed a microprocessor reset on the HT?
The HTX-202 has alot of RF floating around inside due to some marginal
shielding and they can be wacked out pretty easy.

>KE6OCM
>--
>pax vobiscum
If the PLL unlocks in the HTX-202 it should display a error code on
the LCD display. All that has to be done is turn the radio off or if it doesn't
clear a reset of the microprocessor should clear it up.
To do a reset turn off the radio,press and hold the function & clr key and
turn on the HT.All programed will be lost but it should clear the error out.

: James, KF4AQO

try this
ftp to oak.oakland.edu
I cant remember the directory, but it is under something like this.

cd pub\hamradio\mods\yaesu
after getting into the yaesu directory, type ls ft51* and you will see
about three files relating to yaesu ft51r mods. one will list for the
5100.. you can disregard.

Another option is to go to Yeasu over in cerritos CA. Ask for the
information on the keyboard entry adjustment to the mic deviation. They
will give you a copy of a few pages of information regarding a few things
that can be adjusted via keyboard entry. It looks interesting, but mine
works fabulous and I am not going to mod the thing. I do not need to
transmit out of band.

If I really wanted to do so, I would use a ft470 for that. Easy to mod,
and an overall fabulous radio. Yaesu provides fabulous customer service,
and that is the primary reason I made the purchase of my ft890, ft470,
and the ft57r along with lots of accessories. They are intelligent,
friendly, efficient, fair priced, and honost when it comes to service.
Not only that, but they are up front with mods, and information, and
technical stuff.

By the way.. if you don't need to transmit out of band.. don't do the
mod. There are no advantages... only disadvantages. You will suffer
slightly higher intermod, lower sensitivity/selectivity... etc. I will
un-mod mine next time I have it opened.

Just my $0.02 worth.
Dan

Hi Tom,

I'm with you 100 percent, I think the poor guy just had a bad component or
connection. I don't know why it was recommended he modify a perfectly
proper design instead of repairing the problem!

I wasn't going to say anything but I hated to see a huge technical
distortion ...errr, I mean discussion .... explaining why the transistor
output design could never work reliably when it obviously can and does. It
was kind'a like recommending someone with a flat tire re-design his car
and to eliminate the troublesome wheels!

Perhaps someone confused VBE (sat) and VCE (sat) and thinks the collector
can never go below .7 volts in a conventional bipolar silicon transistor.

Anyway, my 422 keyer uses a MPSA42 keying transistor. That device is
speced to have a worse case, worse device *MAXIMUM* of .5 volts VCE at 20
mA collector current (2 mA of base current), but the *TYPICAL* MPSA42 VCE
is 1/10th volt at 20 mA collector current!

I actually measured the closed key voltage across the direct output of my 422. My 422 pulls the ICOM key line to within .039 volts and the Kenwood line to within .057 volts of ground!!!!!! That sure seems low enough to me.

On a lighter note (get it?) I reworked the sidetone of my ICOM 751A, and moved the carrier offset on CW. I like a 400 to 500 Hz tone, not that squeeky nerve-grating tone they give you from the factory. It involved changing several resistors and capacitors and was a real chore. So I feel your side-tone pain.

CM>>There is no reason to take the battery off an HTX202 when operating
>>from a DC power source into the jack on top (by the ant. jack) The
>>radio will draw power from the source with the higher voltage.

Here's some User Notes on the HTX-202...

ALWAYS: Slide off your NiCad pack when using external DC power from your vehicle or a power supply! Leaving the pack on while mobile puts too much burden on the Zener diodes, and generates heat at twice the normal rate. Save your radio and take off the pack!

Unlike it's Icom brother, the 202 will not top charge an Icom pack while on external DC power. Refer to the warning above!

WARNING: DO NOT ATTEMPT TO BOTTOM-CHARGE THE STOCK NICAD PACK IN AN ICOM BC-35 OR CLONE CHARGER.

Clint

Compressed air, in moderation (i.e., not enough force to physically blow
parts off the boards) is fine ... so is application of a general purpose
cleaner like "409" followed by light scrubbing with an old toothbrush or
stiff-bristled paintbrush. Vacuum cleaners typically don't have enough
air volume to do the job. Those boards aren't as delicate as you might
imagine!

Hi Zack... can you give us a brief rundown of the design...
Passive or active mixers ? MMIC gain blocks ? What about the front-end
and PA ? Airwound or toroidal inductors ?
In what issue of QEX do you expect it to appear ?

Regards..

I disagree to an extent, Zack. I think circuit boards can
facilitate experimentation since it's often easier to modify
a circuit board than to design and fabricate your own from
scratch. That's not always true, but like working with ICs
rather than discretes, its often true that having some of
the donkey work already done tends to encourage experiments.

I read in a FAQ about putting the FT-530 pack in the freezer and freezing
the pack. It stated that the pack is glued together and by freezing and
giving the pack a good smack usually gives a clean break at the glue line.
I haven't had the need to try this yet, but I'm sure I will since I own
two FT-530.

Being something of a junk collector I have a number of radios that transmit on various frequencies-I guess that makes me a really bad person, unless the fact that I don't use these counts for something. I just wanted to see what "made them tick".

I have a close friend who owns a Radio Shack dealer store, and his employees are instructed to discuss the purchase with the customer at length before completing the sale, and to refuse the sale if there is any doubt as to the reason for the purchase. I was there the other day when two construction workers came in looking to buy radios. One of them had seen something about the HTX-202 and knew it could change frequencies, and they wanted two of these. The employee refused the sale, and they wound up with two VHF business radios.

On the other hand, I've seen them sell to an unlicensed person once in a while, after it became apparent that this person had actually been studying for the test, and it was made clear to them that transmitting without a license was illegal, and just plain dumb, since the people you would make mad by doing so are the same ones you will be trying to talk with after passing the test.

Hi Scott,

May be the best suggestion is, not to get a hand held at all. You may soon find that its range and usefulness is rather limited and that you had spent better the cash on an decent s/h mobile radio. Before investing money into a twinbander you should enquire about the level of 70 cm activity in your area. A large number of folks do have 70, but never used it.

I have had some very poor and unusual experiences with the Alinco repair and service department. One radio has been back to Alinco 5 (five) times for the same problem. Have been twice promised a new replacement radio. First promise fell through completely. Got same radio back with same problems. Second promise (for a 582) also fell through and received a 'new' (?) 580 wrapped in a plastic bag. The new Executive Vice President (Taka) refused to take my phone call. Much more to the story. Many UPS trips, letters and phone calls full of empty promises. Any other experiences out there? How would one start up an internet mailing list or forum for Alinco product users to correspond with each other concerning their experiences, both good and bad, and to discuss Alinco products, features, etc, etc,..... Thanks in advance for your input.

From: jlb@earthlink.net
Message-ID: <199509200712.AAA29848@atlas.earthlink.net>
Source record: 212244

I had a chance to use a TS-870S today for about a half hour and was using a 20m beam at 65 feet. 30 minutes is not enough time to evaluate the radio so all I can offer are my first impressions. My point of reference is a 1000D which I used for three years and was glad to get rid of and a IC-738 which I am using now and like a great deal. (QST loved the 1000D and gave the IC-738 low marks.)

The first thing that struck me about TS-870S was that there was no easy to find keypad for direct entry. It may be there I just could not find it. Also it has no separate 2nd receiver. The DSP filtering reminded me of my Timewave DSP with very similar performance. It worked great on CW and was OK for voice but it didn't work "head and shoulders" better than my Timewave. The main tuning knob takes some getting used to also. It protrudes out from the front panal more than most and I kept having to bend my wrist in an awkward way to turn the knob.

On the plus side I did like the receive audio and I especially liked the electronic "bandpass" filters. I also was very impressed with the variable AGC.

2219. DR 112 on 220?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-20 00:00:00 UTC
From: mkelly@brisbane.DIALix.oz.au
Message-ID: <43ov30$qf8$1@brisbane.DIALix.oz.au>
Source record: 212246

One of the buttons on the DR112 failed and after attention to it I idly checked all the others behind the front plate just to save myself a trip back. I did not notice until too late that there is an extra one between the 'call' button and the Mic socket which is labelled 'reset'. The power was off but the readout flashed.

On power-up, the VFO now tuned 220-224. Nothing on 144. We do not have an allocation on 220. Pressing the reset with power on restored 2m to me - I had to set everything!

This information I have never seen anywhere else but is of curiosity value to me, only. Perhaps the W/K/N stations with a DR112 can make something more of it?

Cheers. Murray Kelly vk4aok.

2M / 6M is a range on which dead bug (uglyboard) works very well.
Alternatively, you may want to go this way and tell about it
more explicit. Uglyboard is faster than a regular PCB, no messy
chemicals, and easy experimenting.
It might be a good way to show how this stuff can be built so
it would actually work. All it takes is unetched PCB.

IMHO, it would be *very* appropiate to show people how they can
construct their own circuits easily without those
nasty PCB layout problems.

: Any advice would be great!

Well, if it were mine-- The air pressure at typical gas stations is quite
high. If you use it, be very careful. If the crud isn't stuck on too
tight, you might try using a vacuum cleaner, but with the hose connected
on the air output side. You can do this with a many vacuum cleaners.
Then, by using the 'wand' attachment, the one that pinches down to a
small opening, you can get enought pressure to blow off dirt, etc. without
any damage. If the stuff is stuck too tight to blow off, what I do
is to wash the equipment. First with 'Formula 409' cleaner and a small
brush to loosen the really bad spots, then rinsed very well with water,
allowed to 'drip dry', then I dry it for a day or so in a 50 degree C
heat box. You must not soak any paper items, such as as dial scale and
it's not good to direct water at an unsealed power transformer. Of course,
I have a 'wash booth' and a 'heat box' available at work, so it's easy
for me to do this. But it does work.

Good luck, de Mike, K0TER

It may have been a typo that says... ".5km", which IS 500 meters. It
is UNLIKELY that the phone will operate beyond 500 meters, as it was not
designed to... Just think of all the cordless phones out there and the
likelihood that two people within 5km would have the same
make/model/frequency.

From: stevekn@aol.com
Message-ID: <43pnfb$j58@newsbf02.news.aol.com>
Source record: 212251

I'm looking for the MC3362 single chip receiver chip and the LM6321 buffer opamp.
Question: Does any one know of a source which carries this chip. If the chip is unavailable, is there an upgraded chip with a new manufactuers part
number? Hopefully they still have the chip (or similar one with the same pin
outs). Any help is appreaciated :)
please reply via E-mail.

Thanks de Steve, KD1EN

Scott,

TAPR has a device that might fit this. I can not remember the actual Name, but it takes analog inputs and then you can attach them to a packet controller as I remember.

2226. Kenwood TS440 problem - second try!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-21 00:00:00 UTC
From: nomer@tyrell.net
Message-ID: <mGMYwEqQFwYX083yn@tyrell.net>
Source record: 212164

Sorry about the incomplete post the first time...I'll try once again.

I have a Kenwood TS440 which is five years old. It's had the VCO problem taken care of, and worked fine for about a year after this repair. But now, on 30-10 meters, on CW, there is a frequency shift at the beginning of each CW element transmitted. (The receiver is rock-steady on all frequencies.)

I had the rig checked by an out-of-town repair shop. It checked out fine; I talked with the tech and he assured me that there was no visible problem on the scope and no audible problem with CW transmissions. I only shipped the rig, not the power supply or power cable.

When I received the rig from the repair shop and hooked it back up, it exhibited the same problem as before. But while getting things hooked up, I noticed that the fuse holders were getting very warm after a few minutes of approx. 20-wpm CW transmission.

I have checked out the power supply, and it is OK. I'm to the point now that I'm strongly suspecting the power cable. I replaced the fuse holders, and the new ones heat up like the originals. Also, it appears that the rig is drawing approximately 2 amps less than it used to; this is according to the ammeter on the Astron power supply I'm using.

Has anyone had a similar problem? Any ideas will be appreciated!

Steve

2227. Heathkit DX-20 CW Transmitter

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-21 00:00:00 UTC
From: Thomas Foster <tlfoster@ix.netcom.com>
Message-ID: <43qitn$cq8@ixnews3.ix.netcom.com>
Source record: 212165

I began ham radio back in 1962 with a Heathkit DX-20 50-watt CW transmitter and an old Hallicrafters S20R receiver. Is there anyone who would like to sell their DX-20?

2228. Beam spacing on 70cm fm:

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-21 00:00:00 UTC
From: umsnarr@cc.umanitoba.ca
Message-ID: <43qrnk$2vg@canopus.cc.umanitoba.ca>
Source record: 212166

I have two eleven element 70cm beams made by CushCraft. These same
antannas are sold with a kit for stacking and I am wondering what the
ideal spacing would be when installed with vertical polarity on a cross
boom. Reading the instructions tells me that the spacing should be 25",
or just under one wavelength. This seems to be a bit close to me but I am
looking fore an opinion from someone who has had some experience with these
antannas.
Please e-mail me if you have any ideas on this. I'm planning on
putting them on an 80' tower and don't feel like adjusting things way up
there!
Thanks in advance.
-Gord.

Is Kantronics still ripping hams off by selling products that are
totally incompatible with after market products? (like modems,
software, etc.) Seems to me that for years hams bought kpc-2's
thinking they were getting a good deal only to find out later when
everyone else was upgrading with tapr or g3ruf or k9ng modems that
their kpc-2's were stuck at 1200 baud forever.

Just wondering....

Source record: 212170

The item you are describing is called a modulator. They come in all shapes and sizes, with all types of price tags. There is one unit which is called a CAM-25. It will generate a beautiful tv signal on cable ch's 37- 70. Cable ch 60 = 439.25. This unit costs about $125 and puts out a very low level signal, suitable for connecting to a tv via a piece of coax cable. If you intend to transmit into the air you must step this signal up many many times. I use this modulator as my atv exciter. You can get one from the folks at Pauldon Electronics, Upstate NY. Good luck..

I see your point, but since I can't supply circuit boards
(HQ staffers can't run amateur related businesses), I
prefer to leave QST page space open for others to fill.

I'm still waiting for an Internet PCB layout standard to
evolve. In fact, few hams other than myself seem to be
distributing Net compatible layouts in *any* form. I'm
currently generating Postscript files using HiWire, a
CAD program by Wintek, but suspect I ought to switch over
to Autocad to gain the flexibility of generating things
like properly dimensioned rat race microwave mixers.

2239. Re: Cleaning of Equipment...Advice please...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-21 00:00:00 UTC
From: n4lq@iglou.iglou.com
Message-ID: <DF9Hp5.Izr@iglou.com>
Source record: 212177

Good advice below. The air will help then I use Dow bathroom cleaner with the "foamy bubbles". That stuff realy works great. Be careful spraying it on front panels though. It can be rough on some paint. Use a toothbrush to scrub the parts then rinse with water or just a wet rag until the dirt is gone. I use a fan for a few days to dry it but the heat would be better. I'm sure the xyl wont mind you using her oven if you take her out to dinner.

: Well, if it were mine-- The air pressure at typical gas stations is quite
: high. If you use it, be very careful. If the crud isn't stuck on too
: tight, you might try using a vacuum cleaner, but with the hose connected
: on the air output side. You can do this with a many vacuum cleaners.
: Then, by using the 'wand' attachment, the one that pinches down to a
: small opening, you can get enought pressure to blow off dirt, etc. without
: any damage. If the stuff is stuck too tight to blow off, what I do
: is to wash the equipment. First with 'Formula 409' cleaner and a small
: brush to loosen the really bad spots, then rinsed very well with water,
: allowed to 'drip dry', then I dry it for a day or so in a 50 degree C
: heat box. You must not soak any paper items, such as as dial scale and
: it's not good to direct water at an unsealed power transformer. Of course,
: I have a 'wash booth' and a 'heat box' available at work, so it's easy
: for me to do this. But it does work.

: Good luck, de Mike, K0TER

A friend (and new amateur) who has no net access, plans to buy a
2m/70cm HT, and seeks commentary and recommendations on the
following:
Icom W31 and Z1A
Yaesu 51R

But there's more relevant information to add, though he would not ...

He has increasing strength and dexterity limitations due to MS, so in
my opinion he should consider also
a) relative ease of operation (placement and size of controls
and buttons, etc.)
b) relative simplicity of operation
c) other manufacturers and models, perhaps

I do not have good knowledge of the specific models he mentioned
(above), nor do I know what models might be better.

Any recommendations you can offer will be appreciated.

I tried using my 202 for packet and found it marginal. Since others have found it workable, it may be that there is some variation in audio response from unit to unit. On the other hand, I consider the 202 to to be a heck of a lot of radio for the money. Have used one day in and day out for 2 years with no problem other than the battery getting a little loose once in a while. The screws loosen up, and the rails can bend and cause intermittent contact. Don't know of a better combination of price and features.

>Subject: Re: Looking for first handheld, suggestions?

This will no doubt start yet another HTX202 debate, but I'll give it a shot anyway. If it were me, today, and I felt the real urge to get a 2M handheld, I think I would opt for the Rat Shack 2M unit when it goes on sale. In spite of it's alleged flaws, lack of bells and whistles, etc... what appeals to me is the fact it CAN'T go out of band. It appeals to me because of where I live and work. It's a real nasty rf environment and there isn't one modern radio I can hook up to my discone (and I have tried 4 to date) that doesn't get blasted with rf, creating all kinds of front end overload resulting in a lot of noise and garbage coming out of the speaker. It seems the HTX202 has some filtering in the front end. Most of the other radios I guess have front ends as wide as the proverbial barn door. The other thing appealing about the rat shack radios is the cost. Seems it can be had for less than $200 when on sale. That's my .000002 cents worth.

Good luck to ya' all.

Detergent cleaning of equipment does seem to work; I have rejuvenated a key-
board very satifactorily. Drying is essential since even a pager with a 1.5 v
battery dropped in the water (e.g. toilet) if left damp without removing the
battery (including any memory lithiums) can show serious circuit land corrosion
in 24 hours. However, as long as no current paths exist until dry, washing
has worked for me very well on several occasions. If you use a dishwasher, I
have heard that dishwasher detergent has fine grit included as a polisher-- you
would not want this stuff on your variable capacitor bearings or even hiding
in tuning slugs, so perhaps ordinary detergent is advisable. Good Luck. K9ZAT.

Most radios sold today are easily modified by soldering a jumper or
removing a certain component in the circuit to extend the transmit
freq for MARS/CAP. The dealers can help you get a simple sheet that
will step you through the process. I have personally modified a Yaesu
FT-530 and a FT-2400, and both were simple and straight forward. Just
ask the dealer, and they will help you. Of course, they usually won't
help you without a copy of your CAP license. But, once they have that,
they'll get you started on the right track.

2253. hard case for Yaesu FT-51r

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-21 00:00:00 UTC
From: scholl@news-server
Message-ID: <43sj75$p2k@uwm.edu>
Source record: 212191

I'm looking for a manufacturer that makes a hard leather case for the
Yaesu FT-51R handheld. Preferably with a swivel belt release.

Yaesu only makes the soft case which is like no protection at all as far
as I'm concerned. I contacted Bee Electronics but they don't have
anything for the 51r and are not aware as to whether any of their existing
cases would work.

If you know of such a substitution that works or know a company that makes
them please contact me at scholl@mpm1.mpm.edu
or you can call me by phone or post the answer here. Thanks!

: I'm just getting into this hobby, I have a million questions. If anyone
: would be willing to answer a few, I greatly appreciate it!

I would suggest getting an old IC-2AT. They go for around $100 with
all the extras. The radio is damn near indestructible in normal use, and
works well. This gets you operating without being overwhelmed by features
and price. Once you have played with the HT then you'll knwo better what
you want out of a fancier one. For now, you probably won't use but a small
number of the features on a higher priced model.

> and

This certainly is not the "best of name" for HAM radio. As another poster stated, it would be very foolish to think that any conference with a "radio" in the name would be **only** about HAM radio.

There is a conference called "rec.ham-radio.swap" that I get and there has **never** been one message in it. I have subscribed to this conference for over 2 months now, and nothing is ever in it.

>2) ...that some users, on many newsgroups, take things far too seriously.
> Posting "for sale" ads on this newsgroup is not the end of the world.

Isn't that the truth!

As another poster stated, with the amount of FS/WTB traffic, the so called "charter" should change with he "desires" of the users (as is obvious by the traffic). Of course, that may be too difficult for those in charge of the conference to understand!

Icom has just today (September 21) announced that the FCC has granted
type acceptance for this radio.

Icom projects shipping by the end of this month (September).

Amateur Electronic Supply will be having Icom Days at two of their stores
in this time frame ... at the Ohio store on Saturday, September 30, and
at the Las Vegas store on Saturday, October 7. Icom will do their typical
"dollars off" Icom day coupons at all A.E.S. stores on those two days.

We, the dealers, are looking forward to seeing those radios .... Icom had
a get-together with all A.E.S. managers at Icom Headquarters in Bellevue
about six weeks ago, where we all had a chance to get some hands-on
experience with both the IC-706 and the IC-775DSP ... and we can report
that these are both f-i-n-e radios!

Hope to hear from you soon!

73,

"Squeak" Porray, AD7K

Well you take a Kenwood (any Kenwood) and wrap it in C4. Now
while transmitting a long dah, detonate the C4. It may not
generate much of an EMP, but at least it'll rid the world of
another Kenwood. :-)

Seriously, you're asking in the wrong groups. Try Sci.military.

2262. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-22 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <43ujg9$ej0@mrnews.mro.dec.com>
Source record: 212106
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

[This post lists all the information I'm looking for. You'll only have to look at this once in a while from now until the FAQ is ready - N1OOQ]

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band? Easy: re-crystal, tweak a few tuning screws

Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design
of some circuits, you must pay
authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every couple of weeks for a while, until the
FAQ is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

-Tom R. N1OOQ randolph@est.enet.dec.com

From: "Gary P. Fiber" <gfiber@halcyon.com>
Message-ID: <43tcst$rk2@news.halcyon.com>
Source record: 212107

Yes the IC-2410 will do cross band repeat. Set up the desired frequencies. Press both the Band and Set buttons untill the memory channels change to a flashing " L " . To revert back to normal mode, just press the SET until the " L " changes back to a normal memory channel number. if you E-Mail Icom America a request for thsi in writing, along with either a fax or mailing address i will bet you will receive it. There are some remote commands to do this from a handheld if you have the UT-55 installed. ICOM America's E-Mail address is 75540.525@compuserve.com

From: jamest@netcom.com
Message-ID: <jamestDFBK9r.6L7@netcom.com>
Source record: 212109

I bought an MFJ 422C keyer last weekend, but am thinking of returning it. It seems that it will occasionally throw in a dash thats about 150% longer than the rest. It kind of screws up my sending rythmn. Has anyone else seen this? The manual show that it has an 80C52 in it so it appears that this must be a software bug. Additionally, the sidetown wanders up and down while keying. Again kind of annoying.

My brother has an older model of this keyer and he thought his has a Curtis chip inside. He's pretty happy with his. Mine however, is quite a disappointment :(

Oh, well maybe I best return it and get something else.

Does anyone have a recommendation for a keyer and paddle?

TIA

L8R,

James

From: peterjs@aol.com
Message-ID: <43udqi$3o8@newsbf02.news.aol.com>
Source record: 212110

I'm in the market to buy my first linear amplifier (80m-10m) and would be interested in any feedback that folks could give me about what particular features to look for in a linear amplifier. There seems to be a wide range of units available in different prices but I would be happy with a manually tuneable one that will suffice for 1 to 2 hours/day usage on CW and SSB. Also, if I end up buying a used amp, are there any particular gotcha's to watch out for in evaluating the fitness of a used amp? Finally, are there any particular makes/models that folks would recommend/avoid in the under $1,500 new or used category?

BTW, I get that the ETO Alpha class amp's get a lot of good press (look at any CQ mag cover with a person's shack on it and an Alpha is often shown!) but why are they viewed as good (but too expensive for me!) amp's at their pretty high price level?

>I second that motion. I took a look over there on r.r.s. and I have
>no interest in reading through all the scanner and cb crap to find ham
>gear. This looks like the perfect place to post fs/etc ham gear to
>me.

Do you demand that all cb/scanner stuff not show up at your local swapfest,
too?

The idea is that rec.radio.swap is the online swapfest. Just as you can find
lots of different types of electronics at a swapfest, so can you in
rec.radio.swap. If you don't want what a particular seller has on his table
(in his post), then walk past it.

This group was cast as having no forsale posts for a reason: because that
allows sites that prohibit their use for personal monetary gain (and yes,
there are some, primarily in the government) to carry this group and not
carry r.r.s, and thus keep themselves out of trouble. If you insist on
posting for sale messages to this group, those sites will drop it. You may
not like that state of affairs, but it's reality.

I am looking for anyone who can share their experiences with tapping the AGC or the signal stength circuits in the radio. My goal is to finish construction on external signal strength meters to facilitate transmitter hunting.

I tore open the rig and looked in there, poked around, made a few measurements, and looked at the schematics, and decided to give up on the project. Well, it is now a few months later and I really want to use the rig for transmitter hunting. There must be a t-hunter out there somewhere who can share their suggestions.

Good idea Gary, but I suspect that we'll run into a pretty wide
variety of tools that interface poorly, if at all. But for my part:

Mechanical CAD
TurboCAD - by IMSI
Generic CAD - not currently using

Schematic Capture
PCAD

PCB Layout & Routing
PCAD

Circuit Simulation
Intusoft Spice

Math tools
Mathcad - but not very experience with it

Logic development tools
CUPL - normal PALs
MAX+PLUS - Altera logic

I've had my 51RH for sevral months now and am
quite pleased with it. I still have my old Icom 2AT
which is dedicated to packet but the 51R goes everywhere
with me. I agree with the other chap who spoke favorably
about his. It has so many features however that you
would be best off to get used to it and set the functions
up before you try to operate it and a car at the same
time. We used to be able to count the thumb-wheels on the
older HTs but these new ones require the user to read the
display. HArd to do that and drive. Other than that,
it is a very fine rig.

>P.S. I was going to get one of these for my wife.

I am sure you realize that there will be great variations in distance due to interference and terrain. I don't live in a real urban environment (to say the least) but I can tell you that from my cabin South of Mt. McKinley I can hit the Anchorage repeater which is at least 70 miles away using my Kenwood HT and a 1/4 wave ground plane mounted on my roof. In town, (Fairbanks) with a rubber ducky I can sometimes only get a mile or two, so it depends greatly on the antenna and terrain.

Hi Vijay,
Lots of folks can/will give you LOTS of opinions about what is best
and what features are important. For a REAL basic rundown of
cost/features check out Ham Radio Outlet's home page. It's new and
has LOTS of cool info neatly presented along with links to various
manufacturer's home pages. They are at: http://www.hamradio.com/

Good luck, and be sure to check out rec.radio.swap for a constant
barage of bargains... well sometimes. ;-) Mike KD6PKJ

Before I responded to your inquiry I took the time to read the other replies to see if there might be anything new I could offer. But based on what they said, they just about covered it. I like my 51RH and since I am always forgetting to charge my batteries, the 51 pretty much minds the store both on power out conservation and the voltage monitor. Nobody mentioned the spectrum analyzer... Just be sure to not get distracted by the unit when driving down the road. It's easy to do, just set it before you start the engine! Have Fun! You might want to get the display mic for it as well. Oh, one more thing. Stay away from modifying the thing. We all want to talk to each other, not some federal judge!

Yes and get someone to modify it for you too. Jerry, I'm sure you wanted some useful information
when you asked about the radios. I haven't used the Icom rig mentioned. I do have the 51RH and
really like it. It has all the features I could need or use for quite some time. I don't plan
on having to buy another radio for a long time. Some hams like to tinker more than operate on
the air, others not. The Yeasu 51R is an operators radio. It works. It works real well.

I just got my DR600 back from them today. I sent it in on Monday and got it back on Friday. Not too bad. The problem was fixed. I believe the 600 has a software bug in it and they replaced the microprocessor.

This is my 2nd time to send it in for repair. (different problems). They have treated me fine and got my rig out very quickly. I spoke to Taka on the phone and he is the one that told me to send it in.

I havent been very satisfied with the quality of the rig but the service has been pretty darn good in my opinion.

There must be a problem somewhere in manufacturing though. I got one DR600 and it went out the first week. The store replaced it and it burnt up the first month. I got it repaired and had to send it back a second time 2 months later. In less than 4 months I have had 2 radios and 2 trips to service.

(Hummmmm.... It doesn't figure)

Have a good one and good luck.

I bought some third party FNB-25 batteries from W+W and had to grind the top of them with my dremel tool to make them fit on the radio. It still doesn't look very good because of the gaps between the battery and the bottom of the HT. It makes good contact though.

The Periphex battery cases I have bought in the past seem to be a more accurate replacement than the W+W ones.

Anyone ever used that MFJ packet transciever. The crystal controlled radio.

I have been considering purchasing one and was wondering how well they were built and if they were worth it. I can't really afford to spend another 300 to 500 bucks for another rig right now. Just bought a whole new setup. I want to get back on packet though. I realize that it is only 5 watts but I think I can hit the local DIGI and a few BBS's with that with no problem.

Thanks in advance.

A better reason not to tune with power: arcing of the finger stock where the inner & outer plunger which make up the main tuning element are electrically connected. You'll know if you've fried the fingers when you see the resonator start to act intermittent & lossy.

I still tune with power, but I NEVER MOVE the tuning element under power. I transmit for a very brief period, then stop transmitting, adjust, transmit, etc. More time consuming but it will save your pass cans.

I just got one a week ago at Peoria hamfest and it does work (brief use
on 145.01 which unfortunately is a forwarding freq here in Des Moines.
MFJ apparently has arrangements with a couple of crystal companies, JAN &
International) so I'll be re-crystalling for other freqs. I haven't
opened it up yet, so I don't know the construction quality. The
instruction book seems complete (sans schematic), and the radio is switchable
between 1200 & 9600 (phase mod on 1200 and fm (fsk) on 9600). MFJ includes
suggestion for alignment procs and deviation control. I bought a
5-pin/5-pin DIN cable at Radio Shack to connect to a MFJ1274.

At the hamfest, the rig set me back $105.00. Keep in mind that there is no
conventional audio circuit in the radio - ie, no speaker/microphone
connections at all.
I believe it will suit my purpose well. I plan on trying it with TCP/IP as
soon as I get new crystals.

: Does anyone have any info on the new Yaseu single-band "mil spec" (for
: target practice?) HTs that I see on the back page of October QST? They
: look interesting.

I've had a chance to try this new HT (FT-10) at HRO. It is much fatter
than it looks in the QST ad. The battery pack attaches to the back of
the rig and theis makes the whole thing about 2 inches thick. It's about
the same size as an FT-11, only fatter.

The build quality seems better than the average ham HT, but not as
good as a Motorola commercial HT. The PTT switch, in particular, seemed
like it would wear quickly. Audio quality wasn't bad, but it wasn't
as good as my Motorola HT1000.

The rotary knob on top of the rig is used to control most of the settings.
It both turns and acts like a push-button. In operation, it didn't seem
too intuitive--I'd definitely carry the instruction book with me at all
times!

The rig doesn't use a BNC antenna connector. It uses a screw-in connector
that I've never seen before--like the screw-in connectors on Motorola
HT's, only the opposite gender.

Gee. With the possible exception of Generic CADD none of these are Macintosh compatible. I vote for a narrower scope of "standard", simple Postscript. A Postscript printer is much less expensive than Autocad (assuming you actually pay for Autocad) and any kind of "standardization" of file formats dictates need for each and every one of the programs.

Or maybe the standard should be based on free tools and operating systems such as Linux and/or FreeBSD? What? Not enough tools there? Then making those tools would be the first step.

While many software packages claim to support other's formats I have never seen perfect support for any but pure text and often even that is problematic (does "pure text" use <CR><LF>, <LF>, or <CR> to terminate lines?) End of line problems are pretty easy to solve. Gary discounts Ghostscript as he has not been satisfied with its results translating Postscript. Can we expect DXF translaters to do any better?

Postscript is not perfectly portable between printers but Adobe has done a great job making sure genuine Postscript printers are very compatible.

For netlists any ASCII format is fine. If I like what I see in a Postscript schematic I can find a way to translate an ASCII netlist into a form suitable for my PCB tools. Any respectable print shop could print PCB artwork on film from Postscript. Often I've found this less expensive than Gerber at the same shop possibly because there is no manual entry of aperatures. As long as they don't use a Linotype 100 its just dandy.

2289. ts-520 low plate current above 7 Mhz

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-22 00:00:00 UTC
From: tomas@ra.cgd.ucar.edu
Message-ID: <43unjv$com@ncar.ucar.edu>
Source record: 212133

I "inheritted" a ts-520s. I've noticed that it draws less plate current on 20, 15 and 10 meters than the manual specfies it should: about 160 ma to 120 ma instead of the specified 200 ma. It draws less as the freqencey gets higher.

I think that all tubes are original equipment making them about 17 years old. This makes me suspect that they should be replaced. However, the finals and driver do not seem to show excessively broad tuning (the manual states that this is a symptom of bad finals or driver tube(s)).

Does anyone have any experiences related to this problem they care to share?

Just heard about it. I heard that it's a new 2-meter handheld,
- smaller than the FT-11R,
- particularly good audio from small speaker (unlike 11R),
- comes with 2 different keyboards to choose from,
- has a digital recording system,
- is rugged, and is milspec rated.

I wonder if the short digital recording can be played back while
transmitting (e.g. for identification use).

And, I have not heard how much it costs. Anyone have one?

Don,
The ICOM IC-735 is one of the finer/reliable radios ever made. The filters are a little bit broad but, the receiver clarity and dynamic range will make up for that. The transmitter is also very reliable and stable. However, because it was designed as a mobile it lacks a RF speech processor which might be more desirable on 160. All in All you can not go wrong....

>73 jim

I posted a finding about the DR112 the other day. I had the front
off to fix one of the press buttons and in checking the others I failed
to notice an extra 'reset' button next the mic plug. The readout
flashed EVEN THO THE POWER WAS OFF. On power up the VFO was now in
the 220-224 range. No use to me - we don't have that band.

I don't know if it transmitted, even. I just pressed the reset with
the power on and had 2m back. Then I had to reset all the paramaters
I was used to. I notice it scans better, for some curious reason.

I have never seen this mod described elsewhere. eg on oak.oakland.edu
in the /pub3/hamradio/mods/alinco directory if you can ftp.

Cheers.
Murray Kelly. vk4aok

All the rec.radio.amateur.* groups are for discussion ONLY. None are for buying and selling. It's in the Guide.

> The current name indicates no such restriction and seems to be the
>ideal place for notices of sale or wants .

Perhaps we should rename the rec.radio.amateur.* groups to the rec.radio.amateur.NO-BUYING-OR-SELLING.* groups, but even that probably wouldn't stop the truly clueless. If they won't read the Guide or the FAQ, why should we expect them to read the group name.

> To quote what the "Charter " of the group says is not very helpful , I
>doubt if 1 in 10,000 of the people who look at this group even know of

> The group name Rec.radio.swap conjures up (for me at least) a vision
>of Antique broadcast radio collectors swapping vintage valve sets !!!
> Let us not be so parochial as to think that Ham radio is the only
>type of recreational radio

Well, that's the idea. The swap group is for swaps, sales, trades, wanted to buy, etc of *any* kind of radio equipment, including amateur, as well as scanners, shortwave receivers, CBs, or even antique boat anchors, by members of those rec.radio.* newsgroups. The idea was to have one marketplace and get the dang ads out of *all* the main discussion groups for the entire rec.radio.* hierarchy.

Of course I argued at the time of the Great Renaming that we should just stay as rec.ham-radio, one big group, and let the users manage it how they want on their own machines. That's what kill files and threaded readers are for. But no, we were told that by breaking it in pieces we'd get rid of the clutter. Fat chance when nobody respects the hierarchy, and when people *repost* the same stupid article to every group instead of properly cross-posting. Oh, well, there still are threaded readers and kill files, regardless, so it probably doesn't

matter much one way or the other. (Except for the reposts, that takes up extra disk space, I *hate* that.)

And yeah, *this* post is off charter too. Grumble!

2300. [Q] Yaesu FRG8800 wide band FM

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-22 00:00:00 UTC
From: daryl@alliedpress.co.nz
Message-ID: <43teni$79r@celebrian.otago.ac.nz>
Source record: 212199

Anyone know where I might get the wide band FM section for a Yaesu FRG8800 receiver with VHF converter.

In the book it states that there is one available with gives a 50kHz bandwidth instead of the noral =/- 5kHz narrow band, but it is an optoinal extra. Having the larger bandwidth will make it possible to receive the satellite APT, which is what I want to do.

Are there any mods out there that will do this for me anyway?? Any info would be useful.

Thanks,
Daryl, ZL4TWO.

>like properly dimensioned rat race microwave mixers.

Yeah, I'd prefer the Autocad format. I've got that and it
talks to my plotters. I don't have Postscript and have to
kludge that through ghostscript to print it on the old
HP Laser.

Maybe we should start some discussion on this topic. (I've
added .homebrew to the distribution.)

I'd like to see us standardize on a schematic distribution
format, a netlist format, and a mechanical drawing format.
Then form a rec.radio.amateur.CAD group where we could
post such things, as well as Radio Designer and Spice
files, Mathcad worksheets, etc. Since many of the CAD tools
can handle several formats, and there are utilities to convert
others, perhaps we should start with a survey of what tools
the majority of us interested in this have in common and see
if there are common formats we all share. I'll kick it off.

Mechanical:
1) Autocad
2) Generic CADD
3) CD-CAD

Schematic Capture:
1) Orcad
2) Supercad
3) MicroSim Schematic Editor

PC layout:
1) PCBoards

Routers:
1) PCRoute

Circuit Simulators:
1) ARRL Radio Designer
2) PSpice

Paint programs and image viewers:
1) MS Paintbrush
2) Visual Image

Math tools:
1) Mathcad

That should do for a start. I'll try to keep a running tabulation
on followups and see what we have available to us.

In article <43sotu$8hl@ixnews3.ix.netcom.com> sking1@ix.netcom.com (Stephen A. King) writes:
>There is a conference called "rec.ham-radio.swap" that I get and there
>has **never** been one message in it. I have subscribed to this
>conference for over 2 months now, and nothing is ever in it.

Not surprising since it's a defunct group. When the Great Renaming occurred, and the Rec.radio hierarchy was created, all the Rec.ham-radio groups were rmgrouped. Unfortunately, some sysops never seem to get the word and leave defunct groups in their active files. That's the case here. You don't see anything in the group because on the majority of Usenet systems it no longer exists, and hasn't for a long time. It was replaced by Rec.radio.swap.

There's also no longer a Rec.radio.amateur.packet newsgroup, though I occasionally see messages with that group in the header. It was replaced by Rec.radio.amateur.digital.misc. It was hoped at the time that there would eventually be a whole hierarchy under the digital banner, including a separate packet group, but so far volume hasn't warranted it so we just lump everything digital into Rec.radio.amateur.digital.misc. The breakpoint seems to be around 100 messages a day. When a group gets that active, it's usually time to break it down into subgroups (or so some claim).

There is a logic behind all this, and part of it has to do with the disk directory hierarchy on Usenet distribution machines. Everything is setup to minimize directories that are empty except for a subgroup. That's why there are no .d groups in the amateur hierarchy, the host group above it would be empty, causing an unnecessary nesting of directories on the Usenet machines. (.digital is the exception, but it's supposed to eventually fill with several subgroups)

When and if we create an amateur CAD newsgroup, arguments will rage as to where to put it. Will it go under .homebrew, will it go under digital, or will it go directly under .amateur? And there will likely be calls to create a .d directory under it for people wanting to discuss the CAD files being posted, and other people will insist just as strongly that the discussion be mixed with the CAD files in the same group, and there will be others who will want the CAD group to *be* a discussion group, and have a .bin subgroup, or whole series of subgroups, under it to hold the files. See how convoluted it can all become?

Eventually it comes down to a vote, and all of us maintaining Usenet hosts will adjust our active files and directory structures accordingly. Of course there will be some who won't go along, either through ignorance, sloth, or just plain cussedness. That's Usenet

for you, a complete anarchy. But the majority of sysops *will* go along, and any orphan groups left out there will be essentially unused, like the Rec.ham-radio.swap group your sysop still clings to.

Thomas:
Thanks for your response to my original posting concerning Alincos service.
My DR600's (3) have held out and performed well, and none have been in for repair. I think (reading behind the lines here) that Alinco may be going through some personel changes. Apparently Taka was formerly the senior service guru and has now become an executive vice president. (of the whole company?, facility? service dept?) Jason, who is "no longer with the company" was the former customer relations representative (the polite 'phone man', to sooth the upset customer). Grant is apparently the new customer relations polite phone man.....and that he is. The root of my problem was not in the speed of their service but that both Jason, when he was there, and now Grant both verbally promised and soothed very well on the phone only to deliver otherwise. Perhaps mine is an isolated case. Five trips to factory service for the same problem does seem excessive though. And, it irritated the hell outa me that Taka would not even take my call. You'd think the amount of Alinco receipts I have would get me a tour of the building, much less a phone call.
Thanks again.

Try a quickie alignment first. If that doesn't help, replace the driver
and finals. BTW, I've worn out various transmitting tubes through the
years and don't remember ever experiencing the "broad tuning" symptom you
mentioned. One thing I do know - absence of this symptom sure doesn't mean
the tubes are good. <g>

Good luck,

>
>Is it worth the effort?

Is anything worth the effort? Depends. It's a cheap way to get a
10 meter radio, and you might learn something doing the conversion.

First off you'll do best to find a SSB CB. Then it's just a
straightforward reprogramming of the synthesizer and a change
of the conversion crystal to get you on 10 meters, usually in
the 28.3 to 28.5 MHz area where you'll find a lot of coded
Techs, and others, hanging out on SSB. This can be a worthwhile
conversion. I've done a couple of them.

If you have an AM CB, converting it to SSB is not practical.
You can either leave it as AM, there is some AM activity in
the middle of 10 meters, up toward 29.0 MHz, or you can convert
it to FM and use it up above 29.0 MHz. The FM conversion is not
bad, but does require some surgery and addition of a few parts
to make a FM modulator and demodulator. Up at the top of 10 meters
there are repeater channels. Getting the rig to operate the repeater
splits can be a challenge since it wasn't designed to work that way.
You have to arrange a 3 channel shift when going from transmit to
receive. That requires more poking around the synthesizer. I'm not
sure that's a practical mod, you might just leave it as a simplex rig.
It's harder to say if this conversion is worthwhile. *I* wouldn't
bother, but then I've already got a rig that covers 10 meters.

I'm in a situation where my 2M rig is severely affected
by IMD from paging transmitters in the region of 150MHz
and up a few MHz. This is pretty severe so I would
appreciate any advice as to how to fight this. Rig is
a Kenwood TM-251 mobile with a vertical 5/8-lambda on the
roof. My IC-22A, an x-tal controlled rig does not suffer
as badly because (I think) of the helical filter in its
front end design. Cavities are a bit too expensive to buy
(maybe homebrew one). I've been thinking of PAR notching
cavity, and external helical solutions. Some of these
require I insert into the rigs receive line with mods
to the rig. I don't mind as long as it works but impedance
matching may be a problem doing that. Can anyone who has
had some success in fighting IMD of this nature please
advise? Thanks.

2316. Help!!! Ignition Noise.....

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-23 00:00:00 UTC
From: rickcrider@aol.com
Message-ID: <440518$m7e@newsbf02.news.aol.com>
Source record: 212065

I've installed a dual band mobile rig in a 1973 Land Rover. Getting a popping noise on receive that varies with engine speed, not an alternator whine. Rover is 12 volt negative ground. Has standard ignition, distributor, points, etc. Hot wire for rig is run directly to battery. Good solid ground. Already installed modern high quality Bosch resistor plugs, and, new carbon core resistor type plug wires. What's next? Thanks......

: Joe,

: Nice little rig for the bucks. Using a Scout as a portable rig for
: RACES drills over the past 6 months.
: Enjoy the freatures. Light, small, easy to handle in field conditions.
: This is a real 'thumbs up' recommendation!

There is, however, a problem that may affect your decision if you're
a CW operator. The Scout's frequency stability can be somewhat erratic
as the microprocessor constantly tries to keep you on frequency. Basically,
it bounces around enough to be noticable to the other operator. You can
usually tell when someone is using a Scout, even before they get to a
description of the rig. :-)

Also, the cost of the Scout + all band modules is equivalent to the
price of a more fully-featured all-band rig. If portability is not an
issue, you'll want to consider that, as well.

The Scout that I operated had a bad backlash problem with the tuning knob.

Is this common with the Scout?

What does this crap have to do with ham radio equipment ?

If you have nothing to say, please don't say it here !

Ms. Robin Shannon Brookstone (Robinsb@tde.com) wrote:
: Those of you here in Denver who suffered the massive power
: outages that you thought were caused by Wednesday nightï¿½s
: storm may be interested in reading this. Itï¿½s the text of a
: letter I faxed to the Public Utilities Commission and the
: 3 big local TV news stations. (BTW, We live in far northeast
: Denver, between the old and new airports.) I got a call from
: channel 4 (CBS affiliate) today, to ask me some questions
: and say they will be looking into it.
:
:
: Public Utilities Commission
: September 21, 1995
: To Whom It May Concern,
: Yesterday we had many short power
: outages followed by one long one from about 11:40 PM until
: around 5:20 AM. During this time, we could look out the door
: and see brilliant flashes north of our house, over towards
: 56th Avenue, as trees touched the power lines and were
: detonated! Every time the power tried to come back on we
: would see another bright flash. During part of this time the
: power was on at the houses across the street from us, but
: later a bright flash occurred and even that went out! Then
: the power came back on for about an hour (I think, because I
: was very sleepy) and then went out again for about another
: hour! We think that all these power outages were no accident,
: nor were they an ï¿½act of Godï¿½ caused by the snow storm, as
: Public Service Co. would have us believe! It is our opinion
: they were caused by a purposeful act of negligence, the
: result of the management at PSCo. not doing their jobs!
:
: Awhile back we were experiencing several power
: outages a week in our neighborhood and we could always tell
: it was a certain feeder because the lights at the houses
: across the street from us would almost always remain on. We
: complained to PSCo. at that time and when it did no good, we
: complained to the PUC. The situation was finally temporarily
: fixed. But what we learned from an employee at PSCo. at the
: time, was that the outages were being caused because PSCo.
: was not insisting that trees be trimmed so they donï¿½t go into
: the power lines every time we get windy, snowy and/or rainy

: weather!
:
: It is PSCo.ï¿½s job to see that trees that grow too
: close to power lines are trimmed! The owner of the residence
: is supposed to it but if they donï¿½t, PSCo. has legal right of
: way, which they may exercise and force the homeowner to allow
: them access to the property to trim the trees. Then I believe
: they are allowed to bill the homeowner for the costs of
: trimming them! But what I was told by this PSCo. employee was
: that there were some people, including someone on the Denver
: City Council, who would not allow access to their property to
: do so, and so they ï¿½couldnï¿½t trim themï¿½! I also heard about a
: year ago, from someone I used to know who works at PSCo.,
: that theyï¿½ve been short handed for several years, and might
: even be having to lay some people off despite being short
: handed, because they made bad investments back in the ï¿½80ï¿½s
: (during the junk bond period?) and lost a lot of money. So
: for awhile they hadnï¿½t been sending meter readers around
: regularly (thatï¿½s been corrected recently) and itï¿½s very
: likely been part of the reason they arenï¿½t being assertive
: about keeping trees out of the power lines! So now that leads
: us to ask; Were all the power outages around the city last
: night caused by untrimmed trees?! Power lines donï¿½t
: generally shut down from only rain, snow or wind!
:
: But am I mistaken?! I thought even powerful
: politicians are supposed to live by the same laws everyone
: else does! Or is the recent trend towards arrogant
: politicians, who no longer seem to have to care what the
: public wants, contributing to this situation?! And why should
: we be subjected to the constant annoyance of unnecessary
: power outages because some politician expects that they donï¿½t
: have to live by the same rules as everyone else?! There is a
: handicapped woman in our household who is disabled, in
: constant severe pain due to the consequences of a past
: injury, and also suffers from allergies and asthma. She does
: not do well when the air filters wonï¿½t run and sooty candles
: must be burned for even enough light to be able to safely go
: to the bathroom! So unless itï¿½s ï¿½Godï¿½ living in our
: neighborhood, or maybe the reincarnation of King or Queen
: Tut, canï¿½t someone get PSCo. to do their jobs right and see
: that those trees get trimmed?! We are formally requesting
: that you look into this matter and try to get it corrected!

2321. RE: New ham looking for HT

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-23 00:00:00 UTC
From: bluospry@ix.netcom.com
Message-ID: <441a4b$87k@ixnews2.ix.netcom.com>
Source record: 212070

Buying the right HT
IMHO all of the ham radio companies are good. Usually the latest radios out have some new features and advantages. But it depends on where you live, how you're going to use it, what you can pay, and what repeater club you belong to that really matters. You should buy an HT suited to your specific needs.
If you want to use it in the distant wilderness you will want a telescoping 1/2 wave antenna, a maximum voltage battery pack (13.2v, 12v or 9.6v depending on the radio), and a radio that puts out 5 to 7 watts. You may want to add a walking stick beam antenna (Arrow Antenna, 1461 Peacock Pl., Loveland CO 80537) if you get even more remote. Bigger batteries, antennas and radios become valuable for remote communications.
Picking bands is simple look in the repeater guide to see which bands have the most open repeaters and where the high coverage mountain top repeaters exist (the maps of repeaters show many of these). In terms of HTs 2 meter propagates better then 1 1/4 meter which is better then 70 cm which is much better then 1.2 gHz. But in underground parking structures the trend reverses. In most areas 2 meter is best and 1 1/4 or 70 cm is second best. In California there are interstate nets two run on 1 1/4 meter through most of the state except the northern extreme into western Arizona and Nevada and one in the southeast desert of California on 2 meter into Arizona, New Mexico and western Texas. Check what nets you might want to use.
Finally decide what repeater group you will join and what bands are best for that club. Pick the best bands for your area and use.
Picking the size of the radio depends on how much you will use it in the big city. Small radios typically have more intermodulation problems, bad for the big city, then the larger HTs. But intermodulation is rarely a problem in the suburbs or afield.
Will you try to use the HT in a vehicle? If you have a very small amp and speaker, typical of the shirt pocket variety, you will need and external audio amp and speaker to hear it in your car. But the larger amp and speakers of the bigger HTs can easily be heard in the moving vehicle. You could of course have a shirt pocket HT and a mobile transceiver in your car. Pick a size of HT that fits your needs.
Some radios have 12 memories and others 200 memories; if there are hundreds of repeaters in the general area of your travels you may want more memories to prevent constant programming. For limited travel in remote areas a dozen memories is fine. Pick the right amount of memories.
Are you going to use the radio at night in the dark? Then you may want a HT that has a key display that is lighted on command.
Most new HT s have CTCSS, tone and paging but in general be aware of

the rest of the features and if they would be of use to you. After you have answered these questions look in the catalogues and match up the HT s with the proper features considering of course your pocketbook. My personal choices were a Standard C228A (2 m / 1 1/4 m, my preferred radio), a Radio Shack HTX-202 (a powerful radio in audio and transmit), and a Standard C558A (2 m / 70 cm) used only when I need a compact radio.

: Then form a rec.radio.amateur.CAD group where we could
: post such things, as well as Radio Designer and Spice
: files, Mathcad worksheets, etc. Since many of the CAD tools
: can handle several formats, and there are utilities to convert
: others, perhaps we should start with a survey of what tools
: the majority of us interested in this have in common and see
: if there are common formats we all share. I'll kick it off.

It is not just "have in common". We need a format that is free and will not become obsolete. Unfortunately, the tool vendors like to lock you in. Not all of us use dos/windoze. There is also Mac and a variety of unix systems.

For netlists, Spice is the obvious choice, possibly with well documented extensions. Every good analog simulator either can use it directly or has conversion utilities available. (to the extent that the features overlap)

For schematics, postscript seems like a good choice on a quick glance, but there are problems. The plus side is that some systems have it built-in, and some printers use it directly. Postscript previewers are available for anything, sometimes free (Ghostscript). All good drawing programs can generate it, at least indirectly. The down sides are that may not be editable, it may not be possible to convert it back to something that it editable, and it is hard to extract a netlist from it. Some programs can edit a subset of Postscript. (Illustrator) But how do we convince the others to stick to the subset that can be edited?

How about demanding an annotated Spice netlist? It is easy to add coordinates to each element. How about 2 sets each -- one for schematic, one for layout. It is easy to make a tool to strip them out for Spice. It should be easy to patch the simulators to ignore the extra fields. The simulators could actually make use of the layout info for interconnect analysis. Since many schematic programs will output a Spice deck, they could be changed to preserve the locations. Maybe someone could make a simple viewer for it, and make it available on the net for free. How about an anno-spice to postscript converter? (master's project, perhaps?) Any takers?

Please don't make me buy any particular tool, especially one that doesn't run on my machine. Free ones off the net are no problem, as

long as they have source and can be compiled on my machine.

Hi,

Having just dramaticly increased the family debt, we now have a new Subaru 1996 Legacy L station wagon. I would like to install a 2m or 2m/440 rig in it.

Any thoughts, suggestions, etc. Advice specific to this model or station wagons in general would be appreciated.

Thanks and 73,

Geoff.

2327. Re: Help!!! Ignition Noise.....

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-23 00:00:00 UTC
From: "Gary P. Fiber" <gfiber@halcyon.com>
Message-ID: <4407mj$3ja@news.halcyon.com>
Source record: 212076

I would start by following the suggestions in the handbook. I used the ground braid from RG-8 cable and bonded my entire enging compartment, cab, bed and tail pipe of my pick-up truck to the frame. Also make sure you bone the radiator support acress the front of the auto. I placed bonding on both sides of the hood to the firewall, the fenders to the firewall, the fenders to the radiator support, the heater motor to the firewall, the firewall to the frame.

Used No. 8 stainless sheel metal phillips head screws with 2 shake proof lock washers sanwiching the ring eye that was soldered to the braid. The " star" washer bites into the paint. My ignition noise went from a S-9 to a S-2. Also I have the addes benefit of a terrific bonded auto so the electrics also work fine. My auto lamps dop not go out when applying the brakes due to a poor gound in the system.

Have Fun the bonding is well worht the effort and will only take about 2 ro 3 hours to do.

>: * Stupid is forever, ignorance can be fixed...
>: **

Before you go looking for trouble in the mixer,
have you checked the T/R switching yet? In that radio they used a pair of
diodes to control the RF switching between TX & RX. The one affecting the
reciever shorts the RX antenna input to ground when a DC voltage is applied
to forward bias it. If this diode is shorted or has a low resistance it could
create exactly the effect you are seeing. Also verify that the DC bias is
applied only in transmit mode and that there is NO voltage applied to it
during receive. (I just checked the schematic. This is diode D2. [p/n MI301])
Also check the connections between D3, L9, C20, C21, and D2. This area tends
to get heated up and any poor connections / cold solder joints here can
cause problems with both receiver sensitivity and TX power output.

Good luck,

Gary, WA2BAU

Go for the DR150T. It'll cost about $20-$25 more, but it is well worth it.
The DR130T is an excellent radio, but is lacking in some "nice" features,
like memory skip.

Mark

TR>: But it performs as it is advertised it will - and it does it
TR>: excellently.

I want to second this opinion. I got an 2-meter Radio Shack and liked it so much that I got a 440 model to keep it company. I liked the remarks about the astetics, because while it does not outclass much in the way of bells and whistles, it does do everything that you need it too and quite well. As for packet, my brother has borrowed the 2 meter brother and has been using it with a baycom packet modem. It has been a good setup for him for over a year now.

Admission: $5.00 per person
Doors open to the general public at 9:00 am Talk-in on VE3YRC 147.225+

This is THE HAMFEST. The one all the others are judged by. 200+ Vendors. In addition to all of Southern Ontario's major Ham Radio Stores, generally Yaesu, Icom and Kenwood are there as well . Plenty of parking. Door prizes. Grand prizes. Refreshments available. Extra space for socializing.

Please note: The Hamfest entrance is at the main entrance to the school on Huron Heights Drive.

Vendor Information:

Tables 1,2 or 3: $15.00 each (Note: These are 6 foot tables) Tables 4 & 5: $25.00 each
Tables 6+: $50.00 each

Vendors Note: Your ADMISSIONS @ 5.00 per person ARE EXTRA.

TABLES ARE ONLY AVAILABLE BY MAIL. No Bookings will be taken by phone, over the air or by packet. Payment must accompany your registration.

Up until October 21st preference will be given to vendors that attended last year's Hamfest.

Geeze, I threw the manual to my EM Pluse Bomb LTD made by Acme in the trash.
If you write them I am sure they can give you lots of information. Can't help
you on the HERF. That damn State of Washington passed a law in 1992 banning
the sales of them here. Sorry.

Excellent advice as usual, Shawn. I'd add one more thing. You won't
lose much to depreciation by buying used. When you get ready to sell,
you'll get almost all your money back. That certainly isn't true when
buying new. You pay dearly in initial depreciation for that pristine
cardboard box.

And a final thought. Newer isn't necessarily better. There are few
HTs out there that can match the old 2AT's performance as a *radio*.
It's not a scanner, and it's not a Gameboy, but it is a good two
way radio. The only serious lack it has is no CTCSS. If two meter
machines in your area require CTCSS for access (fairly unusual in
most areas), look elsewhere for a radio. (You can fit a CTCSS encoder,
but you'll be stuck opening the rig to change the tone, and that can
be a pain if you use several machines that each have a different
access tone.)

Mark me down for Generic Cadd - This also will handle many
AutoCad files as well.

I would cast a vote for the most usable for the general amateur
homebrewing population. Maybe HPGL files are more generic.
There are several inexpensive Cadd programs out there that will
handle them. I can foresee many users that simply want to print
schematics, and an investment in a $400+ Cad program seems a bit
expensive just for that purpose.

Hi Gang,
I foolishly purchased a non-working TR-7400A two
meter rig last weekend. I repaired the major problem
(shorted 5 volt supply), but the receiver sensitivity
is too low (about 20 uV). I have verified that the
receivers front end amp, and helical resonator file
ter is OK, so now I'm looking at the first mixer and
first LO power. Anyone have any idea what power
(or voltage) I should see out of the synthesizer?
Yes, I do have the proper equipment to measure it,
I just don't know what level to expect. Has anyone
out there seen this problem (low sensitivity), and
solved it? I'd sure like to hear from you!!!

I'm also working at a disadvantage because I do
not have the service manual, and the schematic
included with the owners manual does not include the
synthesizer. Anyone willing to blast a copy of theirs?
As usual, I'll be happy to pay copying ans shipping
costs.

Thanks!

2341. Were the power outages REALLY an act of "God"?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-23 00:00:00 UTC
From: Robinsb@tde.com
Message-ID: <43vp56$alq@tde2.tde.com>
Source record: 212146

Those of you here in Denver who suffered the massive power outages that you thought were caused by Wednesday night's storm may be interested in reading this. It's the text of a letter I faxed to the Public Utilities Commission and the 3 big local TV news stations. (BTW, We live in far northeast Denver, between the old and new airports.) I got a call from channel 4 (CBS affiliate) today, to ask me some questions and say they will be looking into it.

Public Utilities Commission
September 21, 1995
To Whom It May Concern,
Yesterday we had many short power outages followed by one long one from about 11:40 PM until around 5:20 AM. During this time, we could look out the door and see brilliant flashes north of our house, over towards 56th Avenue, as trees touched the power lines and were detonated! Every time the power tried to come back on we would see another bright flash. During part of this time the power was on at the houses across the street from us, but later a bright flash occurred and even that went out! Then the power came back on for about an hour (I think, because I was very sleepy) and then went out again for about another hour! We think that all these power outages were no accident, nor were they an "act of God" caused by the snow storm, as Public Service Co. would have us believe! It is our opinion they were caused by a purposeful act of negligence, the result of the management at PSCo. not doing their jobs!

Awhile back we were experiencing several power outages a week in our neighborhood and we could always tell it was a certain feeder because the lights at the houses across the street from us would almost always remain on. We complained to PSCo. at that time and when it did no good, we complained to the PUC. The situation was finally temporarily fixed. But what we learned from an employee at PSCo. at the time, was that the outages were being caused because PSCo. was not insisting that trees be trimmed so they don't go into the power lines every time we get windy, snowy and/or rainy weather!

It is PSCo.'s job to see that trees that grow too close to power lines are trimmed! The owner of the residence is supposed to it but if they don't, PSCo. has legal right of

way, which they may exercise and force the homeowner to allow them access to the property to trim the trees. Then I believe they are allowed to bill the homeowner for the costs of trimming them! But what I was told by this PSCo. employee was that there were some people, including someone on the Denver City Council, who would not allow access to their property to do so, and so they "couldn't trim them"! I also heard about a year ago, from someone I used to know who works at PSCo., that they've been short handed for several years, and might even be having to lay some people off despite being short handed, because they made bad investments back in the "80"s (during the junk bond period?) and lost a lot of money. So for awhile they hadn't been sending meter readers around regularly (that's been corrected recently) and it's very likely been part of the reason they aren't being assertive about keeping trees out of the power lines! So now that leads us to ask; Were all the power outages around the city last night caused by untrimmed trees?! Power lines don't generally shut down from only rain, snow or wind!

But am I mistaken?! I thought even powerful politicians are supposed to live by the same laws everyone else does! Or is the recent trend towards arrogant politicians, who no longer seem to have to care what the public wants, contributing to this situation?! And why should we be subjected to the constant annoyance of unnecessary power outages because some politician expects that they don't have to live by the same rules as everyone else?! There is a handicapped woman in our household who is disabled, in constant severe pain due to the consequences of a past injury, and also suffers from allergies and asthma. She does not do well when the air filters won't run and sooty candles must be burned for even enough light to be able to safely go to the bathroom! So unless it's "God" living in our neighborhood, or maybe the reincarnation of King or Queen Tut, can't someone get PSCo. to do their jobs right and see that those trees get trimmed?! We are formally requesting that you look into this matter and try to get it corrected!

: More horrible, irresponsible advice.

: I am currently devoting an HTX-202 to packet 24 hours a day, as my
: landline BBS Users access it as a Door.

: Sure would like to hear first-hand experiences when it comes to the
: HTX-202, not a bunch of mis-stated, anti-Tandy sentiment. The HTX-202 is
: a solid, reliable performer. It ain't pretty to look at...it doesn't
: have 500 channels...it doesn't require a mangifying glass to
: maneuver the controls...and I cannot listen to cellular telephone calls
: on it, either.

: But it performs as it is advertised it will - and it does it
: excellently.

Totally agree Clint! Maybe the poster who has had trouble has lousy
packet activity in their area or problems with the Pbbs', or the tnc or
cables. The 202's
are built very solidly and I LOVE mine. I'm going to get another one to
dedicate to packet. I've been using mine EVERY day for almost a year now
and it works and sounds GREAT! Great intermod rejection, sturdy and
sounds GREAT both recieve and transmitting. A LOT of value for your money
as well. The other rigs cost MORE and you have to buy the OTHER options
like a spare battery pack or a higher powered one. I'll keep my 202 thanks!

I agree. I was in the service biz quite a few years, and we considered wet cleaning to be a last resort. This is especially true with older gear that has paper coil forms. At the very least, this rig would have to be considerably disassembled to protect the parts you mentioned above.

Anyway, the guy didn't say the chassis had any kind of film or grease or corrosive liquid on it. He's just trying to remove sawdust and dirt. I'd remove the tubes (be sure to mark exactly where any duplicates go so the rig doesn't have to be realigned), then take it to the gas station and blow it out. Keep the air away from the front panel so it doesn't damage the meter or any fragile dial components.

Whatever dirt is left when you're done, just leave it there. It's a transceiver, not a dinner plate. <g>

Before you buy any amplifier, new or used, check the price of replacement
tubes. IMO, anything made within the last ten years using either 3-500Z's
or 811A's is a good choice. Both tube types are readily available and
offer excellent bang for the buck.

Always replace the driver first in these rigs. Very often it is
all that's needed. Tune up again after, of course. The 6146 is
really rugged but the 12BY7A seems to drop of quite quickly.

Of course you save a bundle replacing the driver only!

Cheers.

2353. Help! TH-78A Question!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-24 00:00:00 UTC
From: jartz@umich.edu
Message-ID: <44481s$mvi@lastactionhero.rs.itd.umich.edu>
Source record: 212008

Hi there. A fellow student here at the university brought his Kenwood TH-78A which he bought new in Hong Kong (where he is from). He gave it to me to look at and program, and I discovered something quite strange.

First of all, it _is_ at TH-78A, not a 78E. It does not have the characteristic 'Tone' button of the 78E located where the 'MONI' button should be.

The radio came with a AA cell holder - not a rechargable battery pack.

Also, the radio recieved from 50MHz to 179MHz on 2meter side, and from 400 to 512MHz on the 70cm side.. and he said he never opened it up. It also transmitted a little bit out of band, although not as far as it received.

Anyway, the radio worked fine but had one main problem. It would NOT send PL tones. I would select the tone, put it in PL mode (the little T in a box would appear in the display), and transmit. But it didn't send the tone. I tested it by turning on CTCSS on my own handheld and confirmed that no tone was being sent. His 78A also did not have CTCSS squelch-decode capabilities.

Although his manual contained no english, there was a section in spanish which we were able to fumble through. We figured out that there is an optional CTCSS decode chip available for the radio.. and we assumed that his radio dosen't have it. But it didn't say anything about the radio not being able to send PL tones without this chip.

Anyone have any information on this? He really needs it to be able to send PL tones in order to bring up the university repeater.

All of the other suggestions are valid ones, and by the way, if you change the finals, don't forget to do the neutralization adjustment.

I would try changing the driver tube first, as the others said. But if the tubes are that old, treat the rig to a new set of tubes.

I recently found a strange problem with a rig that a friend bought at a hamfest, it was a TS-820, which has the same transmitter section as your 520 does.

The rig had low power in any of the "carrier" modes (TUNe, CW, and on the 820, FSK). The problem turned out to be the CW filter. In SSB mode it put out full power. You didn't mention in which mode you are getting low current values. This problem was not frequency dependant, as your is.

When this CW filter was removed from his rig, and placed into my 820, the problem followed it (my rig had the same low output).

I'm not suggesting this could be your problem, but if your 520 has a CW filter, try changing the jumper on the IF card to the "wide" position.

Tom
read your msg on putting these older radios back in service on the ham bands. My son and I bought some Motorola Mitreks and are converting them. These were a matter of recrystaling and replacing one cap and rewinding a small coil. All this is done in the frequency elements and then retuning the radio. I have had good luck with the first one (just finished it).

I would like info on the conversion of a 450 Mhz MICOR.

Let's discuss

: Do you demand that all cb/scanner stuff not show up at your local swapfest,
: too?

: The idea is that rec.radio.swap is the online swapfest. Just as you can find
: lots of different types of electronics at a swapfest, so can you in
: rec.radio.swap. If you don't want what a particular seller has on his table
: (in his post), then walk past it.

: This group was cast as having no forsale posts for a reason: because that
: allows sites that prohibit their use for personal monetary gain (and yes,
: there are some, primarily in the government) to carry this group and not
: carry r.r.s, and thus keep themselves out of trouble. If you insist on
: posting for sale messages to this group, those sites will drop it. You may
: not like that state of affairs, but it's reality.

This post, the above paragraph in particular, is the best of the group.
Instead of simply restating what the charter says, Jay gives good reasons
why "for sale" ads shouldn't be posted in the rec.radio.amateur.* hierarchy.

The time has come to do one of two things: go through the formal process to
create a new newsgroup, or drop the subject...forever.

I'm not that familiar with the process, other than knowing that a new group
is first proposed on alt.config, followed by a request for discussion, then
a call for votes. Gary, it sounds like you have the appropriate knowledge.
What does everyone think? Continued debate on this topic is pointless.

Here's my informal proposal:

Create the new group rec.radio.amateur.forsale. This naming convention is
widespread on the Net, is more intuitive than .swap, and maybe it will
alleviate the posts to other parts of the hierarchy.

All suggestions, flames, etc. are welcome.

> Thanks......
> Rick Crider
> KD4FXA
> <rickcrider@aol.com>

I have resolved ignition noise by shielding it at the source. This is
particularly difficult for operating HF from the car. I have copper
shield (hollow braid) on my spark plug wires, and a copper box over
the distributor. This made a dramatic difference in my ignition noise
on HF.

You might also run the ground wire direct to the battery.

2373. IC-706: Does it have CTCSS?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-24 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDFDvus.AuI@netcom.com>
Source record: 212094

One thing about the new Icom IC-706: even if the HF portion is not the best, $1299 or less is a great price for a 6M/2M all-mode transceiver. I am just curious if the unit is equipped to generate CTCSS tones, and can they also be stored in the memories?

Looks like a great rig to me, but I have not been able to learn too much about it. For SSB/CW work on 2M, 10 watts is not really enough power, but it is certainly enough to drive an external amplifier.

Any info will definitely be appreciated.

I would have to agree. However, I have to say at this point that this
is the first I have seen of the above include. My site must not be
getting all of them. The points Jay made are good ones. But, my point
still stands. See below.

>The time has come to do one of two things: go through the formal process to
>create a new newsgroup, or drop the subject...forever.

>I'm not that familiar with the process, other than knowing that a new group
>is first proposed on alt.config, followed by a request for discussion, then

>What does everyone think? Continued debate on this topic is pointless.

If I am the "Gary" you referred to, I don't have the knowledge of how
to start a new group. But, I think it is worth considering. I still
say that I don't, and won't, wade through a bunch of non-amateur
postings to find something. That group is far too active and takes
too much time.

>Here's my informal proposal:

>Create the new group rec.radio.amateur.forsale. This naming convention is
>widespread on the Net, is more intuitive than .swap, and maybe it will
>alleviate the posts to other parts of the hierarchy.

Forsale is too confining. Are you then going to make a separate group
for WANTED and TRADE? It isn't practical. A better name is needed.
While the difference is subtle, rec.radio.amateur.trader seems more
appropriate. Just an idea.

I feel like I'm jumping into the middle of this, since I have
obviously missed some posts in the middle. However, from the use of
the name Gary, and the cb/scanner quote in the other message, I'm
assuming they are comments made in reference to my post. My apologies
if they are not. I'll butt out. :)

Why get so defensive?
Just what I have heard on 20 meters. Usually when hams talk about these
things, they don't make it up, nor do they do it in a bad way.
Just to put you at ease, I will try to find out what problems
specifically have been reported in Europe, and get back here.
Also, somewhere in England there is a WWW site with lots of chatter about it.
Hope I haven't ruined your day or anything like that.

I seem to have a problem using my KAM (v5.X) with my FT-1000.
It seems that my transmit and receive frequencies are offset
by approximately 400Hz. If you have any suggestions, they
would be most welcomed.

Set-up:

1. KAM (5.X firmware) connected using a custom cable with separate
connectors for CW key-in, Packet, and RTTY on the FT-1000.

2. FT-1000 PKT/RTTY dip switch #5 set to "reverse". At first,
the rcv was okay but the xmit was "inverted". Changing this
dip switch on the top of the FT-1000 at least made both sending
and receiving "intelligible" (with another local station).

3. Software is Host Master for Macintosh 2.2b. (yep - that's right, I
use a Mac :-)

Any suggestions what I ought to try next? To be frank, I don't recall
ever operating RTTY (nor amtor/hf packet) with the KAM/FT-1000 combo.
I have used the KAM on RTTY in the past with my FT-757GX/II ... but
it's been a couple of years since I've tried HF digital. ;-(

2385. 13" Pro Am scanner antenna ok for 2m transmit?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-25 00:00:00 UTC
From: maverick@csulb.edu
Message-ID: <445f0c$rkc@garuda.csulb.edu>
Source record: 212023

Hi,

I was wondering if anyone knew if the Pro Am 13" scanner antenna (its a mobile mag mount made by Valor), is okay to transmit 2 meter at 5 watts, without damaging the HT? The package claims it works and is safe, but I want some 2nd opinions.

Feel free to reply to me directly if you wish. Thank you for the advice.

Sincerely,

Hiran

>Many HT's can be modified to transmit beyond their "normal" range. However
>modifiying amateur equipment to do this is generally illegal.

Geoff,

Seems you have not understood the basic concept of amateur radio.
Amateur radio is by definition experimental, with the effect that
you are entitled to built and operate transmitting equipement.

(In some countries having built a TRX is a requirement)

As a result, the transmitting range of amateur radios is not
subject to regulations (In fact *all* commercial HF TRX are capable
of out of band transmissions)

The point is that responsibility not to actually transmit out
of band rests totally with the licensee.

Bought mine this weekend at the Virginia Beach Hamfest. There are four different keypads available, and I bought the one that allows 99 memories, DCS (digital coded squelch), DTMF memories, etc. Cost was about $275.

Witht the high-power battery the unit is a little large (deep), but the 600mah
battery makes the unit fit nicely in your hand. Each battery has a rather rugged belt clip built-in, which tends to make the unit feel a little deeper than it is.

Most outstanding feature is RX audio, which is wonderful and a great change from other small radios. Amazingingly loud and clear.

Unit seems to program much like other Yaesu products. The pot on the top of the unit utilizes a concentric knob for volume, and can be pushed in to go into a setup mode. Seems handy and programming the unit was a breeze (although admittedly, I have had a number of Yaesu HTs before).

TX audio seems very good, too.

Unit itself appears to be exceedingly rugged and more like a commercial HT than an amateur-band unit. The front bezel looks like it might scratch, though.

Intermod rejection at the fest seemed excellent. RX sensitivity seemed somewhat better than the 51 (subjectively) with the stock antenna, especially out-of-band.

I have only had a little time to play with it, and will try to post something more later.

No modern HT should be damaged by even a very mismatched antenna. And the
comments on your package should further reassure you of this.

A question you don't ask is whether is will work well. And this is just
as well as I don't know the answer :-)

Just guessing, but you may have an import duty or a hidden VAT in
that price that we don't have. You're also a lower volume market
which may mean higher markups are required.

It's likely that your KAM and the FT-1000 are not set for the same tones.
I recall the default MARK frequency is 2125 Hz in the FT-1000 while KAM
uses 1600 Hz (525 Hz offset). Check the respective manuals to set the
two devices for the same tones.

Message-ID: <1995Sep25.212317.9451@oasis.enmu.edu>
Source record: 212046

The HTX-202 is a very good rig for a new ham. It only has two small problems. First, it does not have the extended recieve that most of the other 2 meter handies have.

Secondly, it is very difficult to use it on packet. If you are planning to use it with a baycom tnc, FORGET IT! Some tnc's how ever have little trouble working with the 202.

One very important thing! If anyone tells you that it is possible to mod the 202 for extra recieve and transmit, TELL THEM THAT THEY ARE CRAZY! Congrats on the new ticket 73 - Jory McIntosh - KB5UBS

: >
: >1) ...rec.radio.swap may not be the most intuitive name for the newsgroup.
: > Lots of users post without reading the charter; some just do not care
: > and

: This certainly is not the "best of name" for HAM radio. As another
: poster stated, it would be very foolish to think that any conference
: with a "radio" in the name would be **only** about HAM radio.

It would be rather silly to segregate rec.radio.swap into multiple groups. Personally, I like seeing the ads for R-390's, scanners, etc. It's not exactly a strain to skip over the ones I'm not interested in.

: There is a conference called "rec.ham-radio.swap" that I get and there
: has **never** been one message in it. I have subscribed to this
: conference for over 2 months now, and nothing is ever in it.

That's because it's a bogus group. Your news administrator apparently isn't taking the time to ensure that only valid group are offered.

: >2) ...that some users, on many newsgroups, take things far too seriously.
: > Posting "for sale" ads on this newsgroup is not the end of the world.

: Isn't that the truth!

No, but it's extremely rude, especially to the people who pay for their news feeds, and aren't interested in getting the FS messages. It doesn't take a rocket scientist to figure out that a "swap" or "sale" group is the appropriate place to post such messages.

: As another poster stated, with the amount of FS/WTB traffic, the so
: called "charter"

It's not "so-called." That's the proper term.

: should change with he "desires" of the users (as is
: obvious by the traffic).

It's far from obvious, as most people are polite enough to respect
the charter of the group. Those who aren't polite enough, or are just
too lazy to change their newsreader to the correct group, simply
make themselves look like idiots.

: Of course, that may be too difficult for
: those in charge of the conference to understand!

First of all, there is nobody in charge of this group. Secondly,
there is a long-established mechanism available for modifying group
charters and creating new groups. Check out news.answers for the
relevant details.

The AF-68 is a 160-10 AM-CW-PM transmitter of late 50s vintage, both VFO and crystal controlled, at about 50 watts output. It had a companion receiver called the PMR-8 and DC power supply for the car. Not much more to say about it except that it was a standard osc-driver-final xmtr of the period and that the plate modulation was excellent. I used an AF-67/PMR-7 combination (earlier version of the same radios) on 160 meters in Corpus Christi, Texas in the early 60s. We also used it during Field Day in 1962 at Rattlesnake Point on Aransas Bay at the W5MS Club in Corpus. The glow was beautiful at night from the large dial plate of the AF-67 and the little square box of the PMR-7.

Actually, of the all the HT600 / P200 / MT1000, I have worked on over the years, most, if not all, would handle a band split this wide quite easily.

In my MT1000, 99ch. I have freqs from 144-163. Works quite nicely Thank You.

You will note that the reason he is defensive is that he bought one or has some deal testing one(see other message from him saying he will be on the air with one). It is a common human trait to believe you did the right thing. What amazes me, however, is how hams seem to be getting all excited about anything that is new, or for that matter, claims to be new and hot. It has been interesting to read messages here and on other nets that demonstrate great excitement about new radios only, as far as I can gather, because they are new. We hear comments like; "it is a dream radio", "it sure looks great", "the layout of the front panel is really cool" and so on. I guess hams are not interested anymore in good, solid basic radio performance. Instead they want cute, little, barn door front ends with lots of little glowing lights and complicated menus. Seeing the responses to the 775, 1000MP, 870, 706 and so on demonstrates this quite well. It shows that the manufacturers know what buttons to push (no pun intended) and that their marketing is excellent. It has been my experience (I've owned 18 different HF rigs and was a victim of this mentality) that new is not better and new rigs genrally have gremlins. Despite this, the demand is generated by marketing and the make it cute concept. It amazes me how hams will stand in line for something that only claims to be good or even makes no technical specification claims of any importance at all!

You're right Moritz, it isn't illegal to do the modification, just
illegal to use the modified radio outside the amateur bands. Of course,
there seems little point in doing the mod if you aren't going to use the
radio. In some cases, the FCC has declared that possession of radio
equipment capable of being operated illegally is prima facia evidence
of intent to violate the law. I'm thinking here of modified amateur
equipment capable of operating in the Class D CB band, but that could
also apply to HTs modified to violate the ECPA or perhaps to those
modified to operate where they aren't Type Accepted. There's no guiding
case law yet in these latter situations, but if the abuses continue,
there might be.

Yeah, you can. The neatest way is through the bottom, but you have
to slide the battery off to get to the switches. It still is a pain
compared to being able to store the tone with the frequency in a
memory.

I have just gone through some problems with my KAM+ and IC-765 combo that may be of help to you. First of all I had to go into the KAM+ configuration and change the filters for mark and space. The KAM+ as shipped from the factory is not set properly for FSK standards. The second area is the watchdog timer in the KAM+. I found that the IC-765 would drop out of Xmit while the Xmit buffer in the KAM+ was still spewing out characters. On the advice of a friend (K0RC - Bob) I scanned the KAM+ manual for reference to a watchdog timer. Sure enough the KAM+ is equipped with timers for both the VHF and HF ports. This timer will cut the PTT line if you try to transmit for more than 2.5 minutes straight! To disable the HF watchdog timer, open up the KAM+ and locate the K4 header (K5 is the VHF watchdog). Place the K4 header over BOTH pins to disable the timer. No sweat! Works FB now. GL & 73'sslay@netcom.com (Sandy Lynch) wrote:

2422. HF rig on battery power. Erratic output. Suggestions?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-26 00:00:00 UTC
From: scicon@ix.netcom.com
Message-ID: <449754$rpj@ixnews6.ix.netcom.com>
Source record: 211961

I am trying to run my Atlas 210x rig from a 6.5 AH gel-cell battery in my version of the 'camper's portable ham shack' I built from an article in QST (I think it was last April).

The problem is that I can't get the rig output power to stabilize. It's very erratic, jumping from 4 to 50 watts. Of course when it jumps up, it sucks the battery dry! When I turn the knob my power meter jumps all over the place. I'm trying to get it to run at 5 watts, but it won't stay.

When I connect the rig back to the power supply in the shack, it works normally, allowing smooth, stable output adjustment from 1 to 100 watts.

What am I doing wrong?

Do I need a ground rod? Do I need to put filter capacitors in the battery supply line?

I don't have any experience running an HF rig on battery power (outside of a vehicle), so I'm probably missing the obvious.

Thanks and 73 de Dan, KE6LBX

I use an ATLAS 210X as my primary HF radio.

The ATLAS 210X has two -12V inputs. One of these inputs, per the manual,
is supposed to be regulated, relatively low current. The other input
does not need to be carefully regulated, and drives the RF amplifier
section(s). I have also had poor success operating off battery.
In fact, I only transmit from my car with the motor running. I suggest
that you try two batteries, one for each input, and see if that solves
the problem.

Note that many radios are picky about voltage, and exhibit FMing and
other problems when operating from a battery at about 12 volts.
(I have done considerable portable and backpack operation, mostly
for VHF contests).

73 and good luck
Richard Ferguson KA0DXM

My opinions are my own, not those of my employer.

2424. Two-tone FM deviation test? HELP!

: jwittich@b4pph107.bnr.ca *** CW ops let their fingers do the talking.
: AC4ZO *** BNR claims they know nothing of my employment here.
: **

Ah, at least I'm not the only one with am MFJ keyer problem. FWIW I did
not install the 9 volt battery (optional in the manual) and was running
off of a 12v - 1 amp wall wart power supply. The dot length was consistent
but the dash length went long periodically on key down. Quite a booger to
send with. If you alternated hitting the paddles, the sidetone wandered
up and down.

I returned the keyer last weekend.

My evaluation is that the microprocessor based 422 keyer has a serious
software bug.

I guess it's time to order a Curtis chip and build a keyer that works
properly.

As always YMMV.

Message-ID: <449mnm$uve@osh2.datasync.com>
Source record: 211965

I don't think that AZDEN is any longer in service, there is a company that bought them out who sells the radios, but I don't know about service. And if thay do service, I don't know if thay would be able to service an AZDEN that is that old. I don't know if this is going to help, but you can try one or both of these... (516)328-7501(voice) or you can try writing to: AZDEN CORPORATION, 147 New Hyde Park Road, Franklin Square, Nnew York, 11010

See the only reason why I say "I think" thay no longer have service is because I once owned a PCS-7000H, which is their latest model avaliable, and thay wouldn't take it back for a repair on LCD display problem I had, so I ended up selling to someone for a low price and bought a KENWOOD TM-241a instead, Much better radio in my own view... Hope this helps.. Jimmy, KB5FSV CAP-MockingBird484

2431. RC96 + RBI1 + TM721 = No worky?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-26 00:00:00 UTC
From: otoupal@astro.as.utexas.edu
Message-ID: <449q1f$5c1@geraldo.cc.utexas.edu>
Source record: 211970

Short form: I hooked up a new Doug Hall RBI-1 interface between the clubs ACC RC-96 and a Kenwood TM721. I can't get the Kenwood to changes freqs, transmit, or receive. Any ideas??

Long form: As part of an on-going repeater system upgrade, the club decided to purchase a Doug Hall RBI-1 remote base interface box to make the remote base both dual banded as well as frequency agile.

I purchased the RBI-1, picked a saturday, and carted everything into the repeater room.

I hooked up the RBI-1 to our new ACC (bless their souls) RC-96 running version 5 software. Connection went to the remote base connector. Then, using the supplied cable, I hooked up the clubs Kenwood TM721 dual band mobile. Pressed reset on the RBI-1 and was rewarded with the expected light and sound show that indicates everything is hunky-dory.

I then spent the rest of the day trying to get the thing to work.

Getting late and wife considering hitch-hiking home, I downheartedly pulled the new toy off the RC-96 and headed home.

Safe at my bench, around all the test gear, I first hooked the new RBI-1 back up to the Kenwood TM721 and the clubs old ACC RC-85 (V1.1). Same errors. Humm. I had a Kenwood TM-731 laying around so swapped it out with the TM-721. Same errors still. Well, all that's left is either me or the new RBI-1. Gave the folks at Doug Hall a call and they were glad to have a look if I'd send the RBI-1 in to them.

A week passes by and the RBI-1 comes back with a note indicating a clean bill of health! Egads. Hooked it back up on the bench and, sure enough, same symptons.

That leaves only me as the problem. I'm stumped. Any ideas?

A few notes: I'm getting a data stream from the RC-85 to the RBI-1. I'm also getting data from the RBI-1 to the Kenwood. PTT signal is getting from the RC-85 to the RBI-1 but the RBI-1 is NOT sending PTT to the TM-721. Likewise, I am NOT getting COR from the RBI-1 to the RC-85. I did remember to turn off the HF Remote Base prefix on the RC-85. The RC-85 is reading back the frequency that I am trying to get to. The remote base did work with just the TM-721 after I had moded it for a COR output. About the only thing I have been able to do is get the TM-721 to switch bands when I tell it to.

The folks at Doug Hall have been very accomidating but are just as stumped as I am.

Any ideas? Post or email is fine. I'll post the answer if there is enough interest.

2432. MFJ Six Meter Xceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-26 00:00:00 UTC
From: gamma7@ix.netcom.com
Message-ID: <449ois$5j4@ixnews7.ix.netcom.com>
Source record: 211971

I fellow ham on the QRP list mentioned to me that another ham had a prototype of an MFJ six meter transceiver (probably similar to the MFJ Travel Radio - 9420). Does anyone else have any information on this? This could be a real boom to helping people get on six SSB at a minimal expense and without a transverter. I wrote a letter to MFJ last summer asking them to bring out a six meter version of the Travel Radio but they never commented back. I'd really like to get my hands on one. Anybody else interested?

Regards,

Duffy - WB8NUT

2433. Any AEA DSP-2232 users out there??

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-26 00:00:00 UTC
From: willhelm@ix.netcom.com
Message-ID: <448cbe$6ko@ixnews4.ix.netcom.com>
Source record: 211972

I have been contemplating the purchase of an AEA DSP-2232 terminal unit. These things are showing up at reasonable prices now on the used market. I have had several PK-900'S and have been happy with them. What makes this DSp-2232 unit more desirable than a standard PK-900?. Is the digital circuitry (meaning the DSP capability) really that better as far as performance? I know that the standard DSP-2232 comes equipped with 9600 baud capability but is that the major difference? A year or so ago i saw some discussion among 2232 owners that was aimed at AEA indicating they felt they had been "abandoned" by not receiving any additional tech updates or modes that were promised for this unit. I believe one in particular concerned the SSTV capability that was supposedly forthcoming for this unit (but i guess never did). Can anyone shed any light on this controller and whether or not i should grab one or just go with the standard PK-900. Any help and comments will be greatly appreciated.

Thanks in advance....Bill in Las Vegas, Nv.

Hi Sandy. I thot you had this solved by now.
Make life easy... give us some more info:

How have you determined the 400-Hz offset?

Is your TX freq. above or below your RX freq?

Have you adjusted your SHIFT control (from center) to center the RX signal?

Does the KAM have a tuning indicator for RX? Is it centered?

Is the KAM set to decode standard RTTY shifts, or 1600/1800 Hz? (Note that
these are about 400 Hz from the standard shifts).

Good to see you on. - Ed.

2435. TS-870

I used a friends TS-870 for an hour or so and was definitely not impressed. I'm mostly a CW DXer and contester. The DSP
sounded pretty much like my trusty TS-850 with a Timewave filter. (I have a Timewave and virtually never use it!) I tried the
radio on some weak signals on 75-meters and the DSP did nothing to make the signals easier to copy.

: >Many HT's can be modified to transmit beyond their "normal" range. However
: >modifiying amateur equipment to do this is generally illegal.

: Geoff,

: Seems you have not understood the basic concept of amateur radio.
: Amateur radio is by definition experimental, with the effect that
: you are entitled to built and operate transmitting equipement.

In the United States, which was the country in question, it is illegal to modify equipment to transmit out of band, such as converting a ham radio to CB. It is also illegal to use modified ham equipment in most other services. Several times the FCC has fined ham dealers for modifying or offering to modify ham equipment to transmit out of band.

While it is legal for a ham in the US to build a radio that transmits out of band (as long as it also transmits in band), modifing one a factory built one for out of band transmission has been interpreted as evidence of doing so.

: (In some countries having built a TRX is a requirement)

: As a result, the transmitting range of amateur radios is not
: subject to regulations (In fact *all* commercial HF TRX are capable
: of out of band transmissions)

Not in the US. Most transmitters are limited to transmission in the US ham bands. While most HF TRX are easily modifiable, they are not sold that way.

: The point is that responsibility not to actually transmit out
: of band rests totally with the licensee.

Yes, that is true, but in the US, you cannot get FFC aproval for a HAM transmitter that transmits out of band, which effectivly eliminates it sale (as a retail item).

73,

Geoff.

Source record: 211981

I recently bought an IC-730. The radio works great, but with the congestion on 80m and 40m, I find myself wishing for more selectivity. The radio has a front panel switch for CW-N, but the option is not installed. While Icom no longer makes a filter for the rig, ICRI (International Computer and Radio) offers an aftermarket unit for about $100 that they list as "wire-in". Has anyone out there done this installation? Though install doesn't seem too hard, I don't want to get in over my head. Recommendations?

Check the RF power using a DUMMY load.. The problem May be in your
Antenna system.... Also If you are using this radio For AM (CB) your
lucky to get the 50 watts... I think it is preset to 25 watts for AM...

>It seems that my transmit and receive frequencies are offset
>by approximately 400Hz. If you have any suggestions, they
>would be most welcomed.
>
I use a KAM with a TS-930 and use the RTTY FSK input. This allows the
radio to determine the offset, not the KAM. In other words, the KAM
is only switching the radio's FSK offset, as opposed to using the AFSK
feature where you actually feed tones into the audio input of your radio.

Check your FT-1000 manual to see if you can set the shift frequency, 'cuz
there really isn't anything the KAM can do unless you're using AFSK. If
are using AFSK, check the KAM manual because that can also be adjusted
for 170 hz shift, or whatever, as I recall.

>Please post or email if you can help.
>Thanks in advance...
>==
>Stephen Chu
>AT&T
>Internet : shc@mtgbcs.att.com
>==

Well, Steve, don't worry about comparing VHF/UHF cause GMRS by
definition is UHF only. 462MHz thru 467MHz. We use them heavily in
REACT.

The best GMRS radio is the cheapest. :) Actually, it depends
upon what you are wanting to do with it, and how far away from the
repeater you will be running.

If you want cheap and no repeater, Radio Shack sells a piece of @#$#
that I wouldn't even take time to bring home. It works for short
range, but is crystal controlled and no tones can be installed for
repeater usage. You get what you pay for here.

You want PROGRAMMABLE, MULTI-CHANNEL radios only, preferably 6-10
channels, but that depends upon how many repeater freq's you can
access in your area. In San Antonio, we have 3 GMRS repeaters
operated by the REACT Team, so we need at least 6 channel radios down
here. (3 repeater, 3 simplex for same freq's)

H/T's should be at least 4-5 watts. Those 2 watts work good if you
are in unobstructed terrain and close to repeater. Otherwise, you
need the extra juice.

Maxon makes an affordable 10 channel GMRS H/T called the 210+3 model.
First 7 channels are those GMRS Interstitual channels (simplex only).
Last 3 channels are programmable for repeater freq's with tone and
simplex/duplex splits allowed. You can change the tone encodes from
the keypad, so that's a plus. The low wattage is a minus. They
were supposed to come out with a 5 watt model and drop in charger, but
I haven't seen it yet.

Motorola always is a good bet, but you'll pay for it also.

Mobile radios. You want at least 15 watts or more. You are limited to 50 watts by FCC rules. Again, look for multi-channel programmable. You won't find new radios that are user programmable cause the FCC changed the rules years ago to prevent that. (Too much abuse)

Okay, now here is "not" a recommendation. Many/most Amateur Dual Band and 440 UHF radios can be "fixed" to go up into the GMRS band. I know of many people who happen also to be licensed hams, that are running modified ham radios so they don't have to buy another radio. This option, while highly illegal, is considered to be cheaper than buying commercial radios, and is much more flexible. Remember, I am not recommending that you do this.

Best of luck, and contact me via e-mail if you have any further questions.

Hi Dan... You can tap the signal meter from any one of the band units.
Pin 10 of CN1 (there are 2 connector strips on each module..CN1 and CN2)
which is the "SM" line...short for S-meter. This is definitely the
S-meter line...it comes directly out of the FM receiver chip of each
module and goes into an anolog to digital line of the CPU in the main
chassis. I speak from many hours of hacking experience on these radios.

Regards..

2453. Anyone know how to program speed dial on Siemens Eurodial 2220

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-27 00:00:00 UTC
From: shustak@parkcomm.iii.net
Message-ID: <44aebm$8tt@news.iii.net>
Source record: 211983

I know this is not a piece of ham equipment, but hams collect all kinds of junk. I figured someone might have an answer.

I salvaged an old Siemens 2 line telephone, model Euroline 2200. It has 22 speed dial buttons, and a digital display. I fixed the malfunction, but cannot figure out how to program the speed dial buttons. I tried the usual methods (keying in the number, and then hitting "mem" and then the button) or some combination thereof, but nothing works.

Can anyone help? An owners manual didn't come with the phone.

From: bb840@scn.org
Message-ID: <DFJMAM.HEp@scn.org>
Source record: 211985

A few months ago I bought a DX-160 general coverage receiver, which unfortunately did not come with the user manual. I need some information about the antenna and ground connections.

There are three screws on the back: A1 A2 G and there is a jumper wire between A2 and G. I think A1 is for a long wire antenna and A2 is for a short wire antenna, but I don't know why there is a jumper wire between A2 and G, unless that is substituting for a short wire antenna.

Can anyone confirm for me the functions of A1 and A2 and the purpose of the jumper wire, or if the jumper wire should be removed?

From: k0od@mo.net
Message-ID: <44ahf6$5uf@Twain.MO.NET>
Source record: 211986

The Kenwood ad on the inside cover of the October QST says in regard to the new TS-870:
"IMAGINE OVER 100 DB OF
NOISE REDUCTION WITH NO SIGNAL LOSS!"

WHAT THE H--- DOES THIS MEAN? I have used a TS-870, and on 75-meters, with the DSP Noise reduction turned on,
the S-Meter read over S-9 just as it would on any other radio, including my TS-850.

Aside from Kenwood ad, I'm getting pretty sick of all the other over-hyped DSP noise reduction claims. One ad says their
DSP transceiver will "hear signals you've never heard before!" Mr. Manufacturer, how many of the top contest stations are
racing to trade in their FT-1000s or even their old TS-930s for these new boxes. NOT MANY! In fact, I know one old-time DXer
who has bought several of the new-generation DSP radios and returned them all!

The same goes for those outboard DSP boxes. I wish I had some of the money being wasted by guys who buy one after
another of these gizmos. I have 310 countries worked on 40-meters and 250 on 75/80, and a wall covered with low band
contest certificates. I do have a DSP box (doesn't everyone!), but it's virtually worthless especially for noise reduction.

I quite agree with you, however, in the case of this 706, it is very
small, has HF,2meters and 6 meters, all in one radio, which is very
appealing.

From: mwhite@mitre.org
Message-ID: <mwhite-2709951405000001@m14494-mac.mitre.org>
Source record: 211993

I have a chance to buy an old IC-22S 2 meter xcvr real cheap. This is a diode-matrix programmable rig; I want to use it as a simple voice base station for the local repeater. My questions are:

1. What is the frequency range of the radio; specifically, will it operate below 146 MHz?

2. Can you re-program the matrix to give different frequencies or ranges? If so, what ranges are available?

If someone has a manual, that would be a big help. Thanks for any info.

Mike, N4PDY

Jory McIntosh (Mcintosj@ziavms.enmu.edu) wrote:
: The HTX-202 is a very good rig for a new ham. It only has two small
: problems. First, it does not have the extended recieve that most of
: the other 2 meter handies have.

This is not a problem, it's a feature. By not having extended receive,
this rig has a tighter, more intermod-resistent front end.

I utterly fail to see the reason why hams today insist on having super-wide
extended receive capabilities on their HTs. Is it because most hams are
lurkers who spend more of their time combing the public service bands and
cellular bands looking for something interesting to listen to than they
spend communicating with fellow hams?

I really got a good laugh a few days ago when someone asked how he
could modify his new 2m HT to listen to cellular phones (800MHz)!

Bottom line: if you want to listen to cops and tow trucks, buy a scanner.
Me, I'd rather have a rig that covers the ham bands only with reasonable
RF performance. Such an animal is difficult to find these days--that's why
I switched to Motorola.

>these little beauties.

I don't think it has an internal power supply, so if littleness is an issue, consider that you'll need a chunky supply to feed it. I bought myself an IC736 *because* it had an internal power supply; my IC729 was nice and small but sitting on top of its supply, well, it wasn't so small anymore.

On the other hand, for mobile operation, the 706 is probably killer. I'm only assuming that because you have a 736 you're working base.

I think that in time they'll probably create a rig analogous to the 736 that also has 2M support. That seems to be the pattern.

Can anyone offer any suggestions as to what may cause the RX on the AM and FM modes on a YAESU FT757GX to go sour (completely dead). Rig does not have any carrier power in these modes either (although the TX light does light up). I does a fantastic job on SSB and CW. Good recieve sensitivity and great signal reports. It is just dead on AM and FM. I am happy with the rig currently, but plan to upgrade soon. Would like to work some of the 10m FM repeaters around. Any suggestions would be greatly appreciated. If you have more specific questions, please contact me by e-mail. It might help to know that the previous owner used the rig mostly for RTTY.

>jumper wire, or if the jumper wire should be removed?
>

Normally, "A1" and "A2" would be "balanced" antenna terminals, for example for 300 ohm twinlead, and "G" is "ground" (the chassis connection). If you are using an "unbalanced" feed system, the "hot" lead (long wire) would be connected to "A1" and the ground lead to "G." If you are using a "balanced" antenna (a dipole) the leads connect to "A1" and "A2" and the jumper between "A2" and "G" wold normaly be removed.

I don't have an DX-160 and/or manual so I can't confirm the information is the same for that radio as most similar radios.

Hello Geoff,

>In the United States, which was the country in question, it is illegal to
>modify equipment to transmit out of band.

Surely it is not illegal to increase the transmit range if you want
for example to use with a transverter.

>Several times the FCC has fined ham dealers for modifying or
>offering to modify ham equipment to transmit out of band.

Surely only if this was obviously done to sell it to non-ham users.

>While it is legal for a ham in the US to build a radio that transmits out
>of band (as long as it also transmits in band), modifing one a factory built
>one for out of band transmission has been interpreted as evidence of doing so.

We all know, that legislation and court ruling is not always related
to logic and justice, however, in a country where carrying a gun generally
seems not to be regarded as evidence for murder this seems hard to believe.

>Most transmitters are limited to transmission in the
>US ham bands. While most HF TRX are easily modifiable, they are not
>sold that way.

Well, I have yet to see a HF radio that can be customized such that
it transmits only within ham bands. I can also reassure you, that
my Ten Tec Scout 555, purchased *in the States*, transmits out of band,
in particular in a portion below 10 m, normally occupied by (illegal?)
CB'ers.

Two words, Type Acceptance.

GMRS and commercial/police/fire/marine two way radio service rules require it, no amateur radios have it. It's that simple. Amateur radios don't have the necessary approval to be used in another service. Now you *can* sometimes take a Type Accepted radio and have spare channels programmed with amateur frequencies by a service shop, so you *can* use one radio for both services. But you can't go the other way. Amateur radios don't need, and don't have, Type Acceptance, but radios for other services are required to have it.

This is a separate issue from licensing. Amateurs are required to have an operator's license as well as a station license. The other services just require a station license. For the other services, that station license requires use of Type Accepted equipment. Amateur station licenses don't have that requirement because operation of an amateur station also requires a licensed operator who has passed a test that supposedly makes him competent to insure legal operation of the equipment. Operators in the other services are assumed to be incompetent boobs who must have radios that can't be used off their assigned channels, or at improper power levels, etc. To insure that, the radios have to be Type Accepted. One of the Type Acceptance criteria is that the radio not be able to be user programmed off its assigned channels. That obviously doesn't describe most amateur equipment.

>
>Has anyone used this technique or know of references?

Charlie, the two tone technique is used to set depth of modulation
of an AM signal. You can set FM deviation using the Bessel null
method with a single tone.

To use the Bessel null method, you either need a spectrum analyzer
or a selective SSB receiver. Display the signal on the analyzer or
tune the SSB receiver to the carrier frequency. Now introduce a
1247.4 Hz sinewave to the modulation input of the radio. Increase
the amplitude of the tone until the carrier nulls out. That amplitude
is now the correct value for 3 kHz deviation.

The A1 and A2 are for a balanced or twin-lead fed antenna (no part of the
antenna grounded). A1 is for an unbalanced long wire, in which case A2
and GND should be shorted

I threw my one Bencher key in the garbage a long time ago .....

The G4PZY VHS iambic is a fine key -- and beautiful to look at. Also, quite expensive.

Other keys I like: The Jones Key (available through Palomar) and the good old reliable Vibroplex Iambic (but not the Brass Racer).

For what its worth, I find the Vibroplex to be the best, smoothest operating key of the lot and the one I use the most. I don't think that anything is any better.

2485. TS-700S SSB problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-28 00:00:00 UTC
From: "Glenn T. Lechner" <glechner@nova.gmi.edu>
Message-ID: <44e9ef$b9n@wheel.gmi.edu>
Source record: 211923

I have a Kenwood TS-700S that is transmitting carrier in SSB mode...about 2 watts in USB, about 3 watts in LSB. Is this a carrier balance adjustment? Anyone have the service manual who could point me to the proper board and components? Or, could you tell me where I might find a service manual for this radio?

Thanks.

Glenn NV8T

>Why would that be illegal?

Because Amateur Radio gear isn't type-accepted on the GMRS band. I'm pretty sure that the deviation on GMRS is different than that on the Amateur bands. Use of non-type accepted gear is a no-no in the GMRS band.

If I remember correctly, there is a test for FM deviation that makes use of the sidebands generated by one single tone of a carefully chosen audio frequency. At a certain deviation the amplitude of one of the sideband components of the FM signal becomes zero. On an SSB (AM?) receiver one should then be able to hear the interference disappear. I have done this test to set the maximum deviation of my homebrew FM rig, but that was long ago and the rig is now defunct.

I remember seeing the method described in the Radio Amateur Manual for 1994 by the ARRL. Or at least the theory behind it.

So, read the FM (pun intended).

I've tried several paddles over the years and the two that I like the best are the Mercury which is made by N2DAN and the Schurr. The Mercury is my hands-down favorite but also expensive. The Schurr paddles and keys are also beautiful and operate in an extremely precise manner. As per the other note, the Vibroplex iambic is also a great key.

>
>Has anyone used this technique or know of references?

Never heard of it. Actually, you just need one tone to
set the deviation. The problem most people run into with
measuring the deviation is somehow monitoring the output
with a calibrated instrument. A spectrum analyzer works
great--I use an HP 8563E to measure deviation in
the ARRL Lab.

Not sure what two tones would buy you--it doesn't solve
the problem that the most handy instrument, a 2 meter
FM receiver, often has unknown filter and bandwidth
characteristics that make it useless for accurately
setting deviation. If you have an SSB receiver, you can
use what is known as the Bessel null method, which involves
nulling the carrier with a single audio input tone.

The mod for the radio is not illegal but its use would be. The radio
is not type certified for that use. Many people do it however.

Drew,

You've gotten plenty of comments by now on the radio, so I won't add to the mess. I will, however, advise you NOT to pay $199 for it (unless you're in a big hurry).

Do you have a big hamfest coming up anywhere nearby? At the Dallas Ham-Com this year, Radio Shack had an entire 18-wheeler full of goodies, including refurbished HTX-202s. These factory-reconditioned units were going for $75. Interesting thing was they would also sell you the same service agreement that is available for new merchandise. So, for about $100, you could get a like-new reconditioned unit and a service policy to guarantee the work.

Another option would be to buy the Maxon(?) equivalent radio. I have been told that these may be had new for a street price in the $125 range. I believe one source is El Paso Communications, but I don't have their number.

Good Luck!

I haven't tried the G4PZY, but I really love my Kent paddle. It's
very solidly built, has a smooth feel, and is reasonably priced,
especially if you buy it in kit form.

Hi Marty,

Well, I already "took the plunge" and bought a new 202 for $199 (yeah,
I'll admit...I was a bit anxious to get on-the-air :-)

But then again, I still have about 10 days left on the 30-day return
policy...so if I can find something better by then, I'm game. The Maxon
sounds interesting as does a used 202 for $100 with the TSP included.

Can I find either of these anywhere around Charlotte?

My question is, has anyone every been caught for using a non type accepted
radio in the GMRS band (or commercial). How could the FCC tell what type
of radio you are using without sitting in the car with you?

Don't know about G4PZY paddles. Hope they aren't like G5RV antenna. I've had benchers and think they feel to light. While at the Dayton fest, I fell in love with a Schurr paddle. This baby cost 230 bux but man, what a feel. I went over to the dealers both and bought one. He was cheaper than the importer. They come from Germany and are hand made. Try calling the "Ham Station" in Evansville, IN if you want one. 73

I agree with Richard's suggestion, but since you are apparently trying to
run QRP, you might also want to try using the ALC input on pin 4 of the

AUX socket. Note that the Atlas uses a POSITIVE-going ALC voltage which is opposite from most rigs. You would probably want to source the ALC voltage from a different (small) battery.

2504. Re: Two-tone FM deviation test? HELP!

Source record: 211942

From the ARRL publication: "FM and Repeaters", (1978), Chapter 11:

Measurement of Deviation Using Bessel Functions

"Using a math relationship known as the Bessel function, it is possible to predict the points at which, with certain audio input frequencies, and predetermined deviation settings, the carrier output of a FM transmitter will disappear. So, by monitoring the carrier frequency with a receiver, you can identify by ear the deviation at which the carrier is nulled. A heterodyne signal at either the input or receiver I-F is required for the carrier to produce an easily identified beat note. When making the test you have to concentrate because other tones are produced in the modulation process. With an audio tone selected from the chart, advance the deviation control slowly until the first null is heard. If you want a higher order number, continue advancing the control further until the second, and then the third, null is heard. Using a carrier null beyond the third is generally not practical.

For an example, if a 905.8-Hz tone is used, the transmitter will be set for 5-kHz deviation when the second null is reached.

---DEVIATION ACHIEVED IN KHZ---
Audio Freq. 1st Null 2nd Null 3rd Null
905.8 2.18 5.00 7.84
1000.0 2.40 5.52 8.65
1500.0 3.61 8.28 12.98
1811.0 4.35 10.00 15.67
2000.0 4.81 11.04 17.31
2079.2 5.00 11.48 17.99
2805.0 6.75 15.48 24.27 <end quote>

I haven't tried this (I use a 40-year old deviation meter), and I don't have the original source. This was transcribed from a different forum. Take it for what it's worth.

I'm glad I'm not the only one who thinks it's crap. Try keeping the
4.5 MHz sound sub-carrier on frequency. Yeah, right.

I'm now using comercial CATV gear. Nice difference, but still too
much interference on UHF (packet and radar mostly). The BEST signals
around are the guys transmitting/recieving FM video in the 1.2 and 2.4
GHz bands. Wow, what a picture! I'll be there soon too. --Mike

Does anyone have ideas about the selection of a base station all mode xcvr for two meters? I think a unit that is one or two generations back would be a good choice. I want to be able to work on and/or modify the xcvr. It should have FM, CW, and SSB modes. Switchable filters would be good for SSB data as well as voice. If you have had good experience with a particular unit, let me know.

2509. PRODUCT REVIEW: TIMEWAVE TECHNOLOGY DSP-9+ AUDIO FILTER

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-29 00:00:00 UTC

REVIEW: TIMEWAVE TECHNOLOGY AUDIO DIGITAL SIGNAL PROCESSING FILTER DSP-9+

There's been a lot of folks cussin' and discussin' the latest technology to improve reception of amateur radio CW, SSB and data reception. Since my main ham radio interests lie in the area of older and esoteric equipment I have followed this closely. For years I have used a Datong FL-3 audio filter which is essentially a capacitive device. I was satisfied with its peformance especially when it eliminated heterodynes and whistles.

Howver, advances in technology have produced a new crop of audio signal processors that utilize digital techniques and they go beyond the basic audio filters of the past. The TIMEWAVE TECHNOLOGY DSP-9+ I recently played with showed me that very quickly.

Here's essentially what it does: The DSP-9+ examines a characteristic of noise called correlation, the degree of which is relative and filters out signals and noise that are outside its parameters without little degradation of the wanted audio. In addition, the DSP-9+ has bandpass filters which can improve a signal with a poor signal-to-noise ratio. An internal jumper selects the filter set, either 1.6, 2.0 and 2.4 or 1.8, 2.4 and 3.1 KHz for fone. CW fans will find 18 different CW filters. For Collins Radio fans (like me!) the DSP-9+ offers a choice of a special filter set just for us selected by changing a jumper.

Finally, for the digital modes, the DSP-9+ offers four data bandpass filters for the five popular data modes - RTTY, AMTOR, PACTOR, G-TOR and Kantronics' G-TOR. Center frequency for the data filters can also be selected by jumper to accomodate the different mark-space frequencies used. RTTY enthusiasts will appreciate the RTTY remodulator circuit which demodulates the incoming noisy signal, digtially recovers the data and drives an internal AFSK generator, feeding a precise signal to any multimode controller or terminal unit.

In addition to the above features, the TIMEWAVE DSP-9+ has a switch selectable output automatic gain control and a self-test mode to check proper opertion and installation of the DSP-9+. Installation is very easy - provide 12-16VDC @ 1A, receiver audio input, PTT input and audio output providing 2.5 Watts into a 4 Ohm or 1.6 Watts to an 8 Ohm loudspeaker. Headphones can, of course be used and there's an additional audio output jack to a 600 Ohm load. The DSP-9+ is housed in a high-quality extruded aluminum case - not a cheap folded metal case like the others I've seen.

Instead of going into the details of operation, suffice it to say that some time spent with the unit and the manual will be well spent. The controls consist of one knob and seven push-button switches on the front

panel that adjust the audio output level, operating mode and operational parameters of the unit. Of course, the DSP-9+ can b totally bypassed when not in use.

I tried the TIMEWAVE DSP-9+ on two receivers: Collins 75S-3C and National HRO-5 and two transcievers (Collins KWM-2A and ICOM IC-735). The fact that this current technology can be applied to these vennerable classic radios without modification is particular appealing to me. The 75S-3C has 2.1 and 500 Hz Collins mechanical filters (the best in their time!) with extremely sharp skirts. Unfortunately I was never able to pick up the 200 Hz Collins crystal filter which I would have liked to have for this test. Using the DSP-9+ showed me that I can stop looking. The DSP-9+ skirts are very sharp and can be closed down to 100 Hz and still produce a copyable CW signal that cannot be heard at wider bandwidths. It is impressive! The KWM-2A is a later production of the first SSB transciever designed in the mid 1050s and, although you can send CW with it, has only one bandpass of 2.1 KHz as determined by the mechanical filter. The two things I found lacking in the KWM-2/2A transcievers is selectivity and receiver offset tuning or RIT. The TIMEWAVE DSP-9+ takes care of the former. The latter can be a reality thanks to a RIT mod kit offered by John Webb, W1ETC.

I loaned the TIMEWAVE DSP-9+ to a friend of mine who is really into RTTY monitoring and he reported that he was very impressed with its performance using it with his M-8000 terminal unit. He said he was able to copy some very weak and noisy signals thanks to the RTTY remodulator.

All in all I was very impressed by the TIMEWAVE TECHNOLOGY DSP-9+. I like the fact that it is totally external to the equipment and can be used on many different radios without any modification to them. Collectors of vintage comminucations equipment will appreciate this greatly. The DSP-9+ makes these wonderful old "boatanchors" fully usable in today's crowded amateur bands, especially on CW. The DSP-9+ is a nice piece work and, made in the U.S.A.

> appreciated. Please email with info.....Tnx....Bill in Las Vegas....

Bill:

I was curious, so I called both Yaesu tech support and RT Systems (the makers of the programming software).

Yaesu said it wasn't a "recommended mod", but that the software freq change using the programmer shouldn't hurt the radio.

When I called RT Systems, the gentleman I spoke with said the radio was only capable of receiving from 100-180 and 375-525 MHZ. Anything out of those freqs would not be heard at all...

Does this help you any?

The actual mod:

Go to win.ini and look for a section that contains ALLOWANYFREQUENCY = 0. Change the 0 to a 1. RESTART WINDOWS. You can then program in just about any frequency FROM YOUR PC...THIS DOESN'T CHANGE THE KEYPAD ENTRY, but only freqs in the range above will be heard.

2511. CHEAP RADIO NEEDED... READ THIS PLEASE!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-29 00:00:00 UTC
From: n9mxt1@aol.com
Message-ID: <44govb$qtk@newsbf02.news.aol.com>
Source record: 211854

Hello,
Does anyone have any CHEAP I mean CHEAP VHF or UHF radios? I don't care what it looks like personally...just that it's KEYBOARD entry or even if it's eprom or crystal as long as you program it for me before I buy it.... HT or Mobile... Whatever is cheaper for you!

If it's UHF and has at least 4 Channels I need it on Freqs:
444.4400 MHz Simplex
462.6750 MHz GMRS OUTPUT For
Repeater
467.6750 MHz GMRS INPUT For
Repeater
462.6000 MHz GMRS Simplex
Or if this radio is only a 2 channel then
444.4400 Simplex
462.6000 Simplex
If it has more then 4 channels leave all the others blank

If it's VHF and has at least 4 channels I need it on Freqs:
144.4400 MHz Simplex
154.7700 MHz EMA

146.7600 MHz Ham Radio
Repeater OUTPUT
146.1600 MHz Ham Radio
Repeater INPUT

Or if this radio is only 2 channels then
144.4400 MHz Simplex
146.7600 MHz Ham Radio Repeater
OUTPUT
if the rado has more then 4 channels leave the others blank

Also, I need DTMF if possiable... if not that's ok too!

Thanks and hope to hear some replys soon... N9MXT1 - Jeffrey

I am perfectly happy with my Kent paddle... heavy enough I can't slide it
around the sesk top when I get excited over a new country QSO... yet a
very light touch and practically zero contact gap....
And the cost for the kit is much lower than for the Jones... maybe not as
pretty, but it does the job

On a related topic, does anyone know of any documentation on the actual protocol used between the radio and the computer? Since I use a Mac, the software that Yaesu sells is useless to me. Looking at what it does, I think I could cobble together a usable Mac version without too much trouble if I had the spec.

> (you need to buy software and cable), wider freq range (430-470)

i just called icom and asked some more questions about the f40-LT
(a version of the f40 that has a keypad) and it's looking better.

they claim it's mil spec 810CDE, even though the brochure
didn't say so. that says something about its durability.

also, dealers can set it up for hand-programming.

it's the only radio i know of that's targeted at the 450-470 commercial
band but can also receive and transmit in the 430-450 Mhz ham band.

does anyone out there have or know anything about the icom f40-LT
or the vertex vx500?

: around are the guys transmitting/recieving FM video in the 1.2 and 2.4
: GHz bands. Wow, what a picture! I'll be there soon too. --Mike

Interesting... Perhaps I should have said what I wanted to do with the
equipment and asked for a more general recommendation.

The local club here (W6CX) has an ATV repeater with an input on 1.2
GHz and output on 70 cm. I'm not sure if the repeater input is FM or
AM, but I suspect it's FM. I don't have any equipment for either of
these free frequencies, so I need both an ATV receiver (70 cm) and a
transmitter (1.2GHz).

What should I get? PC Elctronics, some other amateur gear, or should I
get commercial? What is the relative cost of commercial vs. amateur
gear?

Source record: 211862

I'm looking the way
-to setup new channels,
-to modify current channels
-or to remove some old channels
My Rx/Tx an ICOM H16T has been tuned by vendor and
my manual DOES NOT explain how to proceed with frequency tunning.
Each time I need some new frequencies, I have to send back my Rx/Tx
to the vendor and to wait one or two weeks for get it back to me.

PS: I don't use this Rx/Tx for myself, but for a charitable
association which provides all legal permits needed for frequency
use, and which also often changes, adds or removes some frequencies.

Please answer by mail to supermag@dialup.francenet.fr ,
(and don't expect too quick answer)
Thanks.

Ten-Tec makes a 12V 9 (?) amp switcher. I believe the 706 can have it's
output power set from 5 to 100 watts in 5 watt steps or something like
that. Anyway, my plan is to use the ten-tec switcher and the 706 at
a reduced power setting.

Here is a thought.

I have been refurbishing and selling a 16 channel 32 watt, user programable radio.
made by fujitsu, it is a high quality type accepted radio. it will work perfectly in the GMRS service, in fact it was made for this type of service. A user can program the radio. no dealer required.

i have been selling them complete for 200.00 including shipping.

Hello Jerry, I use the PC Electronics TCV-10 10 watt transceiver and it works great. The 25 member Lompoc,CA. ATV group uses PC Electronic's equipment with the exception of one member who wanted to build his own. This member built a transmitter and downconverter from North Country Radio.

We now have 13 transmitting stations and the remaining tune us in with their downconverters.

I had a similar requirement a year or two back and solved it by obtaining an old discarded Phelps Dodge Stationmaster. I removed the elements buy cutting off the corona cap and sliding the elements out of the fiberglass raydome (from the bottom) using a couple of allen wrenches. Then slid the Diamond inside the empty, but very rigid Stationmaster shell. This antenna will be around long after I'm gone. Best of luck.

Hi,

I was wondering if anyone knew which lapel microphone & PTT switch will work with the Radio Shack HTX-202 2 meter? I understand the Yaesu works, and the Standard might work on low gain. Does anyone know if the Icom, Kenwood or Alinco will work?

Thanks for the advice and feel free to email me directly if you wish.

I recently purchased the software program for cloning and programming the FT-51R handhelds. About a month ago i saw a message here on this newsgroup talking about changing one number in one of the files associated with this software to extend the receive freqs to cover 100 mz to over 700 mz. I saw two postings about this mod and evidently it was implemented successfully. Any information on this would be greatly appreciated. Please email with info.....Tnx....Bill in Las Vegas....

Yow, I read several "sour grapes" posts claiming the Kenwood 870 was not a real improvement. I went and tried one next to a Kenwood 850. The guy is right! The DSP is not really very magic at all. It is OK, for sure. But it is no improvement over the 850 with a Timewave attached at all. In fact, I liked the 850 better since it had the multiple IF filters I could switch in, the 870 depends entirely on its high cut / low cut (slope tune on the 930, et. al.) to narrow the passband.

Just an observation at HRO today.

>right direction? Thanks!

My first advice is to be very very careful. Amps in this range are easily lethal if you make the slightest mistake. That said, many amateurs build linears, and are still alive to tell the tale. If this is your first high power project, and I expect it must be if you want more detail than the Handbook provides, you'll do best finding experienced help. Someone local who has done it before can be an invaluable resource. They'll also know where to find the parts you need. Usually, you get those from "them that's got'em", IE other hams at hamfests or through swap nets or the like. Sometimes you're forced to buy new, but brace yourself, new amp parts aren't cheap. Usually you can find a source of surplus that's much cheaper.

If you're puzzled by some detail, there are some really knowledgeable amp builders who hang out in the .homebrew group who'll be glad to answer your questions.

I looked at one of these at a local radio shop. The case is exactly
that same as that of the Radio Shack HTX-202/404 HT. Thus, it will use
the same accessories at the HTX-202/404 and the Icom-2AT series Amateur.
The unit will transmit a 5-6W at 12.8V DC, just like the HTX-202/404. It
has 10 channels: 7 for the splinter frequencies, 2 for the repeater pairs
you're authorized, and one channel for the emergency/traveler's aid
repeater frequency pair. The two frequencies you're licensed for can be
programed by the end user. The unit I looked at had the instructions for
doing so right in the box.

Looks like a good unit for the money.

From: turner@safety.ICS.UCI.EDU
Message-ID: <29808.812340657@safety.ics.uci.edu>
Source record: 211951

Anyone out there have any experience with the Drake L-4B
on 120 VAC? I have no 220 service here and was going to
adopt the L-4 for a while, using it for occasional 40
meter nets. I don't need 1500 watts output, am very happy
when QRM gets bad to run 500 or 600 watts out. Now,
is the pair of 3-500Z's capable of running that way without
damage to them?

So, my question in a nutshell - Can I run the L-4B on 120 VAC
20 amp service in a reasonable fashion?

On 28 Sep 1995 23:26:56 GMT fiscon (fiscon@ix.netcom.com) wrote in rec.radio.amateur.equipment:

: I have a 13.2 volt 4 amp/hr, 11 cell battery that I want to charge. If
: you can please answer the following questions. I have charged it at
: 400 milliamps or %10 of the rated capacity for 20 hours at 16 volts or
: 1.5 volts per cell. At the end of the charge cycle the battery was
: still showing that it was drawing 400 ma. I have been told that the
: battery should draw less current as it becomes fully charged.This did
: not happen though. The charging rate stayed pretty much the same
: throughout the charge. Am I doing this correctly?

A while ago I built a similar pack when Radio Shack had 4 Amp-hr nicad D cells on sale. I only used 10 cells; I was concerned with having 12 volts available through most of the discharge period, but I didn't want the voltage while charging to get too close to 16 volts, which is the normal voltage rating of capacitors used in portable equipment. I figured to get 1.4 volts/cell at full charge with the charger off, and somewhat higher near the end of the charge period while the charger was connected.

Many chargers are designed to maintain a constant current of 0.1 times the 1 hour rate. Supposedly you need to charge at this rate for 14 hours to fully replace the charge of a fully discharged battery. Such a charger will have a fairly high open circuit voltage, although the voltage measured while charging will vary throughout the charging period. 1.5 volts per cell at the end of the charging period seems reasonable. My understanding is that not much heat is generated during the early part of the cycle, and that for ordinary (not fast charge) batteries the 0.1 charge rate results in a safe amount of heat generation when the battery is fully charged -- i.e., you can safely leave the battery charging at that rate for an extended period beyond 14 hours. In addition to heat, gases are generated at the end of the cycle, and at the 0.1 rate they supposedly can be reabsorbed and thus not damage the seals of the battery.

: ...What is a safe
: trickle charge that I could leave the battery on charge indefinately?

As I said, I the 0.1 rate is safe for extended periods, but I don't think it's a good idea to leave it charging at that rate indefinitely.

Here's a quote from Horowitz and Hill (The Art of Electronics, p. 926):

"Although it's OK to overcharge nicad batteries indefinitley at C/10, it's better to switch over to a trickle charge, typically at C/30 to

C/50. However, nicads are funny, with a memory effect, so that a
trickle rate may fail to revive a fully discharged battery; a minimum
of C/20 is recommended."

: Am I using the right charging voltage? If I try charging at 13.2 volts
: or 1.2 per cell it draws no current.Any hints or suggestions will be
: appreciated.

You really should use a constant current charger. You need at least
1.4 volts per cell, with a typical constant current regulator circuit
(you can make one with an LM317 regulator and a resistor that will
drop 1.2 volts at the desired current) you need that plus about 4
volts or more for the drop across the regulator circuit.

You guys must be using the RS so-called NR unit. It is nothing but a notcher and audio bandpass filter. The NR is their own terminology that does not cross to the common usage in amateur radio. I've used the Timewave and the NIR series and can say that they definitely help dig the weak ones out of the noise. I will agree, though, that some of them do put out the constant hiss. It seems rather ridiculous, with today's technology, that we are back to listening to hiss in the speaker/headphone.

Just another 2 center.

Geeze, ya know, I'm glad somebody else said it. I borrowed a DSP box, and well, it worked, but It certainly didn't perform any miricles. The one feature that did work pretty good was the automatic notch filter. I find I use it only when absolutely necessary. The one thing that annoys the crap out of me it the damned audio hiss the silly thing produces all the time. If it were mine, I would rip out the LM380 which I believe is the source of the noise and hiss, and replace it with something else, even a pair or transistors driven by a NE5534 or other low noise op amp. Sounds like a cheap cassette recorder running 10 year old rat shack tape.

As far as the notch filter goes, while it does work, there really should be some agc to maintain a constant output level at the speaker or headphones. The IF notch filter in my old Drake R4B stands heads and shoulders above the DSP version, even if it is manually operated. But, it's inside the agc loop. The manual audio notch on my Kenwood TS440/s is as about as useful on brakes on a broom too.

I can't understand why somebody would go to all the trouble of designing what could be a good DSP, and hang a cheap 29 cent, piss poor, audio PA on the output. I know, because we'll buy it. That's why.

Deviation is the same on both ham and GMRS. In fact, some GMRS radios are ham radios with different faceplates, jumper settings, and that all-important Type Certification, which adds a couple of hundred bux to the price.

Small radios may be wonderful in theory, but they're a pain to program all the features when you need to. The tiny, non-human sized rubber (or worse, plastic) buttons necessitate a pencil for the task.

That's one of the things I like about my Icom 2GAT. It's 'human-sized', 7 watt output, rugged as all get out and not going to get lost in my pocket. My only complaint on the radio is the keypad is useless; -all- you can do is dial phones on an autopatch. No punching in freqs, dialing up memories, etc. That's doen by rocker switches on top, a poor way of doing business. So, if you don't use autopatches much or at all, get the IC-2GA. (T=the useless keypad)

If you use the software mod, or for that matter, the hardware mods, any previous profiles that you have stored will not work. Each time a mod is performed, it changes the profile and that profile will only work with the radio in the condition it was in when the profile was created. Hope this saves you some programming grief. 73's

2550. substitute 12bv7 for 12by

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-30 00:00:00 UTC
From: EUGENE.WELCOME@rook.wa.com
Message-ID: <F46AB3CB@rook.wa.com>
Source record: 211882
Body handling: HTML body converted to readable text

> is it appropriate to substitute a 12bv7 tube for a 12by7a.

hi bob,
you can use that subtitute of a 12bv7 for a 12by7. they are very close spec wise. my 1973 rca tube manual shows 12by7a/12bv7a/12dq7 as identical. my 1964 sylvania manual shows suttle differences with the 12by7 rated at 7.1 watts plate dissipation and the other two rated at 6.87 watts plate dissipation for the 12bv7 and 6.5 watts plate dissipation for the 12dq7. filament characteristics are identical.

here is the list of tubes using the 9bf base connections from a tube base identifier i keep on my hd. i've posted it a couple of times on fidonet and could here also if it doesn't use up too much space. about 51k bytes. using it with a tube manual it makes a good substitution reference.

```
==================================
# base * tube type page 5b *
#------*------------------------------*
# 9bf * 11hm7,12bv7,12by7,12dq7,12gn7,*
# * 12hg7,12hl7,6870,7733,8448 *
#------*------------------------------*
```

the 12gn7,12hg7 and 12hl7 are the later generation of frame grid tubes that evolved by the mid 60's. the 12hg7 has a filament that draws less current. 12.6v at 0.26a and 6.3v at 0.52a with 10 watts plate dissipation and 32,000 umhos transconductance. the 12hl7 has identical filament chracteristics to the 12by7 but also has 10 watts plate dissipation and twice the transconductance of the 12by7 at 11,000 umhos versus 21,000 umhos for the 12hl7. this means more plate current change with less grid voltage change as the frame grid construction helped in controlling excess space charge by focusing the electron flow from the cathode through the special designed grid. older designs had the electron flow fanning out and in effect wasting electrons that did not get through to the plate. 8448 is a mobile design. 13.5/6.75 filaments at 0.520/0.260 amps. the 12by7 style tube is an excellent rf and high level mixer tube and i have used them with success for my 2 meter ssb designs in the 60's.

type: fil e and i: pw: pe: pr: umho:

12by7 12.6/6.3 at 0.3/0.6amp 6.5 250 93k 11k

type: fil e&i: pw: pe: pr: umho: compared to 12by7

11hm7 e greater than: k = 1000.

2551. Re: Drake L-4B on 120 VAC?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-09-30 00:00:00 UTC
From: sobig neher <sobign@pacifier.com>
Message-ID: <44iet8$rmu@news.pacifier.com>
Source record: 211883

You can operate the L4B Linear on 120VAC but the branch circuit must be designed for 30amps and you should run #10AWG wire. What ever you do, make sure the L4B is operated on its own SEPERATE circuit

: Geoff,

: Seems you have not understood the basic concept of amateur radio.
: Amateur radio is by definition experimental, with the effect that
: you are entitled to built and operate transmitting equipement.

: (In some countries having built a TRX is a requirement)

In Canada you must have the advanced qualification before you can build/
operate home brew transmitters (without the advanced qualification you
can build/operate everything EXCEPT home brew transmitters). That aside,
the resposibility as to where you transmit is in the hands of the amateur
in question...

: As a result, the transmitting range of amateur radios is not
: subject to regulations (In fact *all* commercial HF TRX are capable
: of out of band transmissions)

Yes, the rules over which bands are available to amateurs has changed
over the decades, and what is/is not legal today may be very different a
decade from now.

: The point is that responsibility not to actually transmit out
: of band rests totally with the licensee.

True.

I am looking for someone who has the 10 Courtesy Tone parameters from the ACC RC-85 Repeater controller.

I know I saw them in a old issue of ACC Notes that came from ACC. Since ACC is no longer in business I cannot call them.

If you have the different tone frequencies and segment delays that comprise each Courtesy Tone please e-mail them to me.

Thanks in advance,

Suresh N9GSA

From: aswNS@hamp.hampshire.edu
Message-ID: <91e7cb$a1426.e1@news.hampshire.edu>
Source record: 211890

I purchased a small 440 Mhz solid state amplifier at a hamfest, I understand it is an amplifier module removed from some kind of surplus commercial equipment. Inside a very solid 2-1/2" x 3" x 1" metal box with 2 BNC connectors there are a few diodes and capacitors mounted on a small circuit board marked "3502 UHF AMP". Adjacent to this is a solid state module with 7 leads, heatsinked to the bottom of the box. It is marked

TRW
MX12-3
440-470MHZ
7244

I am wary of experimenting with this unit until I have some idea of permissible maximum supply voltage and drive levels. I would appreciate any information anybody might be able to provide on the specifications of the solid state module or that would help me identify the source of this unit. I would also appreciate any references to magazine articles or books that treat in a general way working with such solid state UHF modules.

Thanks and 73, Al N1AW

2571. ALINCO DX-70 MODS --> READ HERE

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-01 00:00:00 UTC
From: "J. Fitter" <joentam@transend.com.tw>
Message-ID: <44kv21$ls9@keelung.transend.com.tw>
Source record: 211809

Ok, first an apology to all who sent msgs about these mods. Sorry for the delay in getting these out here.

The Alinco DX-70 can be configured as follows:
Extended TX, open the RX up to 35Mhz and down to 30 Khz, Open the VHF side from 45-60 Mhz RX/TX. All can be done quickly by , by removing or changing a series of chip-resistors located in the detatchable front face panel. This mod is a little tricky to perform, since it uses surface mount devices, so I TAKE NO RESPONSIBILITY IF YOU BREAK YOUR RIG. Alinco, further, in their mod sheet, warns that performing this mod incorrectly will NOT BE COVERED via warranty. At first, I tried using a Salami sized soldering iron--- take my word, get a good, very fine point iron of about 15 or 20 watts max! Make sure it is static guarded too.

Ok...Here we go.

1. disconnect power
2. disconnect antenna
3. remove control head, disconnect control cable
4. remove 4 screws on back of control head,
5 remove (unsnap is more like it) the control head back panel.
6. THE MOD:

Once you have the back panel removed, and using the big VFO knob as your guide (circuit board facing you, LCD display not facing you). The VFO knob should be on the left side. On the right side, in the lower right hand corner, you should see 2 distinct columns of chip resistors. On the board, they are NOT labeled, but I will draw the diagram below to help you. You cant miss these because there are 5 chip resistors in the left-hand row, and the right-hand row has 7 chip resistors. Above both rows is a solder-pad.

```
a(::) h(::)
g-
i-
b - j-
c - k-
d - l-
e - m-
f - n-
```

Several chip resistors will be soldered in, depending on the model of your rig, and a solder pad is jumpered. Here are the mods per Alinco:

a. 45-60 Mhz TX/RX - solder a 0ohm or jumper across location i
b HF RX down to 30 Khz - remove the jumper m
c. beyond just Mars Mod - TX/RX everywhere remove both jumpers c and e
d. HF RX up to 35 MHZ - solder a bridge across pad a

After performing the above mods, reassemble the unit.

7. DONT FORGET to reset the microprocessor (with the radio off, hold
the F button and simultaneously turn the power on.
All memories are wiped out, but the new bands are opened.

I've tried all mods with my Alinco rig and can confirm they work. I am
able to pick up business band communication in the 46 Mhz range (FM), and
cordless phones in 46/49 range. It TX's everywhere now too.

I do not take responsibility if you perform this mod incorrectly, and I
am not responsible for your operation practice if you choose to illegally
transmit out of band.

Thanks and again, sorry for such a delay in getting this out here.

From: willhelm@ix.netcom.com
Message-ID: <44mgmj$l8l@ixnews5.ix.netcom.com>
Source record: 211813

I am interested in the possible purchase of the AEA DSP-2232 controller. However i have a few questions concerning its advantages over the PK-900 Tnc. The only advantage i can see at this point is the DSP signal acquisition scheme (and its possible superiority) over the analog bandpass filters in the 900. I assume for the average guy who is not interested in sat work that the 900 is the proper choice. But with todays bands becoming more and more crowded the DSP can become a benefit i am sure. I heard some scuttlebutt a year or so back that owners of the 2232's were upset with AEA because they had not come forward with their original plans to implement SSTV//and several other promised modes for the 2232. I guess maybe AEA kind of dropped their R&D towards this controller because it had not become a hot seller for them. With the price they ask for this machine i can see why it did not really catch on well. Anyway, if you can shed any light on this i would really appreciate it. Thanks in advance......Bill in Las Vegas, Nv.

Nope, it's the W9GR unit I believe. Surely was not the Rat Shack unit. I
have since returned it to the owner, so I am not exactly sure which one it
was. I am positive it was not the Rat Shack unit, like I said.

I don't know if others have had the good service out of Radio Shack, but
here's a little gem..

My father uses HTX-202, and it dropped it off the hood of his truck
(while parked). The tuning knob was damaged, spun freely, no detents.

He took it in, showed it to the clerk/salesperson , and got handed a brand new
one. No repair, no wait, no BS. Whole thing took about three minutes.
Then he purchased the extended warranty, on the new one.

Needless to say, he is a fan of the Shack's service now.

I've also seen first hand that when a customer brings in a radio with an
intermittent TX problem, they will also swap the radio with one off the
shelf. BUT... they put the other one in its place.

How to use this Chart for Tube Substitution
Tube substitution is difficult without special books on it. In
the early 60's Sylvania published a Tube Manual with a back section
devoted to basing diagram references. This base reference gives a
quick way to find which tube used the same pin connections. You have
a tube type 6U8A in a receiver osc/mixer and you do not have a
replacement in your collection of goodies. Find a Tube Listings in a
50's, 60's, 70's or early 80's ARRL Handbook (The mid 60's and 70's
are the most complete) and look up 6U8 * (note below). It will show a
base type 9AE. Look at the chart I posted and look up 9AE and the
following tube types are listed. First you mentally weed-out all the
tube types not beginning with a 6 except for the industrial types.
Then write down 6AX8, 6EA8/6GH8, 6GJ8, 6HL8, 6LM8, 6MQ8, 6U8A/6KD8,
GB1252/6U8A, 6678/6U8A, 7059, 7643, 7687, 7731 and 8445. Look for one
or more of these in your goodies box. All the tubes will fit the tube
socket and most likely plug in 'BUT' you have to go farther. You may
have found a 6EA8/6GH8 tube in your goodies box and you hope it is
similar. Look it up in the tube manual, the 6EA8 or 6GH8, they were
once separate tube types that were so close in design they later
```

incorporated both numbers. The figure "/" between tube numbers indicates same types. The 6EA8 has the same Filament characteristics as the 6U8A, but the Plate Watts dissipation is a tad greater. It's OK to be a little higher as you do not know if your circuit was designed close to the limits. The 6EA8 = 3 Watts and 2.5 Watts for the 6U8A. The max Plate Voltage is slightly better, 150 versus 125v. Conditions set for Wattage applies here also. Plate resistance in Ohms is identical as there is some latitude here. Transconductance is a little more and the Amplification factor is the same. This tube will work well and probably will give better performance but since the triode section is the oscillator for the pentode section which is used as a mixer of this communications receiver, you may have to recalibrate the oscillator frequency. The 6U8C would have been the ultimate but its design is old and the 6EA8 was a newer generation design with different metals and cathode structure as well as grid structure that resulted in an improved operating tube over the 6U8. The 6U8 often developed inter-electrode shorts and was noisier. The 7731 happens to be the same as a 6U8A. The 8445 would not be a good choice. Lower wattage and plate voltage ratings. More than likely it would over heat and self destruct. Possibly damaging the radio.
Now if you are looking for more power such as in old tube type amplifiers say the famous Williamson Amp. There were variations with the final power tubes being 6L6GB/GC or 5881 or KT-66. You have a pair of KT-88 and you find out they all share a base type 7S/7AC. Forget it, you will gain nothing by installing the KT-88 and quite possibly get poorer results. The KT-88 has much higher plate voltage requirements as well as higher plate current all of which is not available in the smaller amp. The output transformer is matched to the smaller tubes and would not handle the increased current of the KT-88's. Also the bias voltage for class AB1 is totally different and distortion would probably result. I've tried it. It was a waste of my money. Tube substitution for RF use as in a Frequency Multiplier chain or Driver or even Output RF Amps, caution should be exercised. Substitute with tubes that closely match. Don't sub for increased power but you can substitute for improved performance. As the Tube, as "King" in the industry came to a close the engineers were designing quieter tubes for RF receiving use.
* Note: a 6U8/6U8A/6U8B or even C. A or B or C is nothing more than evolutionary changes of the late 50's vintage 6U8 underwent over the years as a 6U8A is better than a 6U8 and so forth. It may have enough difference that the tube may not work in a critical oscillator circuit or be way off frequency. Try the substitution ** note below, as nothing ventured nothing gained. Or smoked. :(
** Note: When substituting Tubes The Filament Voltage and the current should closely match the original in parallel wired circuits. Using a higher current fil. may over heat the filament supply. For Series String Tubes, fil. current has to match with each tube. The total series fil. Voltage should be equal to the filament supply voltage. Although a lesser current filament can operate with a higher filament current tube if a resistor is paralleled with the lesser to

equal the total current drawn by the greater.

My apologies for not creating this document to fit a standard
sized paper. I started out with 70 lines per page and messed up on
the 5th and 6th page but some adjusting on a word processor should
help in printing. There are still some Electronic Buffs (new and old)
out there that will get some use out of this. Enjoy.

Bill -

The commercial Motorola PAC-RT and PAC-PL "Vehicular" repeaters operate on a cross band principle. Midland also offers a vehicluar repeater and a company called Pyramid now offers an add on vehicular repeater.

If your mobile radio operates on VHF, you would use a UHF portable to communicate with a UHF PAC repeater that in turn keys your mobile radio and rebroadcasts the transmissions from your portable. Likewise when the receiver on your VHF mobile unit is active, it rebroadcasts thru the PAC repeater to the UHF portable.

The general principle is very similar to the crossband repeat offered on most dual band mobiles; however the Motorola units are designed so that if there are multiple PAC repeaters at a given location, only one will key up.

Hope this has helped.

I'm not criticizing your reply to the original post. It was accurate and just what he wanted.

I just have one question. Why is it we have let the new terminology creep into this sort of operation? This is/was referred to as a remote base, not a repeater. There is no repeater involved here. Let's get back to the earlier terminology.

Another 2 cents worth.

2590. Re: HTX-202...Good? Bad? Ugly?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-01 00:00:00 UTC
From: scicon@ix.netcom.com
Message-ID: <44n7u5$j2f@ixnews6.ix.netcom.com>
Source record: 211828

Why do some say the HTX-202 is no good for packet?

I use mine on packet using Baycom, and it seems to work OK, but I've never used anything else on packet. Sometimes I can't connect to stations when I can hear their signal very clearly. Is that the problem people are talking about?

I don't use packet very much because I can't always cannect to my club's BBS, but I always thought that was because of the traffic.

Can someone explain the problem with the HTX-202 on packet?

Date: 1995-10-01 00:00:00 UTC
From: morris@grian.cps.altadena.ca.us
Message-ID: <1995Oct1.072520.2380@grian.cps.altadena.ca.us>
Source record: 211836

I'm having trouble getting clean waveforms when wiring a Com-Spec TE-64 to the "tone" jack of the older Midland synthesized ham rig.

I suspect the "tone" jack injects at a point in the L.O. that was designed for touchtone, not PL.

If someone has done the R&D to find the proper point in the LO/synthesizer, please email or post - it'll save reinventing the wheel.

>
> Thanks...de..Don.
>

You won't get too far with the power that comes out of a TTL oscillator
not to mention that the signal is a square wave.
You might want to filter and buffer the output to produce more of a sine
wave at a little higher power.

Regards...

Hello Doug,
I have an RBI-1 and have couple of problems with it also. There are a few things that I would like you to check. Do you have the controller set-up to support the FC-1 (BCD) format and the dip switches 4 ON 5,6,7 OFF. Is the COR input to the RC-96 set-up for active high? If not it should be. One thing I found out is that the RBI-1 wants to see absolute ground on the PTT input and many controllers only drop down to about .7 volts enough for a radio, but not enough for the RBI-1. A solution to this is to use the PTT output from the controller to drive a small relay and set the contacts of the relay up so the common contact is grounded and the normally open contact goes to the PTT input on the RBI-1. This way when the controller sends out the PTT this will energize the relay an send absolute ground to the RBI-1. Hopefully this solution willbe of help in fixing the PTT problem. As for the COR let me know the answers to the questions above.
Good Luck!

I have a wide variety of tubes, actually I have a few hundred. My
grandfather (W8YFS) died a few years ago and he left me his radio gear.
The tubes are not anything I really need and I would like to find someone
who would like to buy them from me.
There are tubes and boxes that are EXTREMELY old and many that are only
a few years old ones as well. If you have any serious curiousity in
purchasing these in bulk please e-mail me with what you are looking for.

Thanks.

>terminology.

Oh, boy, is this a can of worms! The operation described above falls under the definition of "repeater" in Part 97. Part 97 doesn't use the term "remote base".

Of course these crossband repeaters don't act much like traditional in-band repeaters. Having two input frequencies and two output frequencies, they behave in a manner that is described coloquially as a "remote base". But that's not defined in Part 97.

In left coast amateur parlance, "remote base" has come to be a term describing part of a remotely controlled transmitting system, and remote control operation is defined in Part 97. The above referenced operation doesn't meet that definition because *all* transmissions of the "remote base" aren't under direct operator control. Instead, they occur under automatic control (either via carrier squelch, tone squelch, or some form of digital squelch from inputs on the VHF side as well as from operator control signals on the UHF side), which repeaters are allowed to do, but remotely controlled amateur stations are not.

If the operator on the control link were putting the station in "listen" mode and "transmit" mode manually over the control link, then we'd have a proper remotely controlled station. But by allowing the signals of others on the VHF side cause the relay station to transmit, it becomes a repeater and not just a remotely controlled station.

I built one of the early W9GR units for my father-in-law, and gave it an (extensive) run-in before delivering it. I thought it worked quite well. (He has a problem with line noise, and is VERY happy with it.) I then built one of the later versions for myself. IMHO the audio quality on the earlier design was much better than that of the current design.

2613. Mods for Kenwoods 741,742

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-02 00:00:00 UTC
From: "Thomas C. J. Sefranek" <wa1rhp@wa1rhp.iii.net>
Message-ID: <44pk2l$58@news.iii.net>
Source record: 211763

I have had the misfortune of owning a 741 with a 6 meter module,
(as well as the usual 2 meter and 440Mhz...)
in which both the 2 and 6 meter transmitters failed.

After months of moaning and complaining, nothing getting fixed that way,
I needed to take a trip out of state. No way was I going to travel
without my...radio's.

So, I removed the remote radio. After some time I got the modules
fapart and open. Hah! The 6 meter PA had an obvious power line
disconnect! The pin from the main PC board which carries the 12 VDC
at several amps to the PA transistor just brushes by the PA PC board.
And Kenwood bridges the gap with solder, now that's a good connection!
NOT! I removed the old solder, and added a piece of zip strip, the
copper bus bar with .1" holes for wire wrap baords, over the power
pin. Then I soldered the pin and the bus bar. NOW, it's a good
connection! Take note kenwood! (and owners)

Next the 2 meter module. I found no obvious failures by inspection.
But, Roger (W1OJ) suggested the PA module has had a history of
cracking... So I de-soldered the 4 pins from the module to the PC
board, and popped off the cover of the PA module.
Sure enough! The ceramic substrate of the hybrid was cracked.
I noticed NO heat grease between the module and the heat sink...
Kenwood!!! Bridging the lands on a ceramic sub-strate bonded to a
heat sink is a trial! A "normal" soldering iro gives up it's heat
immediatly to the heatsink thru the ceramic! So drastic measures are
required! I used a "big motha" tip for a few seconds and got it fixed.
However I only get 15 watts in the high power mode, perhaps some of the
paralleled transistors didn't like the crack failure mode. Ah well!
I can live with 15 watts! Someday, when I'm rich, I'll buy a replacement
PA module.

I hope this note helps other Kenwood 741-2 owners, I suggest you fix the
heat grease problem BEFORE the substrate cracks. And if you have the
10 meter or 6 meter modules, check for a "good" connection from the
power pin to the PA board. You can "do" the fix with wire too!

Hi Bill,

>How does a mobile repeater work? When I am in a location away
>from my mobile and I can't reach my base repeater with my HT, How
would
>a mobile repeater work to repeat back to the base repeater. Any help
>appreciated. I have seen GE and Motorola mobile repeaters advertised

It would work the "cheapest" with a dual band mobile/ht. If you have a dual band ht.. 2m 440 then you pay about 600.00 for a dual band mobile.. Compared to WAY OVER 600.00 for a mobile repeater...

First: With the dual, dual radios.. What I have is a Kenwood TH78A and a Kenwood TM742 mobile.. Both have 2m/440 I put the mobile in fixed band repeat.. On the ht.. Put the repeater I want to hit on one side and a simplex frequency in the other.. ie.. repeater on 2m and 440 simplex. On my mobile what I tx on 440 gets re-transmitted out on 2m in the car.. I use fixed band repeat because it is not a FULL CROSSBAND and I have no hangtime or wait for a carrier to drop before I can transmitt.. It is instinateus.. This only works if you can hear the repater with your ht.. It is sort of like a one way extender.. I like retransmitting through 440 because it has the best penetration through buildings.

Second: With a portable mobile repeater you have the advantage of providing a repeater if you go on an event or have allot of hams in one area where other repeaters are not usuable.. You can use the repeater to access other repeaters, but would need a remote base installed.. That costs more $$$$$$.. Depending on the quality and features.. If you go that route an autopatch can probably be setup through a cell phone???????????? ALSO check with your local repeater club, some do not like remote bases comming in on there repeaters.. So dont care some do care..

AEA and their original DSP programmer had a parting of the ways after the satellite modems were completed. (I won't get into that, having only heard the programmer's side of that dispute.) Anyway, that stopped DSP code development for the unit for some time. The rumor mill had it that AEA had engaged the services of another DSP programmer, but as you note, there doesn't seem to have been any further code released for use with these units. At this point it is reasonable to question if there ever will be more code released for this box.

AEA did release some documentation on this unit so that independent programmers could work with it, but I haven't seen any code released as a result of that (Grace's DSP-12 seems to share a similar fate). TAPR seems to finally have their DSP card available for programmers to use, but again code has been slow in coming, and it's priced higher than many available alternatives.

Other DSP solutions intended for amateur use have also appeared, including the HAL P-38 card and the PACTOR II unit from Germany (also to be second sourced by PacComm). These units seem to have committed development teams, and likely have a future.

In the meanwhile, DSP evaluation kits, and sound cards bearing DSP processors, have become available which are much cheaper than any of the above units (most available for under $100), and for which cheap (or free) development tools and documentation have become available. Among these are the TI kits, the Motorola kits, and the

Analog Devices kits. The latter chipset is also used on the inexpensive Cardinal sound card, which also has an available software development toolset. And there is an IBM sound card bearing the TMS320C25 DSP chip as well. The sound cards are particularly attractive because of their tight coupling to the host PC, but most of the evaluation kits are also suitable for use as external modems for ordinary TNCs.

So what's a buyer to do? I'd suggest that if you're happy with the current code available for the AEA or Grace boxes, and if you can stomach the price, you go ahead and buy one of them. However, if you're expecting lots of enhancements down the road, you'd do better looking at the platforms the code developers are embracing.

Becoming a code developer yourself is an option. In particular, the TMS320 family and the ADSP-2100 family are well supported with tools and example code. The Analog Devices unit in particular has an available set of source code cookbooks that implement everything up through a V32 modem on their EZkit development platform. It only took me a couple of days from ground zero to get a functioning FSK modem programmed on the EZkit, and I'm no DSP programming whiz, in fact this was my first attempt at practical DSP programming. Because of that, I'm sure the implementation is far from optimum, for example I still haven't figured out a good way to communicate tuning indicator data to the PC for display, but the darn thing does work, and pretty well too, even with moderately weak signals. Really weak signals, ones I can't detect by ear, will have to wait on my figuring out the tuning indicator problem and shifting to a more robust encoding than naked FSK. One of the cookbooks has a trellis coding demodulator that ought to serve for really weak signal detection.

(Really weak signal performance probably isn't very important to you since most HF signals are at least moderately strong, but it's a current pet enthusiasm of mine.)

Not to overstate the obvious, but the aircraft signals *are* AM
while the DJ-160 receives *FM*. Perhaps the AM detector circuitry
is missing, or perhaps you have to manually enable it with a setup
function. What does the fine manual have to say about it?

Colin,

You are bringing up a real nightmare here, the conversion of amateur radio into a multiband CB. (simple or no examinations for the licence, beefy licensing fees..) Many folks want this, watch those who keep talking about type approved amateur radio gear and dropping code.

>Patrol Radio Operators Permit, they *will* modify your radio for you.

Hello,

I have a friend with CAP and there is a new CAP law that in the future
they can use ONLY comercial radios.. For what reason they did this, I
have no idea.. But have NOT hear wether MARS will do the same.. So if
this law is not tabled, then only MARS personell can have ht's modified
at HRO & AES.. For a nonlicensed HAM that uses the ht out of band for
other than CAP - MARS)Saying this person IS licenses for MARS or CAP)
then his Ham License can be taken away and possible fines or
imprisement.. It is a FELONY for use FCC frequencies illegally.

If the CAP person is not a ham then he/she has no extra cost in buying
a comercial ht.. Have seen a Relm 16ch for about $389.00 just a little
more than a 2m ht.. But if that person IS a ham then another radio may
be in the works??

2635. Re: IC-730; Adding CW-N filter

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-02 00:00:00 UTC
From: jjo@tekla.fi
Message-ID: <JJO.95Oct2133200@ds10.tekla.fi>
Source record: 211849

Adding a IRCI "wire-in" SSB filter to an IC-751 seemed to be rather easy (a friend who knows radios well did the installation for me). I suppose a CW filter for IC-730 should not be much different. The important thing is (so I have been told) to ground the filter well.

2637. Anyone modified FT-757GX?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-02 00:00:00 UTC
From: jukka.virtanen@teleste.fi
Message-ID: <44onda$l6s@linux.teleste.fi>
Source record: 211851

I am using my FT-757GX a lot for AM signal reception in medium waves (500-1700 kHz) but I have found that the performance of the receiver section is quite poor. I have modified the preamplifier to operate under 1500 kHz to add sensitivity. To make receiver more selective I have added an extra AM filter (Murata 2.7 kHz) to the 455 kHz IF section but in both cases the results are not satisfactory.

So has anyone tried to enhance the same features and with what results?

And one more thing. I am using an external keypad to operate the FT�s VFO but in some cases I would like to use also the VFO knob itself. But it is so SLOW! How to speed up the VFO with less revolutions?

The module you are referring to was obviously made by TRW back in 1972.
I'm not sure what the "-3" means after the MX12, but here is the scoop as
I know it.

Absolute maximum ratings:

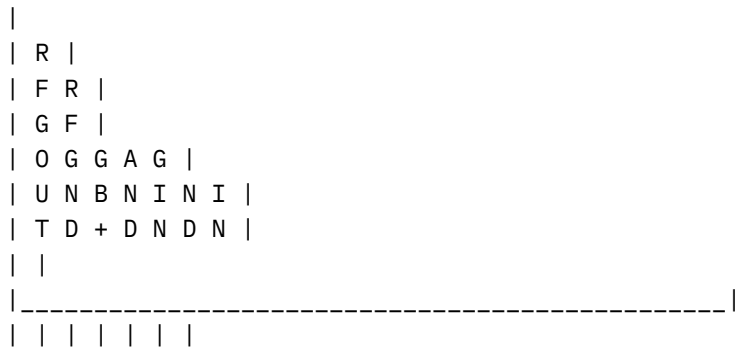
Supply voltage = 16.0V
Power input = 250mW
Power output = 14W
Total supply current = 4A

Nomimal operating characteristics:

Supply voltage = 12.5V
Power gain (for Pin @ 150mW or less) = 12W

Efficiency at rated Po = 35% min.
Harmonic content at rated Po = -30dB min.
Load VSWR at 14V, 14W, low frequency = infinite:1
Input & Output impedance = 50 ohms
Gain control range when operating = 10dB min.
Class C operation

Pin designations when the module is viewed from above and the leads are pointing downward. There are 3 leads on the left and 4 on the right.



Hope this info helps.

> similar problem? Should we all stop buying Kenwood. Please post comments, Thanx

If I look with manufacturer's eyes, I could see some reasons for
a response like that.

1 There were no boards allocated to the service dept.
2 The boards are available, but the service books show no part number.
3 So many of the boards are needed for new orders that they have
pulled all of the service dept's boards for new production.

The list can go on and on, but to me it adds up to poor customer
relations. Sometimes slip-ups occur, and I can excuse them provided
someone responsible takes corrective action when informed. I would
suggest yor friend try calling and talk to someone with service
management authority to see if they will do something. If not,
I would be VERY upset.

Good luck to your friend.

>
> Wayne T

Wayne,

I had a problem with the control board on a TM-741. There was
arcing and a carbon track. I cleaned out the short and the radio's
OK. It sounds like Kenwood wants to do board level rather than
component repair. Unless it's a multi-layer board I'd get a second
opinion.
One of the reasons I like Collins gear is that you can still get
some support from the government division of Rockwell. If Kenwood
didn't come out with a new radio every two or three years it wouldn't
cost so much to support a parts inventory. The price of progress is
obsolescence. Until this problem hits Kenwood in the pocket, don't
expcet them to change. (I was gratified to find GM had parts for
a 14 year old car I have)
If the radio dealers sell more of the older rigs than the new
ones the problem will correct itself.

^^^
Is this a typo? This is in the VHF-high television band. Channel 12
(204-210 MHz) to be exact. Hate to think of the TVI implications if
208.345 is in fact the correct frequency. In the early days of television
some VHF channels were shared with other uses, but this came to an end
around 1948 (the other users were given Ch. 1, 44-50 MHz, but that is
another story). Some of the lower UHF channels are shared with other
users, but careful frequency coordination seems to take care of any TVI
problems.

Source record: 211797

sounds to me like they are 800 mhz mega's. they may be programmable either by diode matrix or eeprom if they are later radios. they were 35 watt output and at best mediocre on their performance. i have used aerotrons for years since I live in Raleigh where they were made. Aerotron's best radios were the MPAC series of high power lo-hi-uhf bands and if they had stuck to building special applications for public safety users they would be here today. Aerotron exists in a convoluted form as Repco sales in Florida. If you are in doubt as the the exact config of your radio it will most likely have a type "n" connector on the front if it is 800 meg and a pl259 if it is lower freqs. model number will be 90sm35..i think?? 60 was vhf hi 70 vhf lo and 80 uhf. there is a guy near me named Larry Medlin at M&M communications in Youngsville, NC that was the last service manager and still has strong ties to Florida..he may be the only one left around to help with programming.

regards

-mike-

ps..could be a lancer mobile too if the case is grey and not brown.. very similar radio to a mega though.

From: thooker@psl.nmsu.edu
Message-ID: <thooker.53.00108351@psl.nmsu.edu>
Source record: 211652

Hi everyone,

I posted this rig last week, and had a great response.
However, nobody purchased the radio! So, I must have
the price too high. I am also now willing to seperate
the components:

TS850S/AT: The basic radio with the automatic antenna
tuner. Comes with two optional filters, the 500Hz
CW and the 1.8KHz (i think) SSB filter. In excellent
condition, with box and manual. Asking $1325

Kenwood IF232C: RS232 interface for above radio. However,
I dont have the book on this. Asking $60

Kenwood SP31external speaker, with passive filters built in
No box or manual. Asking $50

Kenwood PS430 external power supply. Asking $100

What I did to price these accessories is take the current HRO price
and divide by 2. The TS850 price from HRO is over $1800 with those
filters, so guessed at what a fair market price would be.

One OM asked for just the filters, so if somebody wanted the radio
without filters, I would be willing to sell individually.

All offers considered.

Thanks,
Tracy
KA5ECS

Are you sure? It may be that I just have my technical facts a little
screwed up here, but some local hams told me that when they (illegally)
use their modified HT's on a GMRS frequency, they have to hold the
microphone away from their mouths more because they overmodulate the
frequency (when received on a standard GMRS radio).

Is there something I'm missing here?

Source record: 211654
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I inherited a Yaesu FTC-1143 UHF ht which is programmed with 5 business band frequencies in the 450.00 Mhz range. Unfortunately there is no manual with this radio and I need some help as follows:

1. There are only 5 channels programmed. Is that the maximum number or can it be programmed up to 10 (or more)?

2. Is it keyboard or computer programmable? If keyboard programmable, what are the codes or sequences? If computer programmable, where can I get the software and cable?

3. What is the frequency range and can it be programmed for the ham band?

4. Can anyone provide a copy of the manual and for which I would be prepared to pay.

Any and all help will be appreciated.

Thank you.

2679. Ferrite Dip Chokes

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-04 00:00:00 UTC
From: EUGENE.WELCOME@rook.wa.com
Message-ID: <86D88C98@rook.wa.com>
Source record: 211714

Ferrite Epoxy Dip Chokes of many values with high " Q " and compact
size are used extensively in TVs and VCRs manufactured in Japan,
Korea and Tiawan. I hope his is useful to those who build electronic
gear as it has been for me.

The color dots are 1 and 2 on top with dot 3 on the end. They
indicate the value of inductance in microhenries or " uh " since this
is the closest to the symbol for micro which would look like a " u "
with two tails instead of one. Dot 1 and Dot 2 are the value
indicators and Dot 3 is the multiplier. The Resistor Color Code is
used also for some capacitors.

2680. Mod for Yaesu FT-530

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-04 00:00:00 UTC
From: hbcsc274@csun.edu
Message-ID: <44t2td$1hf@nic-nac.CSU.net>
Source record: 211715

Here is the summary of a mod that I've put together from talking to people
on the phone, radio, and email for the Yaesu FT-530. It is a very simple
mod and it allows extended rx & tx.
This mod only applies to the newer models of the 530. I don't know what
serial number implies the newer model, but my 530's serial number begins
with 4J381xxx and was purchased in June 1995.

1. take off the battery pack from the bottom of the radio.
2. unscrew the four screws on the bottom to release the bottom plate.
3. after you open the plate, you'll see a green wire on the right side
of the radio (if you hold it with the front panel on top).
4. simply cut this green wire and use some electrical tape to prevent it
from touching other parts of the radio.
5. replace the bottom plate and screw it back in.
6. attach the battery
7. hold both the up & down Mhz arrow buttons and press the power button at
the same time. this will enable to the mod. It is like a toggle, if you
do it again, it will disable to the mod.
8. Now you should have rx 110-180, 300-500, 800-950, and tx 130-180, 400-480.
Note: this mod will reset your radio and all memories will be erased.

Here is a second mod you can do to get more rx.
1. On the 70cm band, program your radio's lower (L) and upper (U) memory
limits to 300 and 950.
2. Turn to the Lower memory channel.
3. Press MR once and you should see a four tiny little arrows right below
the channel number.
4. Once you see these little arrows, you can enter any frequency
from 300-950 Mhz directly on the keypad.
You can also store these new rx frequencies in memory if you like.
Note: Although you can enter 800-950 Mhz into the radio, I have not heard
anything in this range. It is rumored that the components to receive on
this band is no longer made in the FT530.

Disclaimer: Perform these mods at your own risk. They are not guaranteed
to work on your radio. And remember not to transmit out of band!!!

any questions or comments? Send to hbcsc274@csun.edu

2681. *** 16 MEG MEMORY FOR TRADE ***

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-04 00:00:00 UTC
From: davidst1@aol.com
Message-ID: <44tclu$m32@newsbf02.news.aol.com>
Source record: 211716

Windows 95 folks and all:
I have two 16 MEG 4x32 70ns no parity 72 pin memory SIMMS available for trade. They are tested good. I'm looking for an all-mode VHF/UHF transceiver for sat work (not a handheld). Prefer someone in driving distance of Las Vegas or who is coming here for a visit, but will talk about shipping. I will also consider trades for Drake 7-line equipment.
Thanks and 73.

Good to see someone reinforce the idea that it doesn't take a genius to
get a ham license. This kind of post pretty much refutes the whole code
vs. no code debate.

You have obviously never had your mailbox stuffed full of
filth by someone using an anonymous remailer.
And I assume you've also never lost your temper.

It's nice to know saints can get ham tickets, too.
Does the church know about your righteousness?
You should apply for sainthood. I understand
it can be quite profitable.

Just a lowly sinner,
Dave AB5S/7

: Not to overstate the obvious, but the aircraft signals *are* AM
: while the DJ-160 receives *FM*. Perhaps the AM detector circuitry
: is missing, or perhaps you have to manually enable it with a setup
: function. What does the fine manual have to say about it?

When the DJ160 and 162 came out, I think that Alinco was still young and had a technical writer that knew nothing of radios write the manual. In other words, no help there. The manual doesn't even address the lith battery that maintains memory when the unit is shut off. I'll find time today to call Alinco and see what they say but I suspect thay will either tell me to send it in for $$$ or that it is not possible. What ever, I'll post it here. Thanks to everyone except the guy that offered to *sell* me the mods for extended rx for $5.00....No thanks. :-(

Regards,

-Marc

: under 1500 kHz to add sensitivity.

Have a look at the circuit diagram of the RX input filters, when below 1600kHz, you'll find a filter/attenuator combination is switched in. You may wish to remove the attenuator parts. Your pre-amp wasn't designed to go low in freq and you'll find its gain falls off rapidly in this area, pulling the atten will work better.

This radio is fairly prone to overload problems and the combination of big signals in the broadcast band and greater sensitivity may prove troublesome. Consider adding a preselector filter.

To make receiver more selective I
: have added an extra AM filter (Murata 2.7 kHz) to the 455 kHz IF
: section but in both cases the results are not satisfactory.

2.7kHz isn't enough for AM speech, that's a filter designed for SSB use, it will certainly make things worse. Think of 6kHz for speech AM 12kHz for music.

You could try extracting the 455 kHz IF signal and putting it into an outboard synchronous detector (one design in 1995 ARRL book)

Cheers

I guess I haven't been so lucky with my HTX-202. The squelch circuit seems to "go away" every six months or so. I return it to the store, suffer through 20 minutes of paperwork and they send it off to repair. Normal turn-around time has been 2-3 weeks. Sometimes it comes back fixed...sometimes it doesn't. Anyway, I'm not it love with this radio and would be glad to get rid of it and buy a "real" ham radio like a

ICOM or something.

Yes, there is. It is a separate unit, but works just fine. It is
the model AT-250. It's cabinet matches the 430 and it cables up
to it. They seem to sell for $200 - $300 as far as I can tell.

From: lenggen@fasnov1.zuerich.sc.philips.nl
Message-ID: <44tfv9$fla@phcoms4.seri.philips.nl>
Source record: 211731

I've had one of the first SG230 for several years, but was not very happy with it. Probably due to RF on 12V line, it always started to retune on some bands. If you don't realize it immediately and abort your transmission, you will end up with burnt relay contacts.
Some months ago I upgraded to the latest revision, which has an additional control line to either force or inhibit retuning. Since then it works fine.
I'm using it with a 10m long vertical on all bands from 1.8 to 29.7MHz.
The spec indicates a typical SWR of 2:1. In my setup, it is 2.5 on some bands, 1.0 on others.

>type a sticker? I've heard of part-15 type A, Part-80
>type A, etc, but dont know the differences.

That's a tall order Joe. The FCC requires type acceptance, certification, approval, and other levels of testing depending on the frequency, use, and the environment where used! Some receivers even require extensive testing, and some receivers are even banned!

I do type acceptance, verification, and certification for a few companies on a contract basis, and despite this work several times a year I would not attempt to copy or explain the rules here. The rules are too complicated. You should buy a copy of the FCC rules and regulations, they do not cost very much. If you depend on hear-say you may get in big trouble later if you are a manufacturer.

>
>I dont have access to a library of congress here in
>Formosa, so a summary via the 'net would be superb.
>
>b. Since hams can home brew gear, aside from some
>relative spectral purity, what other type a is
>required?

Most homebrew equipment is exempt. The catch all is a clause that it must meet current state of the art emissions levels and not cause trouble. For manufacturing the FCC requires testing of all spurious and harmonic emission levels, often using standard fixtures for conducted levels on power leads, and well defined measurement systems for radiated emissions.

For example, HF Amateur RF power amplifiers have restrictions on gain that vary with frequency, spectrum purity, transmit receive switching, drive power, and frequency ranges. They are the most simple device, and only require type acceptance.

>Why do ham manufacturers have to wait for
>type a on ham gear before selling in the USA?
>Principle being what's the diff between homebrew gear

>and store purchased gear...it's still used in the
>Amateur service, so why the type a before putting the
>new "TenAliconwoodaesu" on sale in the states?

The FCC worries because if the design is poor or construction is poor, the homebrewer only creates one problem. The manufacturer can create huge trouble and not be around later to fix it! It is a very good rule.

Source record: 211744

I have been asked to research how different amateur radio clubs make innovative use of technology to communicate to, and with their members. I have volunteered to research this issue for the Montgomery Amateur Radio Club in Maryland. My goal is to present a report to the membership on how others are using packet, the internet, BBS services, voice mail, and even programmed repeater announcements to keep the flow of information in front of the members. I feel strongly that the time has come to consider the club newsletter as only one vehicle for the dissemination of information. Your comments are appreciated. If you are a member of a club, please share with me what your club does, or what you wish they did do.

When all responses are compiled I will make the total file available for anyone who wishes to see it.

Thank You.

2710. Tube Availability and Solid State Replacement

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-04 00:00:00 UTC
From: dcrowe@lpl.arizona.edu
Message-ID: <dcrowe-041095130738@shino.lpl.arizona.edu>
Source record: 211745
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have been licensed for over 30 years, so I am familiar with a lot of the tube rigs which are now available at low prices. But are new tubes still manufactured? Have any of the attempts to replace tubes with solid state substitutes (e.g., FETRONS) been successful, and are these products still available?

In spite of the lower performance of the tube rigs, the need for parts replacement with age, and warm up drift, etc., the real challenge to keeping the old radios working may be the availability (and price?) of tubes or their replacements. I would not be interested in depending upon sources of old (gassy?, used?) tubes. Only if new manufacture is available would I consider one of the old radios.

Thanks,
Devon

: Thanks for any advice.

The government typically smashes the crystals in surplus radios that
they sell, if they want to make sure nobody transmits, on military bands
and such. Wouldn't be surprised if the police did this too. You might
check. Most or all of that stuff probably has ham or general-purpose
uses. Sure, take it to a hamfest. Course, depending on how hard those
radios are to mod, you might have to practically give it away to get
rid of it... The guys at hamfests who have commercial stuff typically
have tons of it and it's a bit hard to sell.

I don't know what this is about, but I suspect it just might
have something to do with someone posting a buy or sell ad here,
since that keeps happening despite them not belonging here.

But since there are real Nazi's out and about, I think it is
completely out of place to call someone a Nazi unless they
are. People who could be called Nazi's would include Hitler,
all of those members of the Nazi party from that era, and also
neo-Nazi's of today. ALso, I think calling white supremacists
Nazi's would also be appropriate.

I have a Jewish friend who has mentioned to me a number of times
how using the words Holocaust and Nazi for every little slight
that happens in the here and now diminish all that happened to
so many Jewish people during WWII.

So don't start using the word nazi when it doesn't apply. Go
after the real Nazi's who want to pedlle their distorted vision
on the world.

2716. Need info on Yaesu FT-2200 and Icom IC-2000H

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-04 00:00:00 UTC
From: killian@aztec.asu.edu
Message-ID: <44u8ls$2hh@news.asu.edu>
Source record: 211751

I am considering buying either a Yaesu FT-2200 or an ICOM-2000H.
One feature that a Yaesu FT-2500 has that I like is something
that they call "pager tele-forwarding". A page sequence is sent
to the FT-2500 (like "222*111") then the FT-2500 retransmits
this same sequence. Does anyone know if either (or both) of
these two radios are capable of this?

Also, can anyone describe for me what the "DVS-3 Digital Voice
System" is and how it works (for the Yaesu FT-2200) and is there
an equivalent feature on the Icom?

One more, does anyone know what the "pocket beep functions" are
that Icom talks about? How do they work and are they optional?

I wish that Yaesu and Icom would publish a LITTLE MORE info in
their spec sheets. It is kinda hard to make a decision on a
radio when they have SO MANY FEATURES and you don't know what
they are until AFTER you buy the radio!

Thanks.

P.S. Please Email response to killian@aztec.asu.edu.

Thanks again.
Mike

Source record: 211656

Can't get the two to talk. Put a VOM on the BayPac and can watch it change the tx lead when I use their test software. But I can't get the FT-51 to tx using the resistor they suggested, the one BayPac suggested, and even trying with no resistor at all. The radio transmits using the ptt. I'm ready to buy a hand mic just to trouble shoot and see if the FT-51 had a flaw from the factory.

Anyone else get the two to talk. Yaesu and BayPac are point fingers at each other!

2720. Icom 745 Rx problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-05 00:00:00 UTC
From: "Thomas D. Cox" <tomcox@indy.net>
Message-ID: <44vdhn$9h8@news.indy.net>
Source record: 211658

I have a used Icom 745 that has given me a lot of good use, but it has an annoying habit of losing receive rf gain at times. The loss is intermittent to begin with, and lately constant. S9+20dB signals drop down to nearly inaudible at worst. At first I thought it was thermally related, but it's too random for that. Sometimes it happens soon after the rig is turned on; sometimes after it's been on several hours; sometimes not at all. It's been home to Seattle for checkout, but they couldn't get it to fail. Of course. The tech I spoke to said, "Maybe UPS fixed it!" It worked fine for months after I got it back, but it started up again, more and more often, and now it seems to be permanent.

I eliminated antennas as a cause. It's common to both HF and LF antenna inputs, and happens on all bands. Sometimes, banging on the right side of the case helps. Sometimes it helps the radio, and sometimes it just helps me....;) Not a long-term solution, obviously -- unless I use the sledge hammer.

Any ideas where this loose connection or solder joint might be? I've been over the boards with a flashlight and magnifying glass, but haven't found anything that looks suspicious. Neither did the Icom techs. IDEAS?????

Well, it's a mighty involved section. I just bought my 900 a few weeks ago, and love it!! I'd be happy to FAX a copy of the page to you.

Basically, it defaults to an 88.5 Hz tone. You can display and select another tone by hlding the -FAST- button while pressing -FM-, turning the tuning knob, and pressing -FM- again (to accept). The tone you select applies only to the current VFO, but can be stored in memory. There are 34 available tones!!

BTW, the 88.5 Hz default automatically transmits during FM repeater transmissions.

The FM part of the manual is on pages 24-5. Good luck!!

How about the tx/rx relay? I'm using a 735 with a kw amp and on
occasion the relay sticks on switching back to rx from tx. A belt to
the side of the rig unsticks the relay, but when I send it in next
time I'm gonna have it replaced. Does it happen after unkeying?

Source record: 211671

> I have been licensed for over 30 years, so I am familiar with a lot of the
>tube rigs which are now available at low prices. But are new tubes still
>manufactured?

Yes, and some are very high quality products (Svetlana, for example).
There are continuing rumors of some new US assembly lines starting up as
well -- primarily to serve the glass audio crowd.

>Have any of the attempts to replace tubes with solid state
>substitutes (e.g., FETRONS) been successful, and are these products still
>available?

Yes, sort of. Don't know of any current manufacture. The real question
is, why would you want to do this? :-)

>
> In spite of the lower performance of the tube rigs,

This statement may be true in some cases, but in many respects the high
end tube radios of a few years back hold there own quite well against the
typical plastic import stuff, and in many if not ALL respects offer better
performance -- such as phase noise, audio quality, AGC performance,
performance in the presence of high noise, "feel" (tough to quantify, I
admit), etc. My 40 year old SP600 can hear things my multi-thousand $$
super whizzo silicon thing doesn't know exist.

At least the old receivers and transmitters looked like what they were
meant to be instead of just being a variant of the latest plastic
mid-range import stereo junk.

>the need for parts
>replacement with age, and warm up drift, etc., the real challenge to
>keeping the old radios working may be the availability (and price?) of
>tubes or their replacements. I would not be interested in depending upon
>sources of old (gassy?, used?) tubes. Only if new manufacture is available
>would I consider one of the old radios.
>

Well, most of the solid state stuff also will suffer from the "parts
replacement with age" syndrome. Warm up drift? Unless your solid state
box has expensive ovens in all of the frequency control circuits, it too
suffers from warm up drift. Don't believe the rock solid dial reading.
Ok, ok, it may not be as great -- but it all depends on what products your
talking about. An R-390 will stand up against most modern stuff in this
department.

Tubes used in the old gear are still common and in plentiful supply (there are some exceptions, but workarounds exist -- and the exceptions are just that -- exceptions). And prices are not high. Certainly less than the cost of shipping your box to timbuktu, getting it fixed, and getting it back. While they may not be NEW (as in manufactured yesterday afternoon) they are NEW as in New Old Stock -- never used. Old does not mean gassy.

And your missing the whole point of the vintage radio gear anyway -- it doesn't look, feel, or operate like you just unboxed it after buying it at Circuit City. Its real radio stuff -- with big dials, meters, and tuning knobs you can get your whole hand around :-) Fat fingers are not a problem. AND .. it will keep you warm, and give you light ..... and just make you FEEL GOOD :-)

Grant/NQ5T

2734. IC-706 User Review

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-05 00:00:00 UTC
From: w7gz@primenet.com

by Alf NU8I/G4ABB
alf@agreen.iac.honeywell.com
Scottsdale, AZ DM43an

Icom IC-706

General comments:

Very compact; particularly with the detachable front panel, should be no problem for anyone finding a space for it at home or mobile/portable. I didnt weigh it, but it seems light enough to put in a backpack for some interesting mountain top operating!
The front panel layout is quite good, except for the RIT button. The tuning knob feels smooth, and can be adjusted for a friction feel, or a reasonable amount of flywheel action.
The manual seems pretty comprehensive, and there is a quick reference card. It appears just about every option can be set up with its own default, based on band/mode etc., so it should not be necessary to spend much time messing around in the menus. I must point out though that _I_ have not played much with this yet. The rig is certainly usable 'out of the box'.
There are a bunch of connections on the back panel, for connecting a tuner, rtty stuff, computer interface, etc. No low level rf out for a transverter, however.

On the air:

On receive, the rig seems fairly 'quiet'. Even with the pre-amp on, the audio gain has to be set well advanced to make much noise out of the speaker. On 6m, connecting the antenna gives a fair increase in noise (I live in quite a noisy environment), and the W7US beacon, abt 100miles away, sounded as good as it does on my regular rig (HB txvtr > IC735). I couldn't find any other weak signals to try it on.

I didn't find any birdies on 6 or 2 apart from my usual 'friends'; in fact some were missing; artifacts of the previous transverter scheme I guess. I was afraid I would get some inter-mod from local commercial services, but it seems to do a good job of eliminating that.

To my NW, I get some fairly bad power-line crud, which my 735 noise blanker removes completely. The NB in the 706 didn't seem to do as good a job. The S-meter reading dropped, but I could still hear the QRN. However, I didn't have a signal to listen to through the noise, so it may be good enough in practice.
I have not yet had a chance to try it in the car, so I don't know how well it will handle automobile ignition noise.

Working local stations on 6 and 2, the immediate reaction was that the internal speaker was not up to the job. It was really quite unpleasant to listen to; very tinny. Plugging in an external speaker solved that problem. I didn't try with headphones, as I don't yet have an adaptor for the mini phone jack. I'm sure they would sound really good. Again, I had the impression that there wasn't really enough audio 'umph' available. In a noisy mobile environment, an external amp would probably be needed. Tuning was really smooth, particularly set for 10Hz steps. No noticeable steps/bumps/clicks etc, as I have heard on some rigs.

Reports on the transmitted audio quality were uniformly favorable. (note: this is on sideband, I didn't bother with AM or FM). The compressor had a noticeable effect, but the effectiveness of that will have to wait for some noise level paths.

On the bench:

Test gear used: HP8591A Spectrum Analyzer, HP608D generator, assorted Weinschel attenuators, HP3400A true rms voltmeter, various wideband directional couplers, calibrated with the 8591.
I do not have a noise figure meter; to check sensitivity I found the level at which I got a 3dB increase in noise with the audio level set as low as would give a stable reading on the 3400. The assumption is that at that level, the internal AGC would not have kicked in. The noise figure is then the signal level, in dBm, minus -140.3 (for a 2300Hz assumed bandwidth). (I think I've got that right; I won't be offended if someone corrects me, though!).
If someone local has a noise meter they could loan me, I'll run some more detailed checks.

Receiver: All the following were with the internal preamp ON.

In band:

freq, MHz threshold dBm noise figure,db
28.600 -134.5 5.8
50.125 -136.1 4.2
144.200 -136.2 4.1
148.000 -137.0 3.3

Out of band: (to nearest dB)

60.0 -132 8
70.0 -134 6
80.0 -132 8
90.0 -133 7
100.0 -133 7
120.0 -130 10
130.0 -113 27
140.0 -104 36
150.0 -103 37
160.0 -96 44
180.0 -78 62
190.0 -75 65

This looks really interesting in graphical form! The sensitivity is quite uniform up to around 120MHz, then drops off fairly steeply. The exception, of course, is in the 2m band. In fact, there is a very noticeable change in the background noise _immediately_ you tune outside the 144-148 band limits. I suspect that a different front-end filter or extra pre-amp is automatically switched in. The manual does not include a schematic, (unusual for Icom), so I can't verify this.
I did not have time to run the checks below 50MHz, but the background noise and qrn level sounded similar to that at 50.125, so I dont expect any major reduction in sensitivity in this range.

Transmitter:

50.125 Power max 89.6W min 2.5W
144.200 max 9.4W min 0.5W

Power control operated smoothly in between these limits.
Even though it seems a little low, 89W is within 0.5dB of the rated 100W, and that is within the measuring error of my setup.

No spurii could be found less than 60dB down from the desired output.

Some specific questions sent by e-mail:

How bad is the intermod?
No apparent problem from out-of-band signals. Haven't had a chance to try with strong in-band local stations.

How well does the noise blanker work?
Not tested on ignition qrn. Not as effective on powerline spikes as the IC735.

How does it do receiving WBFM?
Using a regular dipole in the shack, pulls in the stations better than my A/V receiver. Audio sounds good, though not up to hi-fi standards, on an external (small Radio Shack) speaker. Absolutely crappy on the internal speaker.

Is power output up to spec?
See above.

How warm does it get just receiving?
Case temp rises less than 10F above ambient after several hours of operation.

How difficult are menus to navigate whilst driving?
Haven't tried this, and wouldn't recommend it. Set what you need in the memories ahead of time, and you shouldn't need to mess with this.

Does it truly have poor receive above 160MHz?
See above. I would expect it to be pretty poor above 130MHz, except for 2m.

Reception on the broadcast band 530-1600 khz?
Only listened at night with my HF beam as an antenna. Sounded pretty nasty, but about the same as my IC735. I expect it would be fine during the day,

and/or with a proper antenna.

On wide fm on the TV sound signals at about 190 mhz?
With a 3foot piece of wire as an antenna, I could hear nothing up there
except some pops and crashes. Based on the sensitivity tests, above, I
would expect it to be pretty poor.
Is there just one coax connector on the back for all bands hf, 6 and 2,
or is there a separate output for each of the vhf bands?
One socket (SO-239) is for all bands < 60MHz. The other SO-239 is for >60MHz.

What kind of cable do you need to seperate the front panel for remote
operation- do you need to buy theirs or can U build it when you need it with
parts on hand?
It's a non-standard connection arrangement (spring-loaded pins) so I expect
their cable is the only way to go. Trouble is, its not available yet. 8-(

Does it come with a mobile mounting bracket and a mic?
Mic, yes; bracket, no.

Does it have a CTCSS encoder built in, or is that an option (for PL tone
activated 10/6/2m repeaters)?
Yes it does, and also 1750Hz for the Eu repeaters.

How much you have to give for it?
$1299 + tax

Is it all mode on all bands?
I didn't see any restrictions per band.

>
> Darrell Leach
> KD6LRC

Hi Darrell, unfortunately the 2 meter module will only go as high as
174 Mhz. This is restricted by the programming of the microprocessor
within the radio.
I don't recall offhand what the out-of-band coverage is on the
220 MHz module but it may more likely cover 209 MHz.

Regards !

Here in Canada we have a new license class. It allows you to walk into
a class on a Saturday morning without even knowing what a ham is, not
to mention any theory, and walk out later that day with a call sign.
The No Clue / No Code is here...pretty scary stuff.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

QRZ Industries VB-8A Natural Voice Recorder is a flexible, multi-purpose digital voice recorder with many unique features including up to 100 seconds message time and up to 100 seconds per voice message, keypad or optional computer console control, auto-incrementing serial number, single or auto-repeat playback, variable pause control, message chaining and other features too numerous to mention.

This unit has been configured for the Yaesu FT1000, 990, etc. but can be easily modified for other manufacturers products through rewiring the pinouts in the mic jack connector. Also included are "optional" computer serial connectors for Yaesu (and which have never been used).

This unit is like new and I open to offers or willing to trade for new or used hts.

From: turner@safety.ics.uci.edu
Message-ID: <454dfv$jr@safety.ics.uci.edu>
Source record: 211607

Hi Tony:

I used to use the frequency counter method to set the carrier points, but you never can tell where the filter really is. I also have heard that using an audio generator into your mike jack will do it, you can set it for certain power output given the lower and upper limits of the frequencies of your voice. I also used the AG6K method, adjusting for carrier suppression on USB/LSB vs AM reception using my TS440 20 db attenuator as a standard. That did pretty well according to audio reports I get.

I have now settled on using the receiver "ear" method. I use any method to get into the ball park, then listen to signals with the IF shift centered. I try to get the sound of the received SSB signal somewhere near right. I then adjust so that both USB and LSB sound about the same (with dummy load, I use only noise level to check the two sidebands). Then I check again, and I adjust the IF shift control to make sure it was about centered resp. the other IF anyway. I just do this a couple of times and then check the transmitted audio on a spare receiver. I seem to hit it pretty darned well this way. I have had to do it a lot, I keep trying different 455 kHz filters in my TS 440 main IF stage.

Good luck.

. . .by some. But not all instances of using ham gear out of the ham bands are
unlawful. CAP and MARS are two examples..

> Yes, that is true, but in the US, you cannot get FFC aproval for a HAM
> transmitter that transmits out of band, which effectivly eliminates it
> sale (as a retail item).

Gee, that mans that EVERY SINGLE ONE of the radios I've bought in the last 15
years was "effectively eliminated as retail items." This will come as a
surprise to Yaesu, Icom, Kenwood and Azden.

I can't address the info from ICOM issue, but you don't need a MARS license to
get the info. My Yaesu was modified long before I became involved with MARS.

From: killian@aztec.asu.edu (MICHAEL KILLIAN)
Subject: Need info on Yaesu FT-2200 and Icom IC-2000H

I am considering buying either a Yaesu FT-2200 or an ICOM-2000H.
One feature that a Yaesu FT-2500 has that I like is something
that they call "pager tele-forwarding". A page sequence is sent
to the FT-2500 (like "222*111") then the FT-2500 retransmits
this same sequence. Does anyone know if either (or both) of
these two radios are capable of this?

Also, can anyone describe for me what the "DVS-3 Digital Voice
System" is and how it works (for the Yaesu FT-2200) and is there
an equivalent feature on the Icom?

One more, does anyone know what the "pocket beep functions" are
that Icom talks about? How do they work and are they optional?

I wish that Yaesu and Icom would publish a LITTLE MORE info in
their spec sheets. It is kinda hard to make a decision on a
radio when they have SO MANY FEATURES and you don't know what
they are until AFTER you buy the radio!

Thanks.

P.S. Please Email response to killian@aztec.asu.edu.

Thanks again.

From: dcrowe@lpl.arizona.edu (Devon G. Crowe)
Subject: Tube Availability and Solid State Replacement

I have been licensed for over 30 years, so I am familiar with a lot of the
tube rigs which are now available at low prices. But are new tubes still
manufactured? Have any of the attempts to replace tubes with solid state
substitutes (e.g., FETRONS) been successful, and are these products still
available?

In spite of the lower performance of the tube rigs, the need for parts
replacement with age, and warm up drift, etc., the real challenge to
keeping the old radios working may be the availability (and price?) of
tubes or their replacements. I would not be interested in depending upon
sources of old (gassy?, used?) tubes. Only if new manufacture is available
would I consider one of the old radios.

Thanks,
Devon

I have a Kenwood TH-22AT, and it is a very nice radio, but it has a
slightly loose frontend... (This because I get bombarded with intermod
from pager trasmitters on the 152/157MHz band in my area)...

If you are serious about repeaters and such, I would advise getting a
dual-bander.... I wish I would of bought a dual, since I am usually
indoors, and UHF penetrates better thru brick and such...

The *better* Type Accepted radios (GE), use phase modulation. :-)

Actually, when the FM rig uses the proper pre-emphasis, the resulting
signals are indistinguishable from a PM signal. It just takes extra
circuitry for a FM rig to output the proper signals.

> I have a 70's vintage ssb transceiver (Atlas 210) that I suspect has drifted out of its filter passband by a few hundred hertz. My question is what is the best way to adjust?

Tony-

Although I'm not familiar with the Atlas, I have played with the carrier oscillators in several other rigs.

More recent rigs, such as the Kenwood TS-430, have an IF shift control, that varies the carrier oscillator across the passband of the SSB filter. Transmitted or received frequency is not affected, because the same heterodyne oscillator is used to convert to and from the IF (carrier) frequency. As you may have observed, it doesn't work very well if the carrier is completely outside the filter passband.

Naturally, the best adjustment comes from using the appropriate procedure from a service manual. But, you may be able to tune it "by ear". Adjust the carrier for each sideband, while listening to signals on the air. When you are through adjusting, the noise on a quiet frequency should be about the same on both upper and lower sideband.

>
>
Nothing wrong with a no clue no code as long as operating benefits are very restricted. IMHO the bigger problem is the test for higher class tickets has become too easy. In the USA, many people with no comprehension of simple dc circuits have extra's now.

While I have no problem no clue no code, I have extra problem extra dumb extra class.

2774. BNC Woes

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-06 00:00:00 UTC
From: Dave <peterson@fnal.gov>
Message-ID: <453q2o$foo@fnnews.fnal.gov>
Source record: 211700

Carrying my dualband HT (Yaesu FT-470) with me everyday causes considerable wear on the BNC connector. The relatively stiff dual-band antennas create large amounts of torque on the connector and eventually grind down the little nubs on the side of the connector. The antenna then wobbles, which just accelerates the deterioration of the connector. I have had center pins on the antennas break and recently lost one of the spring fingers on the outer conductor of the antenna contact.

The possibilities to remedy this problem are:

1) Continue to replace connectors and antennas. Are there high quality connectors (stainless steel, etc.) which would fit an FT-470?

2) Find a more flexible VHF/UHF dual-band antenna. Any suggestions? I would like it to have good UHF performance (i.e. 1/4 wavelength).

3) Use a different type of connector on the radio. TNC or SMA would be fine. Are there dual-band antennas available with those connectors?

Thanks,
Dave KD9IG

One of the bigest differences between HAM and GMRS (Type acceptance)
is that the operator cannot enter a frequency. That is they may have
many pre-programed freq's, but they may not enter them.

Message-ID: <FAUNT.95Oct6172115@netcom5.netcom.com>
Source record: 211619

There was some discussion of mods to the 706 in the uk group, since
they want to make it cover 4M. Apparently it immediately switches to
the 144 MHz portion, but there's a 2M filter that kills off response
at 70MHz.
I checked with ICOM parts and they said that they don't expect the 706
Service Manual for 6 months or so. Ooof!

Hi Thor,
I recall that these rigs went for about $600 new, so $300 is a fair price if it is in working condition. I have had one of these rigs since 1988 and have had nothing but good reports from it. Feature wise, it does everything a dual-bander does today, except maybe for some of the extra fancy memory scan / dual watch functions. At 45 watts out on 2, 35w out on 440, it is also in the same power class as the new dual banders.

What I particularly enjoy about this rig is it's rock solid front end with GaAs FET preamp. It does not pickup the intermod and garbage like the newer Kenwood dualbanders. It can be modded for cross band repeat, and wide band tx/rx. Kenwood later came out with the TM-731A, which had an LCD display (easier to read in a sunny vehicle) and better memory scan features. Kenwood also sold an upgraded LCD display to be added to the 721A. I never added it...maybe you can find one out there still for about 20 or 25 bucks.

Hope this info helps. 73 Joe BV2/N0IAT in Taipei, TAIWAN (Formosa)

I have used nothing but MFJ Tuners for a number of years and all have
worked very well for me. I did buy their Differential T tuner but
returned it and bought the Versa Tuner III instead. The Differential
T's roller inductor was nowhere near smooth and the counter was driven
with a rubber belt making it susceptable to errors from slipping. That
is the only tuner I would not recommend in the MFJ line.

My Versa Tuner III is great and easy to tune. Have used it on all
bands from 10 to 160.

2794. IC-706 ALERT! Deaf as post on VHF!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-07 00:00:00 UTC
From: ab910@lafn.org
Message-ID: <1995Oct7.195457.11488@lafn.org>
Source record: 211632

I bought my 706 thinking it, like other Icom radios, did out of band receive and transmit with acceptable spec's. WRONG!!!

My 706, like others on the net, is deaf as a post beyond the 2m ham band. 162.550 weather is loud and clear on my RS 2006 scanner with the built in whip. The 706 hears nothing there even when connected to my discone up 25 feet! On 154.830, LAPD Tac, my 2006 again can hear the action loud and clear, sometimes without ANY antenna......the 706 hears nothing.
And, the corker for me, a 1Kw paging transmitter less than a quarter mile away is off the scale on every radio I've ever had antenna or not. The 706 on the discone gets it at 1/2 scale!!! (And no, that's not it.)
Now, perhaps Icom put a hidden gadget in there to help with bleed over into the 2m band. Why did they not tell anybody this? I got the 706 to hear the VHF stuff a TS-50 can't. Now I find it can't either!!
I have the mod. for below 50Mhz to enable transmit everywhere. I haven't done it yet and probably won't. I really like the little radios other features but with this big a flaw it's going back to the candy store come Monday. Unless there's a mod. for VHF receive it goes, as I can't afford a $1299 sculpture !

: about 3 inch wound coil, and just ta�pping the coil til it is close to SWR?
: Will I need a small tuning c�apacitor? what value/size? thanks... Bob

Bob, you can use a simple arrangement with a coil only. Tie one side
of the coil to the vertical. Tie the other side of the coil to ground.
tap down on the coil to resonant the system on 1.8mhz. then tap up from
ground to find 50 ohms to match your coax. So you need two taps, one on top
to resonant and one on bottom to match. I have used this one time to
resonate a 50 ft. pole on 160 meters. It also worked fine on 80 meters.
Good Luck, 160 meters is a fun band.

I don't have any mods but would ask, "what do you want to change?" Those who figure out how to mod a radio start with the desire for it to do something different. Then they find a way.

I'd like to enable wideband Rx on my IC-820H as the ability to copy NWS weather would enhance its use in emergencies. I haven't wanted this mod bad enough to hack on my pretty radio.

Hello Dennis,

I understand that Linkcomm had purchased ACC, along with their parts, and
was going to support ACC users. However, now I have been told that they
are not receptive to old ACC users trying to get replacement parts. I
guess all they intended to do was sell there goods whenever an ACC went
belly up.

From: rhl@interaccess.com
Message-ID: <rhl.137.00087AD3@interaccess.com>
Source record: 211644

I have two SAGER 486-33 laptops for sale.
Each is LCD with 120MB (dblspaced to 200+),
1.4mb floppy and 8MB ram.
CPU is true 486-33DX.

Each unit includes two good batteries,
an AC charger, and a leather case.

One unit has an intermittent floppy
and includes a new replacement drive
which hasn't been installed yet.

The distributor, SAGER, has current
parts and appears to be able to
continue support.

Reason for selling: No longer needed.

Price: $750 per unit, FIRM!

Units will be delivered UPS COD,
cash only. No warranty; units are
in working condition and are sold
as-is.

Please respond via e-mail.

2808. Icom 735 vs. Ten Tec rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-07 00:00:00 UTC
From: davev@atkc.COM
Message-ID: <9510070511.AA24487@venus.atkc.com>
Source record: 211646

I am looking to upgrade from the Icom 720 a which has been my HF
rig for the last year or so.

I have been contemplating an Icom 735, but I have heard very good
things about the TenTec line.

Goals:

Very good CW performance - I haven't run voice in about 9 months.
Clean transmitter with no clicks or chirps. Good static
rejection, good filtering for picking them out, etc.

Good rejection of transmitters on nearby frequencies. The Icom
seems to pick up intermod.

Low TVI - I live in an apartment.

Reasonable price. I think the XYL will allow me to swing for the
difference between the 720 A and the 735. (Figuring the 735
costs between $650 and $700.)

Reliability - I won't have a second rig.

Support and service - if it breaks I will need to get it fixed
for a reasonable price. I'll probably be running the rig for
MANY years.

WARC ham band coverage, but not reception on all the shortwave bands.

Has SSB with reasonable receive and transmit quality in case I
need it for emergency net use.

Easy to operate. A basic rig. Doesn't have to do FM, packet,
or any other fancy mode. Doesn't need a lot of bells and
whistles.

Must be able to take a bad SWR, at least long enough to realize
that it is there. In case the two year old yanks the antenna
connections again.

Compact size a plus, but I don't run mobile.

All digital, all solid state.

No memory batteries that will suddenly leave the rig dead.

Personal opinions, dealer inquiries, etc. requested.

From: aruss36461@aol.com (ARuss36461)
Subject: Do you use technology in your club? Please read

I have been asked to research how different amateur radio clubs
make innovative use of technology to communicate to, and with
their members. I have volunteered to research this issue for the
Montgomery Amateur Radio Club in Maryland. My goal is to present
a report to the membership on how others are using packet, the
internet, BBS services, voice mail, and even programmed repeater
announcements to keep the flow of information in front of the
members. I feel strongly that the time has come to consider the

club newsletter as only one vehicle for the dissemination of
information. Your comments are appreciated. If you are a member
of a club, please share with me what your club does, or what you
wish they did do.

When all responses are compiled I will make the total file
available for anyone who wishes to see it.

Thank You.

From: Bernard Seront <seront@seism1.ess.sunysb.edu>
Subject: HW 104 or SB 104 problems.

I have a problem adjusting my HW104: the vfo coil aligment is really very sharp and
not stable (when I hit the vfo case). Any idea?
The receiver board in my hw104 is not the same as the one described in the manual.
I've been told that it could be the same as the sb104. The only indication I found
on the board is this number: 85 1931. I'am looking for any information on how to
align this board, copy of the manual ...

Thank's.

> users.

The actual frequency coverage is pretty limited: just a few KHz outside the
HF bands and *nothing* on 2-meters (i.e., 144-148 only). Mine arrived this
week. The RF section is not so hot on 2-meters, so don't throw away your VHF
radio. But for the package size, I got exactly what I expected.

From: ab910@lafn.org (M. Davies)
Subject: ICOM IC-706 HF mod here.

This is the 50Mhz and down mod. I myself need the above 50 mod.

All those alergic to surface mount quit now.

The 706 has five diodes on the main board (just to the right of the
orange ribbon cable connection and to the left of part R-198)
in a row, unmarked. The one you need to remove is D-59, second from the
left (with the speaker side up and tuning knob facing you.) in that left
to right row.
Caution: removing this diode might disable further mod's (unless you
can remove it whole and reuse it.) and WILL void the warranty.
Mail me any further mod's you find.

This mod. came from a trusted dealer in LA.
I have not done it yet myself.

Good luck.
M. Davies

From: thooker@psl.nmsu.edu (Tracy Hooker)
Subject: TS850S/AT + ACCESS FOR SALE

Hi everyone,

I posted this rig last week, and had a great response.
However, nobody purchased the radio! So, I must have
the price too high. I am also now willing to seperate
the components:

TS850S/AT: The basic radio with the automatic antenna
tuner. Comes with two optional filters, the 500Hz
CW and the 1.8KHz (i think) SSB filter. In excellent
condition, with box and manual. Asking $1325

Kenwood IF232C: RS232 interface for above radio. However,
I dont have the book on this. Asking $60

Kenwood SP31external speaker, with passive filters built in
No box or manual. Asking $50

Kenwood PS430 external power supply. Asking $100

What I did to price these accessories is take the current HRO price
and divide by 2. The TS850 price from HRO is over $1800 with those

filters, so guessed at what a fair market price would be.

One OM asked for just the filters, so if somebody wanted the radio
without filters, I would be willing to sell individually.

All offers considered.

Thanks,
Tracy

First I want to say I am sorry that this has nothing
to do with the topic of this group. You may see this
message in other newsgroups, the reason is I am subscribed
to those too so please don't flame me. I have been posting
and reading to this group for a while. I just wanted to
let you people out know there is a way to get Cable TV for
FREE. I recieve this letter in the mail from a friend
that had told me it works. I gave this to one of my friends
and he had free cable in his house within 20 mins. I have not
tried this method yet but may soon try if my cable goes up in
price. If anyone would like a copy send the following to the
address below.

Address Envelope to:

FreeStuff
9393 N. 90th St.
Suite 102-289
Scottsdale, AZ 85258

Enclose in the envelope:

Send...

$1.00 U.S MONEY *** NO COINS *** NO CHECKS ***
inside a sheet of carbon paper or construction paper,
and send a *self-addressed*,*stamped* envelope to the
address above.

Thanxs,
Just think if you pay 30$ + a month. 1$ will save
you 359 + dollars a year.

2811. Power Supply for HTX-202

Sorry I can't help with your problem but in regards to the service I hear Groton Electronics in Groton Conn. (508-448-3322) is an excellent repair outfit. A friend recently had his TS-930 returned from Kenwood saying parts were not available and that the rig could not be fixed. The folks at Groton fixed it in 1.5 hrs. I have another friend in FLA. who got the EXACT same story on her 930. We're going to ship it up north and see what happens.

Good luck. 73

ag001@lafn.org (Abraham Stavsky) wrote:

>Any problem of using a 13v dc power supply putting out 10.4w

That power supply puts out 800 mA, which is not enough to power the -202 on its high power setting (needs 1.1 A), but it should work for the low-power setting, which needs only 460 mA, according to the owner's manual.

BTW, Amps = Watts / Volts (at least with DC). This was on the Tech test, I thought, but I could be mistaken. Anyway, that's where the 800 mA comes from.

2817. TS-450AT Memory Access

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-08 00:00:00 UTC
From: mccarthy@srv1.freenet.calgary.ab.ca
Message-ID: <457vrn$1d7k@ds2.acs.ucalgary.ca>
Source record: 211558

Is it possible to access a memory channel directly on the TS-450AT? Let's say you are tuned in on memory channel 5 and you wish to go to memory channel 30. Can you go there directly or do you have to step through every channel on the way? Direct access is possible on the TS-440 and on many hand helds. This feature is important to amateurs with poor or no sight. Thanks and 73

2818. Any comments on ICOM IC740 ?

From: s118462@korppi.cs.tut.fi
Message-ID: <458lgr$cii@peippo.cs.tut.fi>
Source record: 211559

Hi,
I would like to hear any comments on this IC740 hf-rig, both positive and negative facts about this model are very welcome. Also if you have some nice modifications to this rig, please post them to me.
I'm interrested in all data about this rig because I'm thinking to bay such a rig. The rig seems to be in very good condition (no scratches, original manual still icluded ...) and it is equiped with CW-filter.
And the price is also quite reasonable in our local scale.
Bottom line is: would YOU by it?

Mikko, OH8JMX

>
>Thinking of getting an FT-51R to replace my lost Alinco DJ-580T.
>The think I like most about the 51R is the phone-style separate microphone
>and speaker, for full duplex use.

I just bought a ft 51r and the software. It's my first rig, so I'm not
completely fimaliar with the purposes of all the features. From what I
can tell its a great radio.

All that is included with the software is a disk and the serial cable. IT
works with a few other yaseu radios, I don't it works with any you
mentioned.
This is how it works. Open the program, set your memories, offsets, pls,
tx power, battery saver, etc etc. Then you download the info to the
radio. Everything appears on the radio. It's not an active controll in
that you use the computer to change freqs while your talking.

Hope that helps a little

Scott

>information from personal experience good or bad. I would be using it
>for a base rig with ocassional in feild mobile opperation.
>
>Thanks in advance
>
>Richard Lubash

Ihave had a ft900/AT for about one year and use it mostly mobile. In my jeep with an Outbacker antenna I have found the performance to be very good and I have no complaints.

Last April I took it with me to the virgin Islands and used it on a sailboat for a couple of weeks. Worked great.

I think it would make a good base station as well as mobile. For base use you might want to upgrade the filter to the crystal filter instead of the ceramic but it shouldwork very well.

Your Right!

I guess I'm one of those NO clue hams.

When I was 18 I had a clue, and a life.

Now, after degrees, and too many years of actually
"doing" what I thought I had a clue about...
I discover I have not enough clue.

I guess I'll spend the rest of my life getting clue,
but that's O.K. It's IMHO better than NOT knowing
I DIDN'T HAVE A CLUE!

Oh yes, this ham radio hobby is NOT just about technology.

Tom

Huh?

Did I do that? (Damn PC's!)

Sorry Bernard, There is a Heath HW-101 and a SB-102 and a SB-104.

The HW-101 had bad microphonics, hammer the case, get the VFO to
move... No real good fixes, so heath re-designed the VFO!

: today to call Alinco and see what they say but I suspect thay will either
: tell me to send it in for $$$ or that it is not possible. What ever,
: I'll post it here.

I did call Alinco and was told that the radio couldn't rx aircraft. They also told me that they wouldn't tell me if it could! They have basically taken the position that the radios are what they are, and won't advertise that they can be modified to even rx out of band. They also said they won't modify or discuss modifications due to the FCC.

Subject: Anyone modified FT-757GX?

I am using my FT-757GX a lot for AM signal reception in medium waves (500-1700 kHz) but I have found that the performance of the receiver section is quite poor. I have modified the preamplifier to operate under 1500 kHz to add sensitivity. To make receiver more selective I have added an extra AM filter (Murata 2.7 kHz) to the 455 kHz IF section but in both cases the results are not satisfactory.

So has anyone tried to enhance the same features and with what results?

And one more thing. I am using an external keypad to operate the FT4s VFO but in some cases I would like to use also the VFO knob itself. But it is so SLOW! How to speed up the VFO with less revolutions?

Hello there....
If the software you are after is the same one I am thinking of then the software has been bought under license by YAESU and can now be obtained through your local Yaesu dealer. It is the ADMS-1 package for the FT-51. If you have any difficulty in getting this. We can ship from here in the UK.

Not only is use with transverters a good reason, apparently any US
amateur station (including Novice or Tech?) can have reason to use ham
gear on 5.1675 MHz, depending on location (97.401d).

Icom IC-706

General comments:

Very compact; particularly with the detachable front panel, should be
no problem for anyone finding a space for it at home or mobile/portable.
I didnt weigh it, but it seems light enough to put in a backpack for some
interesting mountain top operating!
The front panel layout is quite good, except for the RIT button. The tuning
knob feels smooth, and can be adjusted for a friction feel, or a reasonable
amount of flywheel action.
The manual seems pretty comprehensive, and there is a quick reference card. It
appears just about every option can be set up with its own default, based
on band/mode etc., so it should not be necessary to spend much time messing
around in the menus. I must point out though that _I_ have not played much with
this yet. The rig is certainly usable 'out of the box'.
There are a bunch of connections on the back panel, for connecting a tuner,
rtty stuff, computer interface, etc. No low level rf out for a transverter,
however.

On the air:

On receive, the rig seems fairly 'quiet'. Even with the pre-amp on, the audio
gain has to be set well advanced to make much noise out of the speaker. On 6m,
connecting the antenna gives a fair increase in noise (I live in quite a noisy
environment), and the W7US beacon, abt 100miles away, sounded as good as it
does on my regular rig (HB txvtr > IC735). I couldn't find any other weak
signals to try it on.

I didn't find any birdies on 6 or 2 apart from my usual 'friends'; in fact some
were missing; artifacts of the previous transverter scheme I guess. I was
afraid I would get some inter-mod from local commercial services, but it seems
to do a good job of eliminating that.

To my NW, I get some fairly bad power-line crud, which my 735 noise blanker removes completely. The NB in the 706 didn't seem to do as good a job. The S-meter reading dropped, but I could still hear the QRN. However, I didn't have a signal to listen to through the noise, so it may be good enough in practice. I have not yet had a chance to try it in the car, so I don't know how well it will handle automobile ignition noise.

Working local stations on 6 and 2, the immediate reaction was that the internal speaker was not up to the job. It was really quite unpleasant to listen to; very tinny. Plugging in an external speaker solved that problem. I didn't try with headphones, as I don't yet have an adaptor for the mini phone jack. I'm sure they would sound really good. Again, I had the impression that there wasn't really enough audio 'umph' available. In a noisy mobile environment, an external amp would probably be needed. Tuning was really smooth, particularly set for 10Hz steps. No noticeable steps/bumps/clicks etc, as I have heard on some rigs.

Reports on the transmitted audio quality were uniformly favorable. (note: this is on sideband, I didn't bother with AM or FM). The compressor had a noticeable effect, but the effectiveness of that will have to wait for some noise level paths.

On the bench:

Test gear used: HP8591A Spectrum Analyzer, HP608D generator, assorted Weinschel attenuators, HP3400A true rms voltmeter, various wideband directional couplers, calibrated with the 8591.
I do not have a noise figure meter; to check sensitivity I found the level at which I got a 3dB increase in noise with the audio level set as low as would give a stable reading on the 3400. The assumption is that at that level, the internal AGC would not have kicked in. The noise figure is then the signal level, in dBm, minus -140.3 (for a 2300Hz assumed bandwidth). (I think I've got that right; I won't be offended if someone corrects me, though!).
If someone local has a noise meter they could loan me, I'll run some more detailed checks.

Receiver: All the following were with the internal preamp ON.

In band:

freq, MHz threshold dBm noise figure,db
28.600 -134.5 5.8
50.125 -136.1 4.2
144.200 -136.2 4.1
148.000 -137.0 3.3

Out of band: (to nearest dB)

60.0 -132 8
70.0 -134 6
80.0 -132 8
90.0 -133 7
100.0 -133 7
120.0 -130 10

130.0 -113 27
140.0 -104 36
150.0 -103 37
160.0 -96 44
180.0 -78 62
190.0 -75 65

This looks really interesting in graphical form! The sensitivity is quite uniform up to around 120MHz, then drops off fairly steeply. The exception, of course, is in the 2m band. In fact, there is a very noticeable change in the background noise _immediately_ you tune outside the 144-148 band limits. I suspect that a different front-end filter or extra pre-amp is automatically switched in. The manual does not include a schematic, (unusual for Icom), so I can't verify this.
I did not have time to run the checks below 50MHz, but the background noise and qrn level sounded similar to that at 50.125, so I dont expect any major reduction in sensitivity in this range.

Transmitter:

50.125 Power max 89.6W min 2.5W
144.200 max 9.4W min 0.5W

Power control operated smoothly in between these limits.
Even though it seems a little low, 89W is within 0.5dB of the rated 100W, and that is within the measuring error of my setup.

No spurii could be found less than 60dB down from the desired output.

Some specific questions sent by e-mail:

How bad is the intermod?
No apparent problem from out-of-band signals. Haven't had a chance to try with strong in-band local stations.

How well does the noise blanker work?
Not tested on ignition qrn. Not as effective on powerline spikes as the IC735.

How does it do receiving WBFM?
Using a regular dipole in the shack, pulls in the stations better than my A/V receiver. Audio sounds good, though not up to hi-fi standards, on an external (small Radio Shack) speaker. Absolutely crappy on the internal speaker.

Is power output up to spec?
See above.

How warm does it get just receiving?
Case temp rises less than 10F above ambient after several hours of operation.

How difficult are menus to navigate whilst driving?
Haven't tried this, and wouldn't recommend it. Set what you need in the
memories ahead of time, and you shouldn't need to mess with this.

Does it truly have poor receive above 160MHz?
See above. I would expect it to be pretty poor above 130MHz, except for 2m.

Reception on the broadcast band 530-1600 khz?
Only listened at night with my HF beam as an antenna. Sounded pretty nasty,
but about the same as my IC735. I expect it would be fine during the day,
and/or with a proper antenna.

On wide fm on the TV sound signals at about 190 mhz?
With a 3foot piece of wire as an antenna, I could hear nothing up there
except some pops and crashes. Based on the sensitivity tests, above, I
would expect it to be pretty poor.
Is there just one coax connector on the back for all bands hf, 6 and 2,
or is there a separate output for each of the vhf bands?
One socket (SO-239) is for all bands < 60MHz. The other SO-239 is for >60MHz.

What kind of cable do you need to seperate the front panel for remote
operation- do you need to buy theirs or can U build it when you need it with
parts on hand?
It's a non-standard connection arrangement (spring-loaded pins) so I expect
their cable is the only way to go. Trouble is, its not available yet. 8-(

Does it come with a mobile mounting bracket and a mic?
Mic, yes; bracket, no.

Does it have a CTCSS encoder built in, or is that an option (for PL tone
activated 10/6/2m repeaters)?
Yes it does, and also 1750Hz for the Eu repeaters.

How much you have to give for it?
$1299 + tax

Is it all mode on all bands?
I didn't see any restrictions per band.

I have a Kenwood TH-22AT, and it is a very nice radio, but it has a slightly loose frontend... (This because I get bombarded with intermod from pager trasmitters on the 152/157MHz band in my area)...

If you are serious about repeaters and such, I would advise getting a dual-bander.... I wish I would of bought a dual, since I am usually indoors, and UHF penetrates better thru brick and such...

>of the Month"..Anyone else out there getting the same problems
>from Kenwood?
>
>Steve, WA2NHZ

Just thought I'd toss my 2 cents in here too. I have a Kenwood TS-440 that also had the exact same problem with the pll. I don't think there is a real solution to the "rig of the month" problem. For me, the TS-440 was my first and will most likely be my last Kenwood. Given that, I will soon be in the market for another HF xcver within the next year. The problem I face is what to buy. The choices are now Yeasu, Icom, Ten-Tec, and JRC. After reading many posts here on Interenet, I am left somewhat perplexed as to just which radio I'll buy next. I just don't see to many posts raving about what a great radio 'brand x" is. I realize that most posts are going to be negative, but I just don't get the "warm fuzzy" feeling about any particular brand. However, based on my experiance with Kenwood, that brand is off the list. The current thinking is maybe a Ten-tec. I know, they aren't problem free either, but at least their service is

alleged to be good. Plus, they're made in the U.S. Must count for something.

BTW, I know 3 other guys who bought the '440 around the same time I did (late in the run) and all 3 of them has experianced the EXACT same problem. One guy got lucky, UPS lost the radio on the way to kenwood for it's 3rd repair. He now has a 450!

Here in Canada we have a new license class. It allows you to walk into a class on a Saturday morning without even knowing what a ham is, not to mention any theory, and walk out later that day with a call sign. The No Clue / No Code is here...pretty scary stuff.

2830. Kenwood TS-870 first impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-08 00:00:00 UTC
From: zamo@teleport.com
Message-ID: <4594bj$7bb@maureen.teleport.com>
Source record: 211571

I became interested in the TS-870 from the announcement in this newsgroup. I stopped by our local Ham Radio Outlet to see if they had a brochure and was surprised to find they had several rigs in stock. Kenwood has done a better job than ICOM recently in introducing new products. I'm still waiting to try out the ICOM 706 that I saw at a hamfest last June. I was impressed how well Kenwood has integrated the DSP controls into the unit. I don't have an outboard DSP box and was interested to see how well it was implemented. Since my birthday was only a few days away, my wife thought it would make a nice present ;)

Although the TS-870 has a similar RF sections as the TS-850 and the dimensions are identical, the front panel has a new layout. I had no problem understanding the control functions and the cold-cathode display has lots of color coded mode indicators. The numeric entry pad has 2 X 5 rows instead of the more familiar 3 X 3 + 1 arrangement, a minor drawback.

The package seems solid but I haven't opened the case yet. I would rather see machine screws holding the cabinet together instead of sheet metal screws. I like the carrying handle and feet on the sides for portable operation. The 12V supply makes battery operation feasible, but the rig is a bit large for mobile operation. The interal speaker is fine for portable operation, and the matching PS-52 power supply is easy to carry.

The "multimeter" functions are great! The 30 segment bargraph acts instantaneously and the top segment has a 2 second peak hold feature, very convenient. S-meter/power, filter shape, and ALC/compression/SWR functions are displayed simultaneously. The IF DSP filter controls are convenient, and adjust Lo/Hi cutoff frequency for SSB/AM/FM, and Width/Shift for CW. Filter ranges for SSB are Lo: 0-1000 Hz, Hi: 1.4-6 KHz, and for CW are Width: 50-1000 Hz, Shift: 400-1000 Hz. The filter setting appears on the display when the knob is turned. The filter shape factor varies from 2.25 at 200 Hz bandwidth to 1.43 at 2.3 KHz bandwidth. The DSP IF center frequency is 11.3 KHz. The DSP system uses dual 16 bit A/D converters and dual Motorola 56002 chips running at 40 MHz clock frequency.

The receiver seems very quiet compared to my ICOM 735. Perhaps that is due to the quiet synthesizer design from the TS-850. DX signals seem to pop out the background noise with clarity. A strong SSB signal without speech processing sounds like an AM broadcast station using 6 KHz bandwidth! The AGC attack is instantaneous, and the release time is continuously variable. The AGC implemented in the DSP system and operates very smoothly.

The IF DSP automatic notch filter can track and null a single carrier without desensitizing the receiver. The noise reduction and beat cancel functions operate in the audio stage and selection is mutually exclusive. Noise reduction mode and parameters are menu selectable. The "Beat Cancel" mode tracks and cancels multiple heterodynes. The "Line Enhancer" mode tailors the audio response around the signal frequency characteristics, recommended for SSB operation. The "Speech Processing/Auto Correlation" mode uses a statistical adaptive filter recommended for CW operation. I haven't spent much time with the noise reduction modes. In SSB, the background noise is reduced at the expense of some audio distortion.

The DSP is used to generate the trasmit signal. The audio equalizer can tailor the response in the low, middle, and high frequency bands. The speech processor level and compression is adjustable as in the TS-850. There is a monitor to listen to the transmit audio. I don't know if the speech processor operates in the audio or IF system.

The TS-870 has a standard serial port operating up to 57.6 Kbaud. Windows software is included, but I haven't tried it yet. I plan to used it for logging signal strengths of HF becon stations.

I paid $2700 for the TS-870 and $280 for the PS-52. This is my first Kenwood rig, and I'm impressed. If you all have more questions, I would be happy to give you my candid opinions.

73,

Jim

Hi There,

To all subscribers issue 3/1995 of VHF Communications magazine will be shipped Monday Oct. 9th. We apologise for the slight delay, but as they say in the best circles, this was due to circumstances beyond our control - in fact our printing house had a major machine failure.

To anyone who is not a subscriber to the magazine, it is a publication for the Radio Amateur Worldwide, especially covering VHF, UHF and Microwaves. 95% of the contents are construction projects with a full backup with PCB's and/or kits. The worldwide subscription rate is UKP15.00 by cheque or UKP15.75 by credit card or bank transfer.

To whet your appetite the contents of the latest issue include:

A Frequency Counter with Harmonic Mixing
200mW GaAsFET Amplifier for 24 GHz
Part-6 of a DIY Receiver for GPS and GLONASS Satellites
Linear Signal Rectification

For further information please send me an email.

Regards ... Mike

Ten-Tec doesn't have a $800.00 or under radio that is multi-band, do they?

I know the Scout radio is about $600.00 and then you play the module game.

I owned a 735 for a year or so - nice radio but bet you'd like a used 751A a lot better. Hotter receiver - higher average SSB - built-in keyer is standard - and not much larger. Lots should be for sale as folks migrate to DSP based newer rigs.

Over the years I have aquired many easy and hard to find HAM & SCANNER mods. Below is a small listing of some of the items I have mods for, just because it isn't listed doesn't mean that I don't have a mod. Please e-mail me at BucherJ@aol.com with the Make and Model of the item you are looking for and I will send back what type of modifications we have for that item. If you decided that you need this mod then all I ask for is a small fee of $5 for the information.

Note: These mods are furnished for informational purposes only, any changes that you make to your equipment may void the warranty and be illegal.

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-08 00:00:00 UTC
From: bucherj@aol.com
Message-ID: <45808j$2ev@newsbf02.news.aol.com>
Source record: 211578

The Mods I currently have for your equipment is:

KENWOOD
TM742
1..RX 18Mhz to 54Mhz
2..TX 26Mhz to 45Mhz
3..RX 40Mhz to 90Mhz
4..TX 46Mhz to 76Mhz
5..TX 136Mhz to 174Mhz
6..RX 215Mhz to 260Mhz
7..TX 215Mhz to 235Mhz
8..TX 420Mhz to 450Mhz
9..RX/TX 1100Mhz to 1400Mhz

If you wish to order the mods please send $5 (check or money order) for each radio model (1 radio= $5, 2 radio's = $10, etc.) to:

J.Bucher
c/o Star
535 Pearl Ave #5
Loves Park, IL 61111

Please specify if you want your mods faxed, e-mailed, or sent via the postal service when ordering. It is possible that when we send this information additional mods for that radio will be available, if so we will send them along also.

Please included an e-mail address if I have any questions about your order.

I find this very encouraging news. I've been considering the IC-706
for my Jeep, but was concerned that it might just be a very expensive
scanner (with all the attendant problems that brings) rather than a
solid amateur radio. From the above, it appears that Icom may have
been listening to those of us crying in the wilderness and has started
making amateur radios again, and not glorified scanners. Radio Shack makes
those, and much cheaper. I want a radio that doesn't howl at the moon
every time I pass near a paging transmitter. (Personally, I don't know
why Icom even bothered to make the display show digits outside the
amateur bands, but I guess it's a necessary marketing gimmick. As
long as those out-of-band signals can't get through the radio, it's
still fine by me.)

2852. Help w/ Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-09 00:00:00 UTC
From: tgoins@accessone.com
Message-ID: <tgoins.14.0111F19F@accessone.com>
Source record: 211507

I am in need of some help diagnosing a problem with my Pyramid PS-50 power supply. It is an adjustable 12-15 volt supply capable of about 50 amps. It's about 4 years old.

Here's the problem. When it's first turned on (after sitting for several hours) the voltage will rise to the proper level then immediately (10 - 15 seconds) start to drop off. It will eventually platuea at about 7 or 8 volts. If you turn it off and then cycle it back on immediately then the voltage never does rise to a normal level, it just starts low and stays low.

Here's what I have tried as fixes. It has a 732 voltage regulator chip and I have replaced it. No change. I also changed the 2N3055 regulating transistor which seems to somehow control the other six 2N3771 power transistors. No change.

I am at loss about what to do next. Could it possibly be a filter capacitor (five of them 10,000uf / 25 v)?? Or maybe the transformer? Or maybe one of the six (2N3771) power transistors? All of the parts are available through Digi-K ey and I am willing to replace them myself, but I don't want to have to take the shotgun approach and replace everything until it starts working. I'd prefer to have a more educated guess.

Thanks in advance for your help.

Todd Goins (NOMZT)
Seattle

<stuff deleted>
: This was the standard battery pack supplied with the DJ-120T 2-meter HT

Another Alinco DJ-120 owner... amazing!
I have had the same battery problems you mentioned above. My battery pack suddenly and completely died about a year ago (actually WHILE I was buying the radio). The pack showed zero voltage across the terminals and on the ohm scale it showed infinite resistance.
The seller and I got it working again by cracking open the case and replacing the batteries with aftermarket batteries. Two bundles of three batteries each, soldered together the way the original ones came out. We did not mess with or understand the board in the battery pack. (just stared at it in unison :) I charge the batteries with the original AC/DC converter and can use the radio for several hours on a charge.
As long as we are on the subject of batteries for the DJ 120, if you happen to find an aftermarket supplier of 12volt replacement batteries, please let me know.

good luck...

Thanks everyone for the responses to my email. For anyone else who reads this post and wants to know. ACC was bought out by LinkComm and is reachable at linkcomm@netins.net and they also have an FTP site at ftp.netins.net:\\showcase\linkcomm\acc that has the binary files for the RC-85, RC-850, and RC-96. Including information about the EEPROM and the DALLAS chip. This information will shorten the time our repeater is off the air - Thanks.

I highly praise Icom for not having any sensitivity out of the 2 meter
band. I am so plagued by intermod that it makes any contesting on
that band useless. I would think most urban users would also like
this as the unit makes a very usefull mobile radio. Now we can
finally commute and not have to say "sorry can you repeat that I am
going through intermod alley". I am eagerly awaiting Christmas when I
can hopefully get mine.

> ACC went belly up.

Actually we are trying to help, but our hands are tied. Many of the chips used in ACC controllers were discontinued years ago. We have obtained DVR codecs, PALs, and voice synthesizers. We are making the latest version EPROM files available on our ftp site free of charge (did you ever get a free update before?). We have not been able to get EPROMs, so we have ordered circuit boards that are supposed to allow the use of newer, available EPROMs in the RC-96 and possibly the RC-85. When we get those circuit boards, we should be able to distribute the latest software update and provide replacements for the EPROMs. We are also working to obtain some other chips, but we don't yet know which ones we will be able to get. If anyone has information about where replacement chips can be obtained, we will be glad to pass it along. Because so many chips have been discontinued, keeping ACC controllers running will eventually be a losing battle, despite our best efforts. If you have information or questions about any of this, please email me.

2870. MFJ Multicom software help needed

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-09 00:00:00 UTC
From: willhelm@ix.netcom.com
Message-ID: <45bh1d$69j@ixnews5.ix.netcom.com>
Source record: 211525

I purchased a late production run MFJ 1278 Multimode controller this
last weekend at the local ham swapmeet. It included an original version
(original disks and original manual) of the MFJ Multicom software.
However, upon installation i find out that the main program file
"Multicom.exe" is corrupt and wont run properly. The disks also
contained another program called MFJCOM and it seems to do ok. However
i sure would like to find someone who can help with the Multicom
problem. If you have a copy of this package please contact me.
Thanks....Bill in Las Vegas, Nv.

From: turner@safety.ics.uci.edu
Message-ID: <45biub$9gg@safety.ics.uci.edu>
Source record: 211527

In <9510070511.AA24487@venus.atkc.com> davev@atkc.COM (Dave van De Kerk) writes:

>I have been contemplating an Icom 735, but I have heard very good
>things about the TenTec line.

>Goals:

>Very good CW performance - I haven't run voice in about 9 months.

Both of the brands will give you this. I have used the 735 and most
every Ten Tec made. The Ten Tec "feel" on CW is pretty nice, but
the 735 is too.

>Good rejection of transmitters on nearby frequencies. The Icom
>seems to pick up intermod.

The Ten Tec's will mostly blow the Icom away on this point. I am
speaking of the Corsair I and II, they both have VERY good front
ends that will handle all sorts of problems with ease. NOT that the
Icom is bad at it...the 735 is fine in this department, but the
Corsairs are amazing.

>Low TVI - I live in an apartment.

No differences I suspect.

>Reasonable price. I think the XYL will allow me to swing for the

Depends on the model of Ten Tec. The Corsair I with all the extras
can be $600 or more. The Corsair II is more. You can find bargains
at times.

>Reliability - I won't have a second rig.

I believe either one is fine. The Ten Tec's are easier to self service.

>Support and service - if it breaks I will need to get it fixed

Both are very good.

>WARC ham band coverage, but not reception on all the shortwave bands.

735 has general coverage, most Ten Tec rigs do not.

>Has SSB with reasonable receive and transmit quality in case I
>need it for emergency net use.

The Ten Tec will draw less current under the majority of circumstances,
depending on the model. They have less bells and whistles to draw current.

>Easy to operate. A basic rig. Doesn't have to do FM, packet,

This is the hallmark of the last few generations of Ten Tec.

>Must be able to take a bad SWR, at least long enough to realize

The 735 will do fine, it will just fold back the power output automatically.
If the SWR is bad, you put out very little or no power. The Ten Tec
rigs will generally still put out power into a bad SWR, but you must
quick-fuse or get a fast breaker on the power supply to protect the
finals if they draw too much current. The Tec Tec power supplies take
care of this.

>Compact size a plus, but I don't run mobile.

Most Ten Tec rigs are not as small as the 735. You might look around
to find the Delta II, it is probably comparable. I have not used
a Delta II. The Corsair is much larger than the 735, but not heavy.

>All digital, all solid state.

What is "all digital"? Digital display? Or do you want PLL circuitry?
The Corsairs use PTO's instead of PLL, and that results in a "quiet"
receiver. They have digital frequency counters for displays.

>No memory batteries that will suddenly leave the rig dead.

The Corsairs have no memory, no problem here. I do not know whether
a dead battery can "kill" the 735, I think not.

Hey, you are in Santa Ana? I live in Irvine, on campus at UCI. Try
the swap nets on 7240 on the weekends and you can get lots of local
info.

Source record: 211532

To those who were complaining about the 706 being deaf above
2 meters...
Is it okay BELOW 2 meters ?

In order to receive from 500 KHz to 200 MHz continuous, the front-end
would have to be pretty wide open...without a more expensive tracking
filter system frequency controlled by the microprocessor, the receiver
would be susceptible to intermod from strong signals on adjacent
frequencies.
I'm wondering if there was a particular problem with intermod on
2 meters during developement of the 706 and so maybe they utilized a
filter for 2 meters that inadvertantly attenuates the frequencies above.
Perhaps this filter is kicked in for 2 meter use by the microprocessor
but it doesn't take the filter out of line above 2m !? A mod to manually
disable the filter might yield better reception above 2m.

Anyone have a schematic of the 706 that they could share with me ?

****
Yeah! with Kenwoods latest track record telling people their radios
can't be fixed cause they no longer have parts..(newer radios)..I'd
be cautious not to invest too much in a radio that may soon only
be used as a planter...

My mother-in-law has some shortwave equipment for which she has no use. She isn't looking to sell it, but she's considering donating it to a ham-radio teacher and would like to know how much it's worth. Any feedback on fair market value of the following would be appreciated. Since I won't describe the condition of the pieces in detail it would be easier if you can give three price estimates based on condition: Like-New (N); Typical wear and tear (T); Distressed (D). In fact, most of the equipment has been very well cared for. Feel free to fill in the blanks and return this to me. I'll summarize if there's interest.

Thank you very much.

Could you please tell me more about the unit??

How much was it new?
How much do you want to sell it for?

2884. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-09 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <45bbhi$29s@mrnews.mro.dec.com>
Source record: 211590
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band?
Easy: re-crystal, tweak a few tuning screws
Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design of some circuits, you must pay

authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every other week for a while, until the FAQ
is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

-Tom R. N1OOQ randolph@est.enet.dec.com

2885. Any mods for IC-575 or IC-275?

Can anyone provide names or locations for Ham shops in the greater Houston area (50 mile radius, or so). I will be in the area soon and will have some time to kill (scattered over several days).

I would really like to browse shops with a decent display of equipment, old or new. Any information will be greatly appreciated.

Also, any tips on active 2m/70cm repeaters in the area.

The only full service Ham Shop in Houston is up at Spring and it is called
Houston Amateur Radio Supply. The phone number is 713-355-7373.

As for 70 cm repeaters, I use 442.75, pl 103.5.

Enjoy,

Lewis

2889. Setting up IC706 for FM repeaters

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-09 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfDG63Gn.JsD@netcom.com>
Source record: 211595

Today I decided to program some 2M repeater frequencies into my IC706.

I discovered that there are two ways: tedious and horrible. The tedious way involves separately programming the receive and transmit frequencies (along with PL) into the "A" and "B" VFOs respectively, then writing the whole mess to a memory. The horrible way involves changing the FM offset frequency (which is a power-on configuration, so you have to go thru the power on menu access procedure). The catch here is if you have one repeater on a +600 split, then you want to load in a repeater with a -600 split, you have to go thru the change to the split memory (again involving the power-on menu!).

Needless to say, Icom gives you the "horrible" version in the manual.

Save yourself some time and use the "tedious" method.

Wow, well, not new right now. But neither does Icom make the 735 anymore,
so I assumed he meant on the used market. Ten Tec then has at least
8 models of radios that would compete with the 735 for under $800.

>751A a lot better. Hotter receiver - higher average SSB - built-in keyer

Not a bad suggestion at all. However, it just knots me up inside when
we sell the American ham rigs short. So I jumped in :-) .

Kenwood is doing this on a wide scale with all of their radios..
I know personally of people with 440's 940's and 850's that have
gotten the same story...guess they want to sell new radios and
they can't support the large inventory of parts since they are
the "rig of the month" club...I'm off their customer list...

Date: 1995-10-09 00:00:00 UTC
From: "Jeff Fischer"@thefishnet.com
Message-ID: <8B2B322.00740006ED.uuout@thefishnet.com>
Source record: 211599

I am looking for your comments, or thoughts on one of two radios.
The Alinco DJ-580t or the DJ-582T which is the newer version of it.
I have been loyal Kenwood through the years, but their service has
gotten to be something to be desired in the last 5 or so years, and am
going to go on to another brand. Also they seem to be getting too many
bells and whistles on them, and I am looking for a basic Dual band
handheld with Encode/Decode CTCSS at a fair price.
I have a few of the mods for the 580 and what it is capable of doing,
does anyone have anything they would like to share on the DJ-582T, and
what is capable with it. I think they have knocked the 800 receive out
of it unless I am wrong.
Any info would be appreciated.

Message-ID: <45bq0g$6m4@homer.alpha.net>
Source record: 211600

I just bought one two weeks ago and installed it under my front seat with an Outbacker Perth antenna. The FT-900 is ABSOLUTELY the finest mobile rig I've ever used!! I've worked about 20 countries on all continents so far, and the signal reports are all exceptional. The noise blanker is exceptional, too! It would be kinda' a drag, however, for me to remove the unit from under the seat and move it inside, since I had to remove the seat entirely to install it!

I would agree w/Clarence Peckham who recommended to upgrade the filter to the crystal filter instead of the ceramic for home use.

Have fun!!

2895. HUSTLER MULTI-ANTENNA TO MAST COUPLER

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-09 00:00:00 UTC
From: thooker@psl.nmsu.edu
Message-ID: <thooker.55.000CB59B@psl.nmsu.edu>
Source record: 211601

Hi everyone,
I am looking for a manufacturer of a certain type of antenna coupler. It allows several hustler resonators to be attached to the top of the hustler mast. I am familiar with the one that HRO sells, it is basically a trianglur piece of aluminum with holes in the corners, and the corners bent down at an angle. That is not the kind I want.

The kind I am looking for is manufactured from a solid stainless steel rod, which makes a cylinder about 1 1/4" diameter, and about 2 1/2" long. It is drilled and tapped axialy, and at 4 places around the perimeter. It is much sturdier than the piece a flat aluminum stock.

If anyone has some info on this, please let me know.

Thanks
Tracy

From: David A Allen <davida>
Message-ID: <45euh1$54f@nonews.col.hp.com>
Source record: 211454

I'd like to add subaudible tone squelch (CTCSS) to a Santec ST200ET 2m rig (circa. 1983). Has anyone added CTCSS on this rig or one of similar vintage?

(Note: This project is for a blind ham friend of mine. The ST200ET has thumbwheel switches for setting the frequency, which really works well for his needs. The local repeaters are starting to require sub-audible tones to combat noise problems, which is what's driving the need here.)

Any help would be appreciated!

2899. ICOM Parts

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-10 00:00:00 UTC
From: Michael Stricker <stricker@ll.mit.edu>
Message-ID: <45e9nc$etp@llnews.ll.mit.edu>
Source record: 211455

I wanted to convey to the ham radio community the recent experience I had ordering an ICOM part for my IC02AT. The HT had a "dead" RF power module so I contacted ICOM USA regarding procuring a replacement part. I was told it would be $29.64 (which it was) plus shipping, less than $5.00 (actually $3.78). When I received the part, I was billed an additional $5.00 for "handling". When I questioned ICOM regarding this charge, they told me that was standard.

I guess I'm stupid because I still don't understand this charge. If the component costs $34.64, they should charge me that and not tack on an additional charge. If this additional charge is for extraordinary "handling", the least they could have done was to wrap it in an anti-static bag. I guess I'm very dissapointed with any company that stoops to these kind of charges to make an additional 16% (or so).

I just wanted to warn all of the public about this practice and hope that they learned something from my bad experience with ICOM. Does anyone know if Kenwood, Yaesu, or Alinco does this?

The best way to get "Light" coverage for the 742A is to strike it forcefully with and axe. (Sorry couldn't resist). But this change certainly qualifies as a "mod".

Since it uses the same RF units as the 741A, the changes are probably similar. Among other things, you have to add an antenna which must be connected inside the RF unit. I've heard (unconfirmed by trying it -- I'm not much on "mods") that even then its relatively deaf. Sounds like it would be simpler, more effective, and potentially less destructive to buy a scanner .....

The fact that the 706 can not hear outside of the 2m ham band is a feature not a problem. I already have a $50 scanner that works better than the $500 ham rigs that that use a choke and a capacitor in front of the highest gain transistor they can find and call it a front end. Yea ICOM, I hope other manufactors get the message. I will never again buy a vhf radio with a wide open front end. I want to listen to the ham bands not intermod or the police or boring cell phone calls.

>$1299 sculpture !

There probably is; it'd involve soldering a length of copper wire around a well designed front end full of filters and highly linear RF preamps. Then you'll have the same quality front-end as a $130 scanner instead of a $1300 radio. Really.

You say you already have a PRO2006; try comparing its weak-signal sensitivity *within* the ham band to the Icom, especially when that 1kW pager you have nearby is going off. Dial up some very weak signal on the '706 (eg some conversation on a distant repeater, at barely S1) and listen for 10 minutes or so. Then, switch the antenna over to the PRO2006 to see how it fares over the same length of time.

The idea of listening for awhile is to give the pagers, passing cabbies and cop cars a chance to toss some RF at you. If you really want to get nasty, try keying up an HT tuned about 500kHz away or so from the monitored signal and see which radio desenses and which doesn't. Try it at different power levels and offsets.

If you don't find the difference worth the money, then you should indeed go and replace that rig with a cheaper model (ie one with a cheapo front end). Just don't expect much success at things like FM DXing, terrestrial SSB or satellites with it...

M. Davies (ab910@lafn.org) wrote:

: I bought my 706 thinking it, like other Icom radios, did out of band
: receive and transmit with acceptable spec's. WRONG!!!

: My 706, like others on the net, is deaf as a post beyond the 2m ham band.
: 162.550 weather is loud and clear on my RS 2006 scanner with the built in
: whip. The 706 hears nothing there even when connected to my discone up 25
: feet! On 154.830, LAPD Tac, my 2006 again can hear the action loud and
: clear, sometimes without ANY antenna......the 706 hears nothing.

Oh my god! You mean Icom had the nerve to sell a radio that doesn't
double as an expensive, poorly implemented scanner? Jeez, I bet they
took out all the intermod susceptability too! Dang it to hell anyway!

When are these so-called ham radio manufacturers going to learn that we
all want the following features on our radios:

1) Receive 0Hz to 999.999THz. (So we can listen to cops and tow trucks)
2) Transmit 0Hz to 999.999THz (so we can "play cop" as well as listen to them)
3) Video games on the display LCD (Who needs a Gameboy anyway?)
4) 100,000 memories (Just gotta put that Timbukto repeater freq. somewhere!)
5) Tiny, tinny speaker. (Who actually listens to these things?)
6) 250 buttons (Waddya mean the MIDI port is optional?)
7) Cheezy construction (So we have an excuse to buy next month's model.)

From: cdorn@gpu.srv.ualberta.ca
Message-ID: <45cga3$97k@pulp.ucs.ualberta.ca>
Source record: 211537

Hello,
I currently own Drake B twins and an R8, and have enjoyed Drake stuff. I am putting the feelers out for a TR7. I am interested in opinions on the TR7. I have heard that the early serial numbers had a problem with the driver board, but the later ones were okay. I also understand that the rigs were not WARC capable off the line, but that the transmit inhibitor can be disabled fairly easily for wider TX coverage. I have also heard that the TR7 filters and noiseblanker were optional, but that the TR7A had the blanker and other options built in. Can anyone clarify these issues for me? How much should I spend on a nice unit? Have any of you had real problems with the rig?
Thanks,
Chris VE6RDC

From: eric@sierra.net
Message-ID: <45cs60$d9c@jobes.sierra.net>
Source record: 211539

Hi Jonathon,

The Mod is as follows:

{1} Turn off and unplug FT-2500M from power supply/battery.

{2} Remove top cover {two screws}.

{3} Find and cut the "green loop" of wire.

{4} Make sure insulate the ends of the wires.

{5} Replace the cover and attach radio to power.

{6} Turn on radio!

That's it. It will open up the rig from 120mHz to 180mHz Rx and Tx.

<rest deleted>

I had a similar problem with my icom w2a and aftermarket telescoping (fairly rigid) antenna. After replacing the connector on my radio I came up with a fix that actually makes things BETTER. I use two 90 degree angle connectors. That allows me to position the antenna with two degrees of freedom and move the disconnect point away from the radio to an easily replaced right angle connector. When hung on my belt, the antenna is usually positioned to hang beside the radio, not sticking up into my armpit. When laying down on a table, I can position the antenna to stand vertically for best reception. It's a win-win situation.

You can get them at Radio Shack for $3.99 each (part number 278-116).

Hi Bill,

I got a little worried when I read the one page technical lecture explaining, QUITE INCORRECTLY, why the keyer could never work with a transistor in the output. I was hoping you'd just send your keyer in to be fixed, hi.

Glad it was something so simple!

I'm highly suspicious of the so-called IF DSP on the 870. Interesting
that the "IF" DSP processing is done at 11.3 kHz; it sounds like perhaps
they did it this way so that they could advertise "IF" DSP. Since the
870 has no provisions for optional crystal filters at the higher IFs,
it seems that you essentially end up with no benefits a good audio DSP
can't provide, and you don't get the benefits of proper IF filtering either.
I'll be interested in what the reviews have to say about the 870, but
right now I have no plans to sell my 850/DSP-59+ combo.

73,
Jeff, KC1MK

2922. IC-706 SEMANTICS of advertising

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-10 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <45efqv$i4n@cville-srv.wam.umd.edu>
Source record: 211551

I have a problem here. The 706 (no, I don't own one)
looks great. They even advertise it as being able
to receive up to 200 MHz!

Seems to me this in untrue. I had an IC-2SAT that
would "receive" after modification from 0.00 to
1300.00 MHz without gaps! Of course, outside of
the range of 138-174 MHz, it was completely useless.

But note that it was sold being able to receive the
138-174 MHz range, and it DID it out of the box
with reasonable sensitivity! I wouldn't advertise
it as an R-1 2m rig, even though it would TUNE
the same range that an R-1 would.

Just because a radio TUNES a frequency range does
not mean it RECEIVES that range. Sorry, but the
numbers posted on the 706's performance do not indi-
cate that it can RECEIVE up to 200 MHz.

Like my Alinco DR-1200T hearing the 380 and 860 MHz
bands...sure, the display says something, but you
sure won't hear what's there...

When The Collins Radio Company was acquired by Rockwell International a lot of Collins memorabilia was trashed. I was working for Collins at that time and managed to salvage some items as I was contemplating writing a history of the company. This never came to anything and most of the material I had collected has been placed elsewhere. However I do have left a very interesting set of B&W photos from the very early days in Cedar Rapids. Included is a photo of what I believe to be Arthur Collins Senior.
I am not trying to sell these but merely trying to find somebody or some institution who would appreciate and look after these artifacts.
There are 11 photos in all 19x16 inches very clear and in perfect condition.
Ideas to dmedley@indirect.com

: these issues for me? How much should I spend on a nice unit? Have any of
: you had real problems with the rig?

I have a tr7 and I think it's great. The only problem I have with it is
that I can't get a 6khz am filter for it, so I have to use another
receiver for short wave listening. IR&C makes ssb and cw filters for
it, but no AM filter. Anyone have an AM filter for sale or know where
to get one?

The receiver is very sensitive. I have an MFJ 20m qrp rig that was very
carefully tuned for optimum sensitivity. The tr7 "hears" better even
when my antenna switch is set to the MFJ (about 40db loss to the tr7).

When I got my rig, it did not tune below 14.100 and the 40m sensitivity
was poor. The rig had sat in a basement for years and some of the
contacts were corroded. The radio has internal circuit cards, like an
IBM PC. I opened it up and reseated each card and cleaned an internal
coax connection coming off the frequency counter board. Now it works
fine.

In ssb mode, it sounds pleasant and I have gotten compliments on the
audio.

The transmit coverage can be opened up to the warc bands by adding an
aux-7 board. The board needs special ics (13 common cathode diodes)
with pins cut. The aux-7 instructions and the service manual tell you
what pins to cut. I had no trouble finding an aux-7, you may as the
have not been made for years. The diodes ics are about US$3.00 each.

I paid US$400 for my used tr7 and US$250 for a brand new, in box, ps7 power
supply. I have seen the radios go for as high as us$650 each, and complete
stations from as low as US$600 to US$1200 depending upon condition, and
what accessories were included.

The service manual is very large and has several three page wide schematics.
If you don't get one with the radio, pay the $70 for a copy. Do not try to

get another ham to copy one for you.

Since the Soviet over the horizon radar disappeared, I have not much call for a noise blanker, but you may.

Note that the radio has no memories, computer control, fm, automatic antenna tuner, etc. If you want a "video game" with similar performance, I suggest that you get a Kenwood ts850sat. If you don't need or want all that stuff, get the tr7.

73,

Geoff.

> Any info would be appreciated.
>
> Jeff KB4MKL
> jeff.fischer@thefishnet.com

Jeff... I have one of each... the 582 does NOT have the 800 mhz receive modification possibility, but after hearing what is up there I am thinking that is not a big deal

If you are old (like me) the letters on the keypad are a little bigger on the 582... both keypads are not for fat fingers... the displays are the same, and require reading glasses to see anything other than the numerals.

The 580T has a better backlit display... more even lighting and not as many dark patches.

However, the 580T is a little less sensitive to intermod... primariliy because it seems to be less sensitive altogether... both HT's receive repeaters beyond the range of the 5 watt transmitters, so for the money I wish I had bought a second 580T... it IS nice having interchangeable batteries, rubber ducks, etc.

I use the radio shack speaker/mic (about 25 bucks) which seems to perform better and sounds less tinny both ways than the Alinco spkr/mic.

Mel... KJ9C

my opinions... my company has their own, and we disagree a lot

: any other 300W tuners people would recommend? Thanks for the help!

: John, N3VLL

It would help if you would tell us something more than 300 watts.
What frequency band(s)? What sort of antenna? Some hams use tuners
for short mobile whips; others use them for big wire arrays.

Will you be using coax or balanced line between the antenna and tuner?
Although many tuners have a couple ferrite cores to act like a balun
on the tuner output, I don't think that is a very good idea. Baluns work
best if used with used with a well defined impedance like 50 ohms in and out,
or 300 in and 75 out. If a balun is used for impedances far removed
from the nominal, it probalby won't work too well. It might not act
like a balun, or it might be lossy or both.

If you are planning to use balance line to the antenna, look for one
of the vintage Johnson Matchboxes.

2935. Re: ICOM IC-2340H - what is modified freq range?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: "Erik Finskas (csb1_95)" <finskase@ee.port.ac.uk>
Message-ID: <45g30b$lqn@hawk.ee.port.ac.uk>
Source record: 211473

It is possible to modify the freq. range, but I don't remember how to do it. Basically, at the processor board (between the display unit and the radio units) there are normal size diodes, one of them is for wide RX, second for cross-band repeater enable and third is just there, find no documentation about it. The radio will receive after modification 108-174, 320-480 and 800-950 IF there is the 900MHz front-end card installed. The front-end card is on the speaker side of the radio, and it is standing middle of the board. If it is, you still have one problem, you need a extra antenna connector for 900MHz. I used a SMA connector (very small) and fitted it to one of the free metal plates used to cover places for cable connections (there should be one free)

The sensitivity for AM airband, 108-136MHZ is not so wonderful and they should do something with the AM detection, it sounds like FM.
136-174 is very sensitive due the wide front end, which will be connected online when outside 2m ham band 144-146.
320-479 is also sensitive, there is also another wide front end for out band reception and narrow one for 70cm.
800-950 is a dream, it is just as sensitive as it should be, at cellular band it does not hear any interference from powerful base stations nearby, just the channel you are listening. Only problem is, that IF filters are mainly for 25kHz channel step, and cellular phones use mainly 12,5kHz, so if there are two conversations going on on neighbour channel, they may interfere a bit each other.

Thanks for the tip on ICOM Mike. I also have an IC02AT with no xmit power. I was just about to ship it to ICOM for repair. I put the HT on a Bird, keyed the transmitter and saw no power indication on the meter; but the LCD shows a full scale indication. I tried another meter with the same results. I thought the LCD measured the RF at the antenna connector??? Also, I can key up a repeater 5 miles away. Have any ideas. Anyway, thanks for the tip.

Have you considered putting in a capacitive impedence matching network
off the AM Mode selector switch to bypass the present 3 Khz Filter.
Given the strength of Broadcast AM , if it is a problem, a simple
two pole descrete crystal filter network around the the current
filter may be a solution.. Drake is still in business. They aren't
in Miamisburgh but I believe they are in the Columbus, Ohio area.

Anyone remember the CX Signal One HF transciever? It was one of the premier HF solid state rigs, digital, with loads of bells and whistles. Vintage was about 1978 or 1979, about the time Kenwood introduced the ts-120 and ts-180, icom released the 701, Drake had the R5 and R7A, etc.

Looking for history about the CX Signal One, origins, if anyone uses 'em today, opinions, etc. Reason? I found an old QST and never heard about this rig other than what I read in the adds then and again now.

Also..did Atlas ever release their 350 HF rig? Just curious...the QST was advertising the 215 and 210X as being the latest and greatest of mobile operation...cool, huh? And that was only 15 yrs ago.

thanks,
Joe

Source record: 211479

Subject: Another GMRS Question - Durability?

>>If anyone who owns a Maxon 210+3 can e-mail me any information on how
>>durable they are, I would be very grateful.

I tested one last year before they were publicly available. There are
over 40 of them in use daily out here in SoCalifornia that I am aware of
- in use by REACT Team Members. I have two myself.

They are NOT built as rugged as, say, the Icom U-16. But they're 1/3
the cost of the Icom, too.

I originally had doubts that the spring steel used for the belt clip
would withstand everyday use - I was wrong. All is well in that
department.

Changing batteries all the time - and no problems in that area, either.

The panel lights are, well, inadequate...but that isn't unusual.

What else can I say? It's the best deal going for serious GMRS
communications work.

Clint Bradford

2942. Land Mobile Radio FAQ you

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.7275.7583.0NFBB4A1@woodybbs.com>
Source record: 211480

Subject: Land Mobile Radio FAQ needs your input!

>>The Land Mobile Radio FAQ is now under way... I need your support!

Prior to the 1990s, new GMRS radios were usually available only from local two-way radio vendors, or directly from the radio manufacturers themselves. When the radios were purchased, the manufacturer or vendor would install the appropriate crystals (or program the transceiver) for the specific one or two channels or channel pairs authorized on the purchaser's license.

In the last four years, GMRS radios have become increasingly available through national mail-order outlets, and through local consumers' electronics stores. Most of the radios available from these sources are pre-programmed or pre-crystaled for operation only on specific channels. Some models can be reprogrammed or recrystaled for other GMRS channels, but other models cannot be so changed.

Some confusion has developed as to which channels are installed or available in the different models of radios available from these mail-order sources and from these local stores. The advertisements for these radios sometimes don't identify the specific channels, or sometimes even identify the WRONG channels!

There is also some confusion as to what the capabilities and technical specifications are for these radios. Many models available from mail-order sources are NOT SUITABLE for GMRS repeater use, for example. (Repeaters are a special kind of GMRS base station, usually mounted on a tall building or tower, which repeat the signals of GMRS mobile units. From their advantageous mounting height, repeaters can substantially extend the communications range of the mobile units communicating through them.)

However, one recently introduced model (Maxon's GMRS 210+3, described later) IS capable of repeater operation. The new model offers certain highly desireable, user-friendly capabilities that will most certainly have a dramatic impact on the GMRS market. (Almost every other handheld radio is now out of date and/or over priced!) ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ ~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

The reference to "CTCSS" below refers to the kind of subaudible tone control ("continuous tone-controlled squelch system") needed to activate a repeater. For a GMRS radio to be able to communicate through a local repeater, it must be able both to transmit on the repeater INPUT frequency (in the 467 MHz band), AND to impose a CTCSS code onto that signal. Different repeaters use different CTCSS codes, and you need to adjust or to reprogram the code for the particular repeater which you wish to use.

Many of the radios described below do NOT have a CTCSS capability, and some cannot also transmit on the 467 MHz primary channels used for the repeater INPUT signals. In either such case, that model is not capable of operating through a GMRS repeater.

==========

Maxon model GMRS 210+3:

This model, introduced in late December 1994, has capabilities unlike ANY other currently available GMRS transceiver. Some of these features are highly prized by GMRS personal users.

10-channel positions:
Channels 1 through 7: the seven non-repeater "interstitial" frequencies (462 MHz only).
Channel 8: the 675 channel, user selectable from the front panel for EITHER repeater or direct communications.
Channels 9 and 10: dealer programmable for any 2 of the other 7 PRIMARY channels, also front-panel selectable for either repeater or direct communications.
With the front-panel repeater offset selection for channel positions 8 through 10, this could actually be considered to be a THIRTEEN-channel radio!

CTCSS tone-code selection:

FRONT-PANEL USER SELECTABLE for ANY of the approximately three dozen common tones, plus another dozen extended and "in-between" tones, a total of fifty. The user can quickly change the tone code on any channel. The capability to change the code no longer requires access to internal programming or the use of a special external programmer. It's all accessible on the front panel.
~~~~~~~~~~~
This is the first UHF transceiver since the mid 1970's designed exclusively for the GMRS with a repeater capability. It is also the first GMRS radio EVER with user-selectable multiple CTCSS codes.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Transmitter output power:

Depending on the battery or power source, from 2 to 5 watts output, with a low-power (1 watt) front-panel selection.

Price: $299 suggested retail. However, this radio is widely advertised by mail-order vendors, with a sale price in the $195 to $200 range.

Other: Comes with a 16-hour charger (a desktop rapid-charger will be available later), cigarette lighter plug (for 5-watt vehicular

Subject: Land Mobile Radio FAQ needs your input!

(Continued from previous message)

operation), nylon handstrap, and licensing instructions.

Availability: Call MAXON SYSTEMS (1-800-922-9083) to request the name
and address of your nearest Maxon dealer. These radios
are also available from certain mail-order vendors. Two
whom we know of in particular are: Sports-Comm Distributing
in OR (1-800-573-2256) and Communications Electronics in MI
(1-800-USA-SCAN).

Normally we don't HYPE a particular model or manufacturer. This Maxon
model GMRS 210+3 represents such a SIGNIFICANT ENHANCEMENT over other
GMRS radios (ANY model, ANY manufacturer) that we wish to give it the
maximum possible exposure. Maxon is to be commended for finally intro-
ducing a GMRS radio model that incorporates features which personal users
have long sought but which have been unavailable on any prior radio.
(The other models described below pale by comparison. They're OBSOLETE!)

==========

RADIO SHACK Model PRS 100 (also manufactured by Maxon):

Channel 1: TX 462.6375 MHz, RX 462.6375 MHz
Channel 2: TX 462.7125 MHz, RX 462.7125 MHz

CTCSS: None available, and apparently no space for being added.
Other: 1-watt hand-held radio. 16-hour charger (only). Application
Form (FCC 574) and instructions included, although many
corrections are necessary. Not reprogrammable for other
channels, nor for a repeater split. $260 apiece. We've heard
of some local RS stores discounting this units down to as low
as $150. (With the introduction of the Maxon 210+3, discussed
above, the price of the PRS may drop substantially!)

NOTE: We understand that this model has been discontinued as of February
1995, replaced by the Model PRS 101 (see below). Local Radio Shack
stores are reported as selling the PRS 100 for about $180 as a
"clearance" item.

==========

RADIO SHACK Model PRS 101:

Channels 1 through 7: TX/RX on the seven GMRS "interstitial" frequencies
(462.5625, 462.5875, 462.6125, 462.6375, 462.6625,

462.6875 and 462.7125 MHz). Not reprogrammable.
Channel 8: 462.675 MHz. Not reprogrammable.
Channels 9 and 10: 462.550 MHz. Both are independently programmable
by the user (by removing the back cover) to any of
the seven GMRS primary frequencies in the 462 MHz
band (other than 462.675 MHz).

CTCSS: None available, and apparently no space for being added.
Other: Maximum 2-watt (reduceable to 0.9 watt) hand-held radio. 16-hour
charger (only). Application Form (FCC 574) and text instructions
(but NO sample) included, although certain corrections and
enhancements should instead be followed. Not reprogrammable for
any other GMRS or non-GMRS channel. $220 apiece.

NOTE: This model was introduced in early February 1995, and apparently
replaces the 2-channel Model PRS-100. (However, with the intro-
duction and wide availability of the Maxon 210+3, discussed above,
the price of the non-repeater-capable PRS 101 should be expected
to drop substantially!)

==========

Uniden Model GMR 100:

Channel 1: TX 462.550 MHz, RX 462.550 MHz
Channel 2: TX 462.725 MHz, RX 462.725 MHz
Channel 3: TX 462.5875 MHz, RX 462.5875 MHz
Channel 4: TX 462.6125 MHz, RX 462.6125 MHz
Channel 5: TX 462.6375 MHz, RX 462.6375 MHz
Channel 6: TX 462.675 MHz, RX 462.675 MHz ("Emergency")
Channel 7: TX 462.6625 MHz, RX 462.6625 MHz
Channel 8: TX 462.6875 MHz, RX 462.6875 MHz

CTCSS: None available, apparently no space for being added.
Other: 1-watt hand-held radio. 16-hour charger (only). FCC Form 574
included, but apparently no further instructions. Units are not
reprogrammable for other channels, nor for a repeater split.
No CTCSS capability. Price: From $160 up.

CAUTION: These Uniden radios are sometimes ERRONEOUSLY being advertised as
being capable of operation on all eight of the GMRS primary channels. NOT
TRUE! They operate ONLY on 550, 675 and 725 of the primary channels, plus
on five of the seven interstitials (as shown above). Furthermore, despite
one channel being labeled as "Emergency," these radios are NOT capable of

(Continued from previous message)

using repeaters on the national 675 emergency channel.

==========

Maxon (model designation unknown)

Channel 1: TX 462.575 MHz, RX 462.575 MHz
Channel 2: (individually crystalled)
For instance, one mail order house installs the 625
channel in this second (non-repeater) position. This
may vary from one source to another, but the 625 frequency
appears to be the most common for the second channel.

CTCSS: None provided, but may be available "after market."
Other: 1-watt hand-held radio. 16-hour charger (only).
Unknown if FCC Form 574 or instructions included.
Price: as low as $110 (mail order) and up.

==========

Maxon Model GMRS 2+2:

Channel 1: TX 462.5625, RX 462.5625
Channel 2: TX 462.675, RX 462.675

CTCSS: Available from Maxon ($50)
Other: 2-watt hand-held radio. Drop-in charger ($17) and speaker/mic
($10) also available. Unknown if FCC Form 574 or instructions
included. Crystals are soldered in, but might be changeable(?).
Antenna adapter (to BNC), service manual, and other options
available directly from Maxon. (Prices cited here are from a
discounting mail-order outlet. Maxon's prices are somewhat higher.)
Price: $99 (from a recent advertisement, may have been on
a "close out" sale).

==========

Maxon Model CP-0520:

Channel 1: TX and RX: per your specification (but included in price)
Channels 2 through 4: TX and RX per your specification

CTCSS: Available ($64 for encode/decode)
Other: 5-watt hand-held radio (switchable to 1 watt?). Crystals for the
second through fourth channels available at $30/channel. Includes

16-hour charger, rapid charger available as an upgrade ($34).
Price: $209.75 from PageCom (from a recent mass mailing which they
made to GMRS licensees).

==========

Maxon Model SP-2850:

10-channel (dealer programmable) hand-held radio.

CTCSS: (Believed included with the basic price, but we're not sure.)
Other: 5-watt hand-held radio, programmable for any ten combinations of
frequencies (TX and RX) and CTCSS. Includes battery, desktop
charger, flexible antenna, belt clip, 1-year warrantee. Price:
$389.75 from PageCom (from a recent mass mailing which they made
to GMRS licensees).

==========

Maxon Model SM-4450M:

16-channel (dealer programmable) vehicular radio.

CTCSS: (Believed included with the basic price, but we're not sure.)
Other: 40-watt mobile (vehicular-mount) radio, programmable for any 16
combinations of frequencies (TX and RX) and CTCSS. Probably
includes hand microphone, power cord. Price: $329 (or $459 for
the base station model, SM-4450B) from PageCom (from a recent mass
mailing which they made to GMRS licensees).

==========
==========

Please provide us with additional information or corrections. Thanks.

NOTE:
~~~~
The radios described above are not the only radios available or suitable
for GMRS use. Virtually ALL manufacturers (including Motorola, General
Electric, Relm [Regency], Uniden, Maxon, Icom, etc.) of commercial-grade
UHF-FM transceivers can supply models which are suitable for GMRS use. Most
models of UHF-FM transceivers which are FCC "type accepted" for use in the

(Continued from previous message)

various "Part 90" business, industrial and local government radio services are also type accepted for use in the GMRS (unless they exceed 50 watts output power, the maximum permissible in the GMRS).

To find more information about local sources of UHF-FM transceivers suitable for GMRS use, you can also contact your local sales outlets for the manufacturers listed above, or your local vendors of two-way radios to the business-use community. Some (but ONLY some!) vendors are knowledgeable about the GMRS, although many have misconceptions about how it can be used. Locally purchased radios are likely to be more expensive than mail-order radios of comparable capabilities, but you will usually have the assurance that you will be able to obtain local service and repair on the units. (ALL UHF transceivers will need occasional repair and tune-up!)

More information about finding sources of GMRS equipment are available in publications from the PRSG. See Bulletin P3 for a summary of current publi-cations. Two of particular interest to those seeking to purchase GMRS radios are:

L.2.a Choosing Sources for GMRS Equipment; Observations and Background. June 1988, 8 pages. $3.00.

L.3.a How to Choose a Hand-Held GMRS Radio. June 1988, 16 pages. $6.00. (This one publication alone could save you a hundred dollars or more on your next GMRS purchase! Be an INTELLIGENT CONSUMER.)

PRSG Newsletter SUBSCRIBERS:

From the MAIN menu, J (JOIN) the 4SALE Conference for more information about GMRS radios available from mail order sources, including more detailed information (and MAILING ADDRESSES for mail-order outlets) about availability and suitability for GMRS use.

Non-SUBSCRIBERS:

Hey, do you need MORE INCENTIVE TO SUBSCRIBE? There's great equipment out there, and we research its availability and suitability for GMRS use, and then report these findings in the 4SALE Conference on this BBS. Access to the 4SALE Conference (and to the other special interest conferences) and to GMRS licensing database are just two of the ENHANCEMENTS and BENEFITS which we provide to our newsletter subscribers. (See Bulletins P2 and P3 for more information on subscribing. ~~~~~~~~~~~~~~~~~~ ~~~~ ~~~~~~~~~~~~~~~~~~~~~~~~~

2946. KENWOOD TS-870S - How do you like it?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: kham@halcyon.com
Message-ID: <kham-1110952117050001@blv-pm0-ip26.halcyon.com>
Source record: 211484

I've read about and played with the 870 at the local ham store but have yet to speak to anyone who has purchased one and is using it. How do you like it? How does it compare to rigs you have used? Does the DSP filter work as effectivly on SSB as is is claimed to?

Or if you're contemplating purchasing one: What do you like about it?

Thanks,

Dave, AB7FV

2947. Re: eto 91 beta amplifier ?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: Joe <joentam@transend.com.tw>
Message-ID: <45gia4$e58@keelung.transend.com.tw>
Source record: 211485

While living in Tokyo a couple years ago, a JA friend of mine happened to be in the USA during the Dayton Hamvention. He purchased one of the Alpha 91B's from Mr. Etherhorn (sp?) during the hamfest and brought it back to JA with him. I was fortunate enough to test drive the amp during the WPX contest in JA and again during the CQWW CW contest (operating from Macao, XX9).

The amplifier is a very good value. Aside from getting the Alpha brand name (which means superb resale value in your investment), the amp was extremely easy to tune, forgiving into slightly high VSWR, and could loaf along at 1.5KW or more for the entire contest. Best of all, we could drive the amp to better than 1.5KW with less than 65 watts of input. It makes the entire shack stay "cool". Fan noise was minimal, and I've no doubt that this amplifier has the same KEYDOWN rating as other ETO Amps.

The amp is actually manufactured in Bulgaria, but many of the amplifier components are Russian built (to my surprise). The tubes are by Eimac, so they are of the highest quality. Construction of the cabinet, case, knobs, switches, etc is of very good quality, and the 91B has adequate plate, grid, and Ic monitoring.

Of course, the amp is NOT an 87A, or even a 77DX, but it is a very nice amplifier. I've used several amps before, including the Henry 5K and 3K classic, L7, L4B, SB-220, AL-1500, TL-922A, and a few others. Dollar for dollar, I believe the L7 (Drake) or the Alpha 91B are your best bets. Of course, nothing really beats an ETO Alpha 87A, but we're talking an entirely different price range. For the unit my friend purchased, the 91B has an *optional* qsk board, which is excellent if you enjoy higher speed cw contesting. I dont know if this is now standard...at the time he bought it, ETO was still having some production issues...perhaps it is included now. I recommend it highly, as utilizing QSK makes a big difference. Of course, at no time during keydown did the bird wattmeter move off of the 1.5KW mark for the entire contest. It was dependable.

The transformer uses Hypersil, and the unit should be run from 220 to 240 VAC at 15 amps. In JA, the normal voltage is 100VAC, so the most we could get from the JA line is 200VAC. The amp ran fine, but had to change the transformer taps.

I have not tired the Alpha 89, but understand that it is even better than the 91B, while the 91B is best for "value". Hope this helps...

Best of luck, 73, and Shalom,

2948. FT-23R - No RF output

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: moyers@cti-pet.com
Message-ID: <moyers.15.05BE78B7@cti-pet.com>
Source record: 211486

I have an FT-23R HT that has been sitting for a while. When I fired it up the other day, I thought the antenna had failed. I could only hit one very local repeater (2 miles line-of-sight). Last night I hooked the rig to a wattmeter and output appears to be less than 10 mW.

Has anyone had a similar failure. I find it hard to believe that the output devices have failed, but with this radio... anything goes!

Ideas?

Cliff, you may have hit the nail on the head ... with poor performance on
both TX and RX, the first thing I would check is that the BNC antenna
connector is still firmly soldered to the PC board - this is a common
failure on many handhelds. Look for a loose BNC connector ... this is
usually the culprit (and requires a special spanner wrench to -correctly-
tighten down.

Good luck, and very 73!

2953. ANTENNA - Comet CH-32 Miracle Baby

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-11 00:00:00 UTC
From: killian@aztec.asu.edu
Message-ID: <45h9t0$778@news.asu.edu>
Source record: 211491

Does anyone have any experience with this antenna? I am interested in replacing the rubber duck on a Yaesu FT11r with the Comet CH-32. I wouldn't mind a slight degradation in performance, however, the radio only puts out 1.5 watts normally so a major degradation would not be acceptable for me.

Any info would be appreciated.

Thanks
Mike - KC7JGC

The BC-348J, N, and Q models have two IF stages. The BC-348E, M, P, C, K,
L, R, and H have three.

If you don't buy a manual from Fair Radio or somewhere simiilar, let me
know. My schematic is in an old surplus conversion manual and I'm not
sure how a copy will turn out. I'll give it a try if you don't find an
alternate source though.

The RS counter, while a fine unit for the bench, is purposely "deaf",
so you have to be quite close for it to read the frequency of a transmitter.
This is good when you're working in a high RF environment, but doesn't
make it a very useful "sniffer". For that purpose, there are purpose
built units, see ads in the ham rags.

>of the vintage Johnson Matchboxes.

There are two of these for sale right now by Hams on the Net. Both are the 275 watt version and the asking price is $100 or less. The power rating is based on AM, so they're good for peak carrier about four times that number, in addition to Johnson's safety margin.

The only caveat to these is that they don't cover 160M, and based on recent tests in QST, won't tune 30M. Considering their other qualities though, it might be worth the risk to try and change the taps so they'll tune 30M, assuming you want that band.

From what I can see, there is no other commercially available tuner suitable for non-resonant antennas fed with balanced line.

>Anyway, thanks for the tip.

Most likely the power amp is out. The VCO in the 02AT runs on the transmiter frequency. Not unusal for a radio to trip good repeaters on very little power. The handling fee is basically a
packaging fee and such. Many companies make small charges for packaging as they must purchase
the materials for packaging, and these do not come cheap any more. Usually you only hear from
people in hobbys complaining, generally they are on a small buget for equipment, most business persons
do not bat an eye over handling fees. I think you will find other companies service the Amateur Radio
hobby also charging some sort of fee for handling / packaging call it what you like, Or maybe they just
hide it in the pricing of the equipment or materials.

From: GCKH81A@prodigy.com
Message-ID: <45k037$bgo@usenetz1.news.prodigy.com>
Source record: 211413

This question is probably way at the bottom of the expertise of this news group, but couldn't find a specific news group for discussion and advise on hand held radios.

Here is the situation and question. My wife and I will be driving two cars almost 3000 miles from Florida to Utah next week. I wanted a reasonably priced pair of hand held radios to communicate while we were traveling. It seems to have come down to this:

1) Motorola SP-10 is available in a 1 watt VHF - one channel for $190
2) Motorola SP-10 also available in a 2 watt UHF - one channel for $225
Both Motorolas can be upgraded with a "private line" for $33.00
3) Raytheon Apelco model 501 is a marine VHS radio with 5 watts switchable to 1 watt (power saver) and has mutiple channels including weather channels, scanning and it is priced at $225

It seems like the Raytheon is the best choice, due to features, power and price. I don't need the marine channels, but I figure they are as good as others for my wife and I to communicate with each other. Maybe clearer than business channels in inland locations.

Any advise?? Any flaws in my reasoning?? It seems like every sales person has a different, and contradictory, opinion.

Message-ID: <45hv13$ck2@news.cerf.net>
Source record: 211416

I have a Kenwood TS-430 with very poor AM audio quality. The audio ouput is very bassy, making it very difficult to understand spoken words, even on powerful AM broadcast frequencies. In fact, it is often easier to understand when the radio is tuned to SSB or AM with the receiver tuned 1 kHz on either side of center frequency. On the other hand, my ICOM sounds fine on the same freqs.

Does anyone know of a way to fix this? Reviewing the operation and service manuals gave no indication of how to fix the problem. Any suggestions???

First of all,

Thanks Erik for posting a response to this question.. I have seen many requests about mods for the IC-2340H radio, but very few responses.. Hopefully there are many other lurkers out there who will benefit from this discussion.

"Erik Finskas (csb1_95)" <finskase@ee.port.ac.uk> wrote:
>It is possible to modify the freq. range, but I don't remember how to do it.

From the information that I have gathered so far when the W1 jumper on the processor board (between the display unit and the main body of the radio) is cut, this enables receiving signals from 118 Mhz to 174 Mhz, and also a bit above and below the 440 Mhz range.

Next, about 1 inch below this W1 jumper on the same board is a set of small surface mount diodes arranged like this :

(note: numbering is my own.. not silk screened on the board)

```
_
W1 |_|

_ _ _ _
1|_| 2|_| 3|_| 4|_| <-- (these diodes are very small)

_ _ _ _
5|_| 6|_| 7|_| 8|_| <-- (these diodes are a little larger)
```

On my radio, 7 and 8 are not there at all. I have been told that the removal of diodes 5 and 6 will enable extened transmit. (thanks harry)

(back to the original post)....

>Basically, at the processor board (between the display unit and the radio
>units) there are normal size diodes, one of them is for wide RX, second for
>cross-band repeater enable and third is just there, find no documentation about

Erik, for the sake of our studio audience, could you verify which diodes control which functions???

>it. The radio will receive after modification 108-174, 320-480 and 800-950 IF
>there is the 900MHz front-end card installed. The front-end card is on the
>speaker side of the radio, and it is standing middle of the board. If it is,
>you still have one problem, you need a extra antenna connector for 900MHz. I
>used a SMA connector (very small) and fitted it to one of the free metal plates
>used to cover places for cable connections (there should be one free)

If the 900 Mhz front-end card is in place, where should a connection of an additional antenna be?? somewhere on this little card? hopefully obvious. Also,

if this card is not present in the radio, where can one be obtained?? from ICOM?

>

Thanks again Erik for _FINALLY_ someone starting to shed some real light as to what is going on with this radio...sometimes getting information here is like pulling teeth... Or maybe pulling teeth might be less painful!!!

Buy and install the optional AM filter. I don't remember the part #,
but it will make it sound almost HI FI.

(I know that wa7mtf has a 430 with the filter, maybe you can get the
part # from him)

Hello,

The name here is Steve VE9SHM.. A couple of months ago I saw a posting about using a sound card to decode DTMF trons. In the posting there was a file that would use a soundcard to decipher these tones. I am not sure if it was in real time or if they had to be recorded on tape.

If you know of such a program, please let me know how I might get a copy of it

73 and thasnks for the help

Don't bother sending this joker any of your hard earned money....
The 215 MHz to 260 MHz mod only applies if you have the 220 module
( I think you said you only had the 2M and 70cm modules) and
needless to say, the mods are available for free on many radio related
BBS' and FTP sites.

Greetings all. I am trying to find info on both the NMEA-0183
spec and the interface used by the 'Magellan Trailblazer' GPS reciever.
Acording to what little data I have the 6 pin plug is dc 11 - 13vDC with 4
pins for data. trans data, rec data, signal ground and ???. Also
what standard does this unit use? ttl?, psuedo ttl?, or rs232 like the NMEA
spec calls for? Any info would be great. Thanks

Hi all,
I need the mods for the IC-T22A,can anyone help me on this?
Thanks and 73.

2997. Re: ICOM IC-2340H - what is modified freq range?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-13 00:00:00 UTC
From: Hugh Pepper <pepperh@demo.bb.unisys.com>
Message-ID: <1995Oct13.132400.12385@unislc.slc.unisys.com>
Source record: 211354

In search for the ellusive ICOM IC-2340H modification info!

The saga continues...

After some looking around last night here are some more observations and
and of course questions...

From Erik>...
>It is possible to modify the freq. range, but I don't remember how to do it.
>Basically, at the processor board (between the display unit and the radio
>units) there are normal size diodes, one of them is for wide RX, second for
>cross-band repeater enable and third is just there, find no documentation about
>it. The radio will receive after modification 108-174, 320-480 and 800-950 IF
>there is the 900MHz front-end card installed. The front-end card is on the
>speaker side of the radio, and it is standing middle of the board. If it is,

My questions>...
I opened the radio and see a board 1/2 inch tall by 1 1/2 inches long..
it has the number B4254 silk screened on the back, and a bunch of SMD
commponents on the other side. (I think this is the 900 Mhz front-end
board that you were speaking of??)

It has 16 pins along the bottom side which are soldered into the main board,
and there is a jack J1 which is for a very small coax connector which is now
empty. This is on the bottom of the radio, not the speaker side (The speaker
is on the top of the radio)

There is also a 2 pin jack labled J3 next to this long board. How is this jack
used, if at all??

>you still have one problem, you need a extra antenna connector for 900MHz. I
>used a SMA connector (very small) and fitted it to one of the free metal plates
>used to cover places for cable connections (there should be one free)

On the back of the radio, on the side where the mic cord goes and the regular
coax comes out, there is an unused plate off of the back of the radio. I
assume you used this to get the 900 Mhz coax out after connecting it to J1
internally correct?

>Erik-
>Erik Finskas G/OH2LAK

Thanks for the information, all who contributed.. I think we are getting
somewhere with this yet!!

Hugh -

My advice would be to buy a used Corsair II, IC-735, or similar radio.
The Scout's a bit of a kludge. For the same money, you can find a used
full feature radio. Let someone else pay for the priviledge of breaking
the seal on a cardboard box.

That would be the NCX-1000. Its main claim to fame was 1000 watts PEP (input) in a transceiver box. It was the big brother of the NCX-5.

I've got one. The auto-notcher works, the narrow filters work, the
noise reduction feature doesn't work. At half price, it's Ok, at
full price I'd pass for something better.

Yes. It is an external unit about half the size of the transceiver. It works very nicely, but has no memories; you have to re-tune from scratch every time you change bands.

From: mcinnis@austin.ibm.com
Message-ID: <DGEM5M.L90@austin.ibm.com>
Source record: 211367

Does anyone have opinions, information, malicious, gossip etc. about
the "Vector finder" made by Radio engineers Technitron? Is it a
switched antenna phase shift type system? How does it work when you
get real close to a strong transmitter in a foxhunt? Does it work well, etc.?

I've seen someone advertising an active attenuator for T-hunting. It's of
the "shift everything 1 MHz up in a mixer" type and cost something like
$50. Does anyone know who sells these? Any opinions, advice, etc.?

BTW, has anyone considered making a fox-hunting group? Think there's enough
interest?

I need the pin out configuration to connect a TS-140 to an AT-50. The docs with each of these
conflicts with the other. One says to connect the AT-50 to the Remote onthe back of the TS-140
and the other doc says that it should be connected to ACC3.

Logic has it that if the AMP is connected to Remote yuou cant connect the tuner there too. so I need the pin out of ACC3.

>for me.

Well your on target, a trick stick was a simple 1/4 wave dipole and that
is that. Construction is simple. 468/27.125 = total length.
That makes it 17.25 feet total length. Or about 8' 7 1/2" on a side.
You can use any light weight aluminum. split in the middle by and non
conductor. Like Plastic (PVC PIPE), or a wood block, almost anything.
All you'll need to do is feed each side of the dipole with one of the
two conductors from the coax.

>a Korean company called Maxon.

Built by Maxon is right; designed by ICOM is wrong. ICOM and Radio
Shack both deny that the design of the -202 is in any way related to
any ICOM model, which I tend to believe (if it _were_ ICOM-designed,
I'm sure Radio Shack would advertise that fact prominently).

The -202 does take some ICOM-compatible accessories,
though--speaker/mikes and batteries come to mind.

I would put a brick on my HT only if I had a more directional antenna IMHO. (I built a 4 element quad out of the ARRL Antenna book and it's been a lot of fun!) More power *could* bring up repeaters you don't want to bring up if you use an omnidirectional antenna.

I am posting this for a friend who is currently between email addresses. [Since I have the same radio purchased on the same date - I too am quite interested in the answers.] Email replies would be more convenient for me but she and I would welcome insights in any form.

- - - - - - - - - - - -[snip here] - - - - - - - - - - -

I have a Kenwood TM-742A that has been behaving strangely. Sometimes while I'm transmitting it becomes "frozen", i.e. the level meters remain at their most recent indication, and I'm not actually transmitting. Often a power reset will clear this, but not always. At other times, it won't respond to the power on/off switch - either it won't power on if it's off, or it gets stuck in the power-up display (the one with just 'on' displayed) when I try to turn it off. One time it got into a state where it had two bands showing the green "selected" light simultaneously. And this morning, the radio froze while I was just receiving, and it wouldn't respond to the power switch. A few hours later, it had revived itself.

Unfortunately none of this behavior is reproducible on demand, and I haven't been able to find any correlations with heat, location, engine running or not, etc. There are no other transmitters in the vehicle.

The radio is mounted in the trunk of my 1993 Accord 2-door, and the control head is mounted on the cup holder, center console.

Fortunately it is still under warranty. I'd be interested to know whether any of you have encountered similar problems, and if so, what you did to solve them.

Thanks in advance for your help.
73,
Nancy / N1OEZ

The 430 sounds like crap without the AM filter..I believe it is
originally wired up to use the SSB filter it comes with...I
have the 430 and know exactly what you are saying...I installed
the AM filter years ago and it sounds great....

Hi name here is Nick and I was wondering if you could help. I own the above radio and I enjoy it very much but there is a hitch. When the radio is tuned via the dial it seems to "chug" along with every click. Unlike most othere receivers where the dial can "freewheel" this dial clicks and every click the receiver silences. Do you know of a way to modify this? Also it seems when you direct enter a frequency it defaults to AM can this be changed?

Any help would be appreciated.

>monitoring.

Hi Joe,
I agree the 91B looks like a pretty good amp, but you did make a major
error.

The 91B TUBES are **NOT** made by Eimac. They are a single source tube
from Russia, there is **NO** other direct replacement made by anyone else!
The closest Eimac equiv is a 4CX1500B, but the socket, voltages, and grid
components would all need to be replaced at a cost of over $2000 US if the
sole Russian tube source ever goes away.

Personally, I have a difficult time understanding why anyone would want to
save a few hundred dollars just to use a tetrode only available from one
source in the entire world. It seems penny wise and future foolish!
Especially with the political problems in Russia today.

The notch in it works very well. The rest of the features are pretty well
useless.
So if you're only looking for a notch, buy it. If you're looking for
selectivity or noise reduction forget it!

That is WHERE all the SSB and CW activity is.... 50.125 is the national calling frequency and 50.110 is the international calling frequency. You are not hearing anyone since we are past this year's E-skip season. There is a chance you might hear someone on ground wave or the occasional E-skip we might get now.

SUBJECT: FS:TS430;AT250;PS430;SWAN;YAESUMORE
Hello, I have the following items for sale/trade:
1. Knwd TS-430s general coverage RX and TX. Works well but case is cracked. $400
2. Knwd AT-250 auto antenna tuner for Kenwoods (and others) incl. 430. $275.
3. Knwd PS-430 matching power supply. $140.
4. Knwd FM-430 FM board for TS-430 $65
5. Knwd AM, CW, SSB filters for TS-430,830,530,440,130.130. $55 each
6. Swan 270 tube 80-10 meter SSB/CW tranceiver with matching Swan 1200W amp. Both look good and work well. $400 including amp.
7. Yaesu FT-23R 2 meter HT with TTP and some battery packs including 12 volt pack. Works well, has expanded RF mod done. Make offer.
8. Ranger RCI 2950 10-11 meter all mode radio with RF mod done. Also have 100 watt and 250 watt amps. Make offer.
9. Heathkit IM-2410 Frequency Counter 10 Hz to 225 MHz with antenna. Works fine. Make offer.
10. New and used 6LQ6 transmitting tubes. All USA made. $15 each used $40 each new, only have a few!
11. Portable Laptop Computer Mitsubishi MP286L 286 with large mono screen, 20 meg HD, 1.44 FDD, 2400 internal modem, serial, par., monitor, and keyboard ports; with carrying case, manuals and some software. Works and looks like new! $175
12. IBM Model 55 SX 386 computer with 30 meg HD, 1.44 FDD, VGA video card, 2 meg RAM, works great running windows 3.1 now. Make offer.
13. IBM Model 25 8086, 20 meg HD, 720 k FDD, VGA video card. Make offer.
14. IBM compatible turbo XT 20 meg HD hercules video card and monitor. Offer.
Other miscellaneous ham and computer stuff around the shack. Will consider trades too. Tnx and 73 de Jeff N3FMC@WB3FYL OR JFRANKLIN@GPU.COM OR DLCG93A@PRODIGY.COM

> Thanks...de Tom

"Macnet Roster" (ver. 695) has just been updated and is now a stand-alone application! The version number = the number of hams using Macs.

You no longer need HyperCard to use this program - yet it has virtually all of the same features and conveniences.

"Macnet Roster" lists:

o CALL SIGN @ HOME PBBS
o FULL NAME
o ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

of every known amateur radio operator in the world that uses a Mac computer.

You can use "Macnet Roster" to find other Mac users that you can then communicate with directly. Compare notes on software, applications, ideas, hints and kinks, and make new ham friends that use the same computer you do. (You already know how cool you are - imagine accessing "the rest of us"!)

If you'd like the latest "Macnet Roster":

Send me a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER".

Put YOUR INFO (via EMAIL or disk using TEACH TEXT) if you'd like to be included in the "Macnet Roster" or send an update to your stats to me via pkt or email anytime.

Hi Ross,

After owning a Scout for about 1 year using it mobil and portable I
would say save your money and get a FT757, TS430, IC735 ect... The Scout
has problems with RF feed back and freq drift. My buddy who bought it
just 6 months ago has already sold it with the same results.

Gud luck, I hope to work you some day on the air.

3049. Ic-245 Schematic

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-14 00:00:00 UTC
From: n0nas@hamlink.mn.org
Message-ID: <813655270.AA03882@hamlink.mn.org>
Source record: 211387

I have an old Icom IC-245 2 meter FM rig with an AM/SSB adaptor.
Last week the LED frequency display went dark and it hasn't come
back on. This naturally makes it difficult to tell what frequency
I'm on or if the radio even happens to be working.
.
I took it apart and found someone had already been soldering jumper
wires on the PLL board. Makes it sound like this radio previously
exhibited similar difficulties. I've seen several old Icom's that
had problems because of the lousy solder joints on the rivets they
used to connect traces on the double sided board.
.
Since this is the only SSB rig I have access to, I'd like to fix
it but don't have any schematic or documentation at all. I tried
our local ham radio store but their service dept had no manual.
If you have a service manual or schematic for this radio, please
send me email and let me know what it will cost to get a copy.
If you have access to a FAX machine, you could FAX it to me at
work. Just be sure to put my name on the cover sheet.
Thanks for your help.

73's.

The heavier the better....

Just my opinion, but unless you mount the paddle securely somehow, I find
a good heavy paddle is best. I personally used to use a vibroplex
standard iambic and it stayed quite nicely in the seat next to me.

I later mounted the paddle on the gear box, to keep my arm from tiring.

good luck es 73,

Joe

>Jeff, KC1MK

Got to jump in here....

I've been using the 870 for a couple of weeks now, and not commented in this newsgroup, altho I posted a first impressions on the contest reflector...

The 870 has the clearest receiver audio I have heard, period. It may have the best trasmit audio, from what I glean from on the air reports, as well... The digital if filter selection is better than the filters in my 850. The digital noise reduction is marginal on ssb, but works gangbusters on CW. I expected more from "if digital NR" than the 870 delivers. I also have used a 59+ on the 850 for a few months, and can say that the 870 does not significantly improve on that combination for ssb, but beats it on CW. Even with this disappoinment, the 870 is well worth the trade up imho, if only for the better audio all around, and the additional user features, like the excellent built-in keyer, variety of selections/options accessible thru menu, etc...

The 59+ is still in the station, and can be employed with the 870 for even more flexibility, if necessary. I basically like the 59+ for ssb, but usually don't need it for CW, altho the AGC feature is needed on occasion to bring out a weak buried signal. The only negative I've heard on the 870 was by a contester working multi-multi, who observed that it didn't handle nearby transmitters well...

This rig will probably be improved upon in later generations, but for now it sets a high water mark in many important categories of operation. Try one if you get a chance....

Worth 50 bucks if you need an auto notch filter, narrow filter selection,
and don't need noise reduction. I use one in my mobile, to null carriers,
(FT 840 doesn't do this), narrow bandwidth (helps a little), and that's
it. Don't expect it to reduce noise.

3063. Dual VFO trick for FT-8500

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-15 00:00:00 UTC
From: Shawn Wolski <n5una@mail.utexas.edu>
Message-ID: <45pj3r$8i9@geraldo.cc.utexas.edu>
Source record: 211302

If you look through the adverts for the FT-8500, you'll notice that there's nothing there on dual VFOs (the traditional VFO A and VFO B). I'd gotten used to the dual VFOs from my FT-470, so I wondered why the FT-8500 doesn't have that function available. Surprise...it does.

The trick is to set up the 8500 for dual in-band receive, and make the VFO mode active in both displays. For convience, I set the alphanumeric displays to show that had the VFOs active:

VHF: VFO VA (left display); VFO VB (right display)
UHF: VFO UB (left display); VFO UA (right display)

(Keep in mind that the FT-8500 is unable to show in the U&V format.)

>>that the "IF" DSP processing is done at 11.3 kHz; it sounds like perhaps
>>they did it this way so that they could advertise "IF" DSP. Since the

QRX one!!! DSP units work by sampling an incoming signal, converting to
numbers, processing the numbers, and converting back to analog. This
sampling is done at a minimum of 2x max analog frequency - maybe
6 or 8 kHz in an amateur application, and for this the CPU clock speed
of the DSP could be 25 to 50 MEGAHERTZ - a might fast speed indeed.
The DSP has to do a LARGE number of calculations for EACH sample of audio!
Kenwood presumably put the DSP stage at IF to allow it to operate BEFORE
detection and conversion to audio (which is a process that in a traditional
radio requires a DIFFERENT kind of circuit for SSB/CW, AM and FM).
Thus, I'd contend that what you call "IF" is _REALLY_ IF because it is
still a signal that hasn't been detected to audio (or data, or whatever).

For Kenwood to have DSP operating at 11.3 kHz, it would need to sample
at at least 22.6 kHz - and for each sample at this rate the DSP would still
need to do a LARGE number of calculations, just faster than before. The poor
DSP would have a hard time keeping up, but perhaps they've used a faster
clock speed on their DSP - maybe 50 or 100 MHz, which is still feasible
(I haven't looked at the 870 schematic so I don't know). In any event, for
a traditional amateur IF of 455 kHz or even 9 MHz, you would need to sample
at 910 kHz or 18 MHz respectively, the DSP would STILL need to do that LARGE
number of calculations for EACH sample, so you would have a DSP operating at a
proportionally higher clock speed. I haven't seen any 2500 MHz clock rate
DSPs, let alone 50 GHz clock rate DSPs, so the point here is that to have
DSP in the IF (presuming you want to DSP before the detection stage),
they had to get the IF frequency down as low as possible, and 11.3 kHz
sounds like a perfectly reasonable number to me given the current state of
commercial DSP technology.

I'm certain that as we proceed closer to the "all digital" radio, we'll see
at least for the near future these very low IFs.

Now if Kenwood could do an IC-706 type radio and get it right, I'd be happy!

Here's another approach- for around $300 you can get a new GPS receiver
(such as the Garmin GPS45, you may also be able to find used Motorola PVT-6
units for around $150) and get accurate times that way.

There are also shareware programs for the Macintosh for setting the time of
Macs on a network. I've got one machine with a PVT-6 hooked up to it running
a hack that checks and updates the system clock periodically. It's also the
"master" for the time setting code- other machines run the client part of
the program on startup.

cheers-

There is a commonly available freeware utility for the Mac called AutoClock that will automatically call a server, such as the NBS in Ft. Collins or the Naval Observatory server, and then set the computer's clock. You define when and how often the calls are made. In addition, the app keeps track of the computer mean deviation vs. the server and over a fairly short period of time, say calling once a week over a months time, develops enough data to keep the computer's clock within a second of reference. It even switches between standard and daylight savings time. Very slick, and free to boot! Written by Jean-Pierre Gachen. His I-Net address is listed as: jpg 11@calvacom.fr

Don't know if there's anything comparable for PCs, but I'd be surprised if there wasn't.

One of our local T-hunters, Jim K5QQ, bought the Vector Finder and
used it for quite a while, but found that generally a simple small
beam antenna and attenuator system worked equally well or better.
He did, however, really like the compact size and antenna arrangement,
the latter being collapsable and convenient. He eventually gutted the
box, and built the W9DUU Direction Finder circuit into the same box.
(FOXHUNT RADIO DIRECTION FINDER by Paul Bohrer W9DUU,
73 Magazine, July 1990, page 9). I may be putting words in Jim's
mouth, but I think he likes this circuit much better.

>I've seen someone advertising an active attenuator for T-hunting. It's of
>the "shift everything 1 MHz up in a mixer" type and cost something like
>$50. Does anyone know who sells these? Any opinions, advice, etc.?

Several of our local T-hunters have built various interpretations of
the active attenuator (myself included), and we all think this is a
VERY handy T-hunting "weapon". I would think that $50 is way
too much to spend, since you can build one yourself for a LOT
less. I built mine to offset the frequency 10 Mhz, rather than 1 Mhz,
to get the signal out of the 2-meter ham band. I once used mine to
zero in on an 80-watt signal fed into an eleven-element beam, and
was able to aim my four-element search beam right into the path
of the signal and still keep the S-meter on scale. Pretty impressive.
I admit, though that I did not have much success with the original
circuit that was described in QST, because that one still put out
too much signal. It took a bit of experimentation with various
circuits and additional attenuation inside the active attenuator
itself, to be able to quench the output enough to do what I just
described.

>BTW, has anyone considered making a fox-hunting group? Think there's enough
>interest?
>--

You have my vote.

Joe, the only ham store in Houston doesnt carry much...the
Houston ham market has sucked always (I know...I have dealt with
it for 20 years!)....The Houston AR Supply store in north side
(Spring) has little gear on display (George has been opened for
more than a year but his business is low overhead)...
As for rptrs, there are a lot....MOST open rptrs in Houston use
103.5 PL but some use 123.0 (a MOT favorite)....or 162.2 (the
146.94 machine does)
The following is a SMALL list of 2 and 440 machines:
145.47 BVARC 123.0 pl
146.66 NARS west side Galleria area...COS
146.86 EOC 103.5 PL Houston ARES
146.88 1400ft(oldest 2mtr rptr in Houston) 103.5 PL
146.94 as noted above
147.08 Echo society Open Autopatch *89 up # down
147.32 Echo Society Open AP *89+ number up (RC 850)
147.36 TX DX Society
442.5 SW Houston 103.5 Pl
444.3 West Houston/Galleria (146.2 PL semi closed) Texas Rptr
Network....linked with 444.8 Conroe/N Houston (My rptr-same PL)
444.6 1400Ft sister to 146.88 (71.9 PL)
Hope that helps...give a call on 444.3 while in town

Steve,
I still have some of the old ACC EPROMs from my earlier versions on my RC850 and the Shackmaster 100.....If they can be of help, I will be glad to provide them at a LOW cost...(or trade, discount on a DVR for my 3s etc...hint hint!)...

Also, are you still wanting to send me a beta test of the RLC 3 software for the new dialing tables??? whats the latest release on the RLC 3 and 2? Do I have the latest version (since I did get those RLC 3 eproms from ya at Ham Com in DFW earlier this year?) Also, I need additional doc on the autopatch, etc...the sheets you gave me eluded to some changes yet I do not see them anywhere in the actual command sheets....

FAX here is 409-760-7477....voice is 409-525-2001...

Also have a LONG list of wants on the RLC 3 now that you guys have bought ACC....plus am available for programming help on the RC850/85 and SM100....and DO you have a COMPLETE schematic on the SM100?? I sure could use one...one of my Shackmasters in on the fritz and I would like to fix it but without a FULL schematic Im in the dark on the IO to the CPU.....

Thanks!!!
Chris WB5ITT

I'm thinking of getting a Kenwood TH-79E. It's rather new in the UK, so there don't appear to have been any reviews of it in the magazines. Has anyone out there got one (or the TH-79A), and what do you think of it?

The Japanese S-2001A is their version of our 6146B. Do not substitute the
6146A (normally only available used or surplus) ... it is not designed
for linear service for SSB, and the bias voltages are somewhat different.

3081. PRODUCT REVIEW: SMARTBRIDGE SOFTWARE FOR PALOMAR R-X NOISE BRIDGE

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-15 00:00:00 UTC
From: mc@shore.net
Message-ID: <45scbf$r4c@northshore.shore.net>
Source record: 211320
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

PRODUCT REVIEW: SMARTBRIDGE for PALOMAR ENGINEERS' R-X NOISE BRIDGE

Recently I posted a product review of the PALOMAR ENGINEERS' R-X Noise Bridge. SmartBridge is a program that allows you to measure antenna impedance and SWR using data obtained from the R-X bridge and provide an analysis. The main advantage using SmartBridge is that you can take measurements at the input end of the feed line instead of having to connect the R-X Bridge directly to the antenna terminals.

Since the measurements are to be taken at the transmitter end of the transmission line, it should be obvious that the characteristics of that line must be taken into consideration. Smartbridge takes you through a characterization process of the transmission line you are using with this antenna. Now, you can use SmartBridge from inside your shack to compute the actual impedance and SWR just about every antenna, from the lowly dipole to log periodics. However, the feedline must be co-axial cable.

In order to make transmission line measurements you will need to make up a few simple test adapters (which are not supplied with either the R-X NOISE BRIDGE or the SmartBridge software). These are very simple to make - you'll need a couple of SO-239 and PL-259 connectors, couple of 100 Ohm resistors, etc. Once this is done you are equipped with a powerful and extremely useful antenna measurements tool.

Here's how it works: once your transmission line characteristics have been defined and entered all you have to do is enter your noise bridge measurements in a familiar, spreadsheet-type screen. Results can be graphed on the screen and printed for future reference and comparison. Also, many different transmission line characteristic data can be saved for use later.

As with the PALOMAR ENGINEERS' R-X Noise Bridge, I found SmartBridge an extremely useful adjunct to help to keep my antenna technical files up-to-date and meaningful. I have seen the antenna/swr analyzers available for substantially more than the cost of both the noise bridge and SmartBridge software together ($110.00) . I wonder what they can do that this pair from PALOMAR ENGINEERS can't?

Since you mention that the radio is remote mounted...
The problem sounds like there may be a poor or intermittent connection
in the remote mounting wiring. The head communicates with the main
chassis to update the display and send back any changes in front panel
controls. According to your description it sounds to me like the data
connection is being lost at times.

The first thing I would do is to check the connections of the remote mounting wiring...make sure the connection at the chassis and at the head are good. Your friend may want to take them apart and re-connect them. See how that goes. If the problem presists then I would put the radio back together as a complete unit...eliminate the remote mounting kit and run it like that for a week or two. If there problem disappears then the culprit was indeed the remote wiring.
Have a look at the remote wiring...make sure there is continuity between either end of the 4 wires...look for nicks or cuts throughout the whole assembly, Perhaps it has been pinched by a door, the trunk or the kickplate in the car depending on the installation.

If the problem is still there with the radio put back together (head attached to the main chassis..not remote connected) then obviously there is a problem within the radio...if your friend is so inclined he/she may want to open it up and look for poor solder joints and/or cracks on the pc board.

Hello All,

I have designed,built and tested a ETACS ESN,MIN,Telephone Number dialled reader.

This device interfaces to a PC via the printer port and has to be wired to the
discriminator output of a scanner.

It has been tested on a TANDY Realistic PRO-2006 and an AOR-3000A Plus scanner.

The discriminator output is the ONLY reliable means of extracting the data.

The unit itself is approx. 6cm x 5cm and can be powered and mounted within the
scanner.

The software will log the ESN (Electronic serial number), MIN (Telephone Number), and Telephone number dialled.

In addition the software incorporates basic error checking.

The ESN and MIN are logged to disc as a text file.

The unit is primarily designed to verify a phones identity but is sensitive
enough to log details from some distance.

The unit is 300 UKPounds and can be supplied within a few days.

E-Mail: tech@medsin.demon.co.uk

Fellow amateurs.

Can I use a 12 volt deep-cycle marine battery to:

1. Power my HTX202? If so can I use the same guage wire that I use
with the gel cell? Pardon my ignorance but the battery is so big
compared to the HT. The battery runs the 12 volt system in the
camper.

2. Power my Radio Shack 30 watt power AMP? The AMP draws 6 amps
of current continous and I think the in-line fuse is
8 amps. I bought a regulated power supply from Radio Shack
that pops its breaker at 2.5 amps. It is ok for packet
but voice draws too much. The supply gives 13.8 VDC steady.
The battery would give probably 12.5 VDC and slowly drain off, obviously.
Any problem with that? Again does the guage of the wiring
make a difference?

Finally, I built a 2 meter ground-plane antenna from 12 guage wire
and a RO-239(?) connector. It works well off my HT, but would like
to use the AMP to it. Would 30 watt power hurt it? It has one
verticle radiator and two radials.

Thanks de N9ZFF

Absolutely No problem here, but I have been told to take off the battery pack when using the 202 on External power. Seems to build up less heat.

>2. Power my Radio Shack 30 watt power AMP? The AMP draws 6 amps

> make a difference?
1st,
of course the amp will pop the breaker, it draws 6 amps, the supply is rated at 2.5, not really a surprise. On Packet the transmissions are verry short and the supply handles it, but either use a bigger supply or use the battery you spoke of with a charger on it. (Even a small 2a trickle cosidering the duty cycle you will probably run.)
2nd,
The wire does make a difference, and I wouldn't worry about the drop in voltage. On the 202 all that does is lower the output power until the voltage drops low enough to drop out the HT altogether. For wire I use polarized lamp cord at 16 AWG. Good for 8-10 amps with no problem (again - duty % makes a difference as well as length)
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire

You have 1 radiator and 2 radials, I might add a third to bring it closer to 50ohms but it should work just great. Put it this way, it is a heck of a lot better than a duck!

> camper.

Yes. 12V is 12V regardless of where it comes from. The same gauge wire is
OK as well, since the HT will only draw as much current as it needs. But
it is *vital* to place a fuse or circuit breaker of a size apropriate for
the capacity of the wire right at the battery, so the high short-circuit
current of the large battery won't cause a fire in case of a short.

> Any problem with that? Again does the guage of the wiring
> make a difference?

This will work fine as well. The amp may not output quite as much power
with 12.5 V instead of 13.8, but it won't damage anything. The reason the
power supply works on packet is because the breaker is a thermal type that
does not trip instantly. You are drawing 6A from the supply (actually
less, since the voltage will drop) in either case, but the breaker doesn't
have time to open on packet. Wire of 16 gauge (what probably came with the
amp) is OK for short runs at the 8A level. It is important to keep the
wiring short so the voltage at the amp stays as high as possible. If the
wire must be more than a few feet long, consider going to 14, 12 or 10
gauge, not as a safety concern, but for higher performance. Again, the
fuse should be located right at the battery so any possible shorts in the
wiring will cause it to blow. The best way to tell if your wiring is
adequate is to measure the voltage at the amplifier and at the battery
while transmitting. If this test shows more than 0.5V or so drop, larger
wire will probably get you more RF output.

>
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire

>to use the AMP to it. Would 30 watt power hurt it? It has one
>verticle radiator and two radials.

This will handle 30W just fine. I have used such antennas at the 100W level and they can probably handle much more. The thing to be careful of is to keep the antenna reasonably away (10' or more, but this is a trade-off with loss in the coax) from the rest of your hardware and 'wetware' when running high power. This is so the RF doesn't feed back in to low-level circuits and cause problems. Moving the antenna straight up is the best direction to take when moving it away.

Sorry if this post isn't exactly on topic - it's the best I could do.

I recently 'acquired' an old Motorola Motrac two-way radio, minus
control head and mike (but with all docs, manuals, etc.). I wanted
to retune this puppy for two-meter use in a fringe area. Question
is, can anyone point me to a source for Motrac control heads, etc.?

Any and all responses appreciated, either by email or usenet post.

Thanks!

3101. Dedicated radio for packet?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-16 00:00:00 UTC
From: d-cripps@dircon.co.uk
Message-ID: <45t64p$hjq@newsgate.dircon.co.uk>
Source record: 211338
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment

I've recently got back on the air and linked my Icom 2/70 handheld up to a PK232 to experiment with packet.

The thing is my handheld is a bit OTT as a single freq, packet, transceiver.

What I'm looking for (I think) is a dedicated radio that can act as my packet radio, transmitting approx 10W. What should I be looking at?

Any suggestions for second hand mobile rigs or ex-PMR (although I've never done any conversion work and am a little apprehensive of this route) or possibly a specially designed packet rig (if such a thing exists - I vaguely remember a review in an old HRT of a KAM 2M packet?) welcomed.

73s and thanks

>this HT as well as an external mic?

>Jim VE7JLS

Hi Jim,
I do a lot of 440 work, so I plug my speaker into the far right jack
(440 audio only) and the mic into the other one. If you want to do
this on 2M, you can check and see if your speaker/mic has an earphone
jack on it. If it does, hook your speaker in there. Works great for
me. --Mike KD6PKJ

Dave,

My first HTX202 failed within the first 2-3 days with a very similar problem; the keypad and function key seem to be the common denominator. My function key and Light key seemed to become shorted, pressing either turned on the light, but none of the function sequences worked. Also some of the other number keys were non-functional (e.g. pressing a "6" returned a "3").

I took it back to the store for a warranty replacement, no questions asked.

The failure may have been related to having a very low battery charge - that's the only other indication I had. It definitely did not recover after recharging the battery.

Good luck

I took an old computer mouse and wired it to use as a paddle. It's held
to my thigh with a velcro strip run through the mouse and held in place
by the top clamping it to the bottom. It seems to work fine. I haven't
used it enough to get good enough to use it in a conversation but that's
just re-learning some fingering.

Meeting the required technical specifications is not the same as being
Type Accepted. The latter requires submission of test results to the FCC
in order to have a Type Acceptance number assigned. Unless that's been
done, the equipment combination you're describing will be illegal for use
in the commercial spectrum.

>bandwidth? Are they adjustable?

11 KHz is just as legitimate an IF frequency as 455 KHz, 9 MHz or
40 MHz. The fact that 11 KHz is audible is immaterial.

The real question is how vulnerable preceding stages are to overload and
IMD. Assuming AGC is derived after the DSP, this is probably determined,
in part, by the location of the points at which AGC is applied.

If dynamic range and IMD specs of this unit are good, then the IF
frequency is probably of little, if any, consequence.

Source record: 211351

I've just been looking at the ads for this rig. No doubt the major upgrade, to my thinking, is the addition of the Collins mechanical 2.75 khz filter. Ironically, the baby was thrown out with the bathwater some fifteen or twenty years ago when digital became the dominant trait of design trends. Collins mechanical filters are very flat, very steep and have great ultimate rejection at the bottom of the skirt. Tuning a Collins-equipped rig is distinctive: now you hear 'em, now you don't. Using 2.75 Khz bandpass is also a significant design feature, as at least the average voice has (allegedly) been shown to retain the maximum balance of intelligibility at about 2.7Khz. The FT-1000MP offers wide control options over what filters are cascaded for a given reception situation, taking good advantage of the potential of multiple resources. Additional narrow mechanical filters are, I think, offered optionally. Dual true receivers and separate optimized preselectors for lower and higher bands add to the potential for severe-signal reception.
Remember, ARRL Labs tested the FT-1000 and summarized that it had the best receiver specifications that it had *ever* tested! I can't imagine that anything out there, even W-J's HF-1000, will approach the MP in this regard. It may be a bit weak on AM reception without a syncronous detector etc, but exhulted (ssb) reception of AM does the job better than sync when the going gets tough, though with reduced fidelity. In addition, there is nothing to stop you from selecting a Collins filter replacement with bandwith of your choice for any such special application, given the apparent control you have over filter selection. Yep; looks to me like the best of the best-- but after decades of promises and disappointments I for one will wait for a good solid review to confirm my suspicions before replacing my ageing KWM-380. K9ZAT.

> camper.

Yes. The load (the radio) determines the size of the wire needed.
Since the '202 draws abt 1 amp on high power transmit, light guage wire
will be OK on either power source.

Physical size of the battery isn't the concern...voltage is. The
larger battery will last longer (a lot longer, most of the time.)

It will work fine.

> Any problem with that? Again does the guage of the wiring
> make a difference?

Depends on the length of the run from the amp to the battery. The
longer the run, the larger guage of wire you need to reduce voltage
drop.

>
>Finally, I built a 2 meter ground-plane antenna from 12 guage wire

No, the output of the amp will not hurt the ground plane. Make sure
you have a good match (SWR) between the amp, or the protection circuit
of the amp will shut down the amp.

Curious...why didn't you add the other two radials?

>things when they design the radio's. After all we aren't the only ones
>using HT's as mobile rigs. Thanks for the advice.

The way the W2a works is that there is a separate UHF audio PA,
which is routed through SP2. If there is nothing in SP2, the signal
is attenuated and routed to the VHF PA, on SP1/internal speaker.

This is why their headset has two speakers: one for VHF, one for UHF.
You can't always win.

Does anyone have one? The mic connector comes from the RADIO
and not the face plate, right? Is this a problem? Is there an
iambic keyer in there? How's the 500Hz CW filter?

How's the receiver? Has anyone seen any reviews?

I talked at length with Yaesu representatives at the recent Virginia Beach Hamfest concerning the 1000MP. This is an upgrade to the FT990, not the 1000D. Although the 1000MP receiver is an excellent one, it is not a 1000D. The second receiver in the MP I'm told is no better than the second receiver in the 1000D. A replacement for the 1000D is in the works and is expected to be available in 12 to 24 months. Based on this information, I have decided to stick with the 1000D until something better is available......Ron, W4VR

The receiver may be ok but most FT1000's I've heard on CW sound like other Yeasu transmitters. Their QSK clips the dits. Check the scope patterns in the QST reviews. I don't know if they have overcome this in the newer version. Probably, SSB ops won't care anyway.

The gain of your amplifier should not be less than approximatly 10 dB.
100 watts in = 1,000 watts out, give or take.

Source record: 211270

Does anyone out there have any Mods for the FT726?

I've checked most of the server sites and they seem to be awash with
mods for 9600 packet, but what I'd like are mods to pep up the RF
performance.

Does anyone have any "pet" modifications they have, especially to
reduce background noise and increase sensitivity?

Thanks in advance.

>Geert Jan

While on the topic of the IC-W2a - My W2a started having weaker and weaker audio out.. so that the volume had to be turned up louder and louder to get the same audio level out...

Seems as though it is fine when first turned on, and then when it warms up (either by transmitting,- warms up quicker, or just listening - warms up slower) the audio goes almost dead.. It comes back on and then goes off again, going from this loud to soft without touching the volumn control!!

I thought it might be a problem with the external mic jack.. nope..
thought it might be dirty volumn control.. Don't think so.
I really think that it might be that the internal audio PA in the HT is going soft..

Has anyone ever replaced this audio PA, or is it a "send it in to ICOM" deal????

PS. I think that it does it on both UHF and VHF.. I mainly listen to VHF though.

Thanks for any ideas about this problem..

Hugh -

|>
|> Jim
|> N7IHQ

Jim,

Thanks for the information about the 870. It appears that the 870 does
indeed offer decent filtering at the higher IFs, which answers one of my

serious concerns.

I realize the limits of current DSP chips, and did not mean to imply that it is currently feasible to offer DSP at typical IFs such as 455 kHz or higher. I was questioning the true benefits of IF DSP in the 870. If the DSP at the 11.3-kHz IF prevents signals outside the DSP-determined passband from affecting the AGC action, then this is a true benefit of the 870's IF DSP, as compared to an outboard audio DSP.

I look forward to seeing some published reviews of the 870, as well as more firsthand accounts from users. My 850/DSP-59+ may well lose its spot to an 870, but I will have to think long and hard about this first.

73,
Jeff, KC1MK

Hi Duffy,

Not according to the Guide to Personal Newsgroups. The information in the guidelines has been updated on an ungoing basis as the Newsgroups expanded. It very specifically states this is *NOT* the place for equipment sales, swap or wants. It is specifically intended for discussions about equipment. The guide further states that rec.radio.amateur.swap is the only place to post sales and purchases.

Check the output power on 10 meters. If it's not up to spec there but is on the lower bands, you may need new finals. If you don't have a reliable watt meter, use a 100 watt light bulb as a dummy load and fire it up on 10 meters. If it appears to be fully bright, you're probably OK. 6146Bs tend to last a long, long time if not abused.

: in central PA)? Any problems?

Anyone willing to bet that the new MFJ-9406 rig will not see the light
of day for at least six to nine months? From my humble experience,
I find that MFJ has a tendency to heavily advertise new products for
many months prior to its actually release to production. I own over
ten various MFJ products, and am mostly satisfied ... so, I'm not
a disgruntled type. But, I have had to wait many months for some
products that were not available even though advertised. Those
1/2 wave multi-band verticals are a case in point.

Cheers

> (anonymous) heaven are not.

I agree with you that anonymous "orders" are not appropriate. The poster should at least sign his/her/its name. However, what he/she/it says IS CORRECT. The charter of this newsgroup is the discussion of production amateur radio hardware. The charter of the rec.radio.swap group is for sale, want to buy, want to trade messages. This is all spelled out very nicely in the Guide to the Personal Radio Newsgroups that Jay Maynard posts on the 15th of every month.

3152. Search and Rescue

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-18 00:00:00 UTC
From: las5s@kelvin.seas.Virginia.EDU
Message-ID: <DGMAwn.JyL@murdoch.acc.Virginia.EDU>
Source record: 211215

The Blue Ridge Mountain Rescue Group, located in
Charlottesville, VA, is a volunteer rescue organization that
responds to search and rescue emergencies throughout Virginia,
Maryland, WestVirginia, Pennsylvania, and North Carolina. We
currenlty use HH ICOM H-16 VHF radios that use NiCad batteries
(CM7s and CM8s). Because these batteries undergo heavy use,
after a few years many register no voltage and cannot be
recharged. I imagine in many cases this may just be the result
of a blown fuse or two and not simply the result of memory.

Because the batteries are expensive, we would like to
repair any that we can. The only problem... I don't know how
to do it! Is there anyone out there that could either direct
me to someone who can help us in fixing these batteries or
donate their own time and expertise?

Thanks,

Lauren Schiff
KB8WLD
Communications Officer, Blue Ridge Mtn. Rescue Group

P.S. Due to the size of this newsgroup, it would be great if
responses are directed to my e-mail address:

>part code for it.
>
The IC-2340H that I have is an American model (I think..??)

I opened the radio and see a board 1/2 inch tall by 1 1/2 inches long..
it has the number B4254 silk screened on the back, and a bunch of SMD
components on the other side. (I think this is the 900 Mhz front-end
board that you were speaking of??, and it was installed - solderd in with the
radio as purchase new in the box)

It has 16 pins along the bottom side which are soldered into the main board,
and there is a jack J1 which is for a very small coax connector which is now
used and empty. This is on the bottom of the radio, not the speaker side (The
speaker is on the top of the radio)

Hope that I won't have to order other pieces from ICOM and that this is indeed the
900 Mhz front end board that I need!!! (part number B4254)

Erik,

I opened the radio and see a board 1/2 inch tall by 1 1/2 inches long..it has the number B4254 silk screened on the back, and a bunch of SMD components on the other side. It has 16 pins along the bottom side which are soldered into the main board, and there is a jack J1 which is for a very small coax connector which is now empty and not being used yet. This is on the bottom of the radio, not the speaker side (The speaker is on the top of the radio)

This is an American spec IC-2340H radio ..I think.!!?? And it did come with this little board already installed (soldered in). I just hope that this little board is the 900 Mhz front end board that Erik is speaking of. Can anybody else out there confirm that this is the case?? (part number B4254)

There is also a 2 pin jack labled J3 next to this long board. How is this jack used, if at all??

>
>To activate the receiver extension, you have to first cut the diode(s) and then

3155. Re: Wanted: tube specs for 6146B/W

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-18 00:00:00 UTC
From: James Garland <garland@ohstpy.mps.ohio-state.edu>
Message-ID: <463sck$kf2@pacific.mps.ohio-state.edu>
Source record: 211218
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

As I recall, the 6146B should not be used in circuits intended for the 6146 or 6146A. In addition to having higher plate dissipation, the 6146B requires a higher screen voltage to obtain the same operating point. Therefore, if a 6146B is plugged into, e.g., a Viking Ranger, it won't have enough screen voltage to maintain the same power output as a 6146/A. At least that's what I recall from years ago when the 6146B was first released. Someone pse tell me if I"m wrong!

Who knows, but at least the present source is in a more stable area of the world!

>Is there another reliable source besides Eimac?

Not that I am aware of, but it is much easier (in an HF amplifier) to replace a triode with another type triode, than replacing a tetrode with a different type tetrode or triode!
The screen voltage (and current limiting circuitry), control grid supplies, and input circuitry are generally what complicates the tetrode swap!

Well, you might tend to think that, but real world experience with an
FT-11r and 5 watt and 2 watt batteries shows me that 5 vs. 2 often makes the
difference between being heard and not being heard, in buildings, behind
buildings, etc. YMMV

I should add that the 2 watt battery seems to outlast the 5 watt battery
even when using the HT at the same power level. I guess the amp-hours
are what counts with the power circuitry in the FT-11.

Actually in a formal newsgroup (any newsgroup outside of the .alt groups)
the FAQ normally serves to set up the guidelines of the group. These
are the guide lines that got the group started on a formal basis in the
the first place. Now if the FAQ says we should not post FS type
messages then most people will try to respect that. But, IMHO, we
should not get overly up-tight when new user posts a FS before they have
seen the FAQ or every time someone sends an accasional ad.
In fact the respectful thing to do would be to send the poster a polite
e-mail message saying that this is not the proper group to post FS on.
Flaming the poster on the news group is just a waste of bandwidth.

If rec.radio.swap has become to full of non ham equipment, and most
people can't get rec.ham-radio.swap then maybe a new group should be
started. And maybe until it can be started we could relax a bit and let
the ham FS posts be put here. They are far less annoying than
anonymous
posts from gut-less wonder wanna-be net gods. But hey, this is no
different than being on the air. We can find lids anywhere.

LW>Just wanted to get some idea of what a Heath SB-200 will put out
>with 80-100 watts in and what the expected efficiency is.

Mine seems to be putting out somewhere around 400 to 600 watts based on my meter(s). I know someone who has a bird meter, but I never actually got to borrow it for an more accurate reading. I have a friend who also has an SB-200, and his also seems to be putting out around the same power level (using his meter). Both have the original tubes that came with the units. Neither of us know what the history of usage on those tubes is prior to our ownership of our respective units.

The input power level, based on Plate Ma * 2400v (about 400-500Ma) is about a kilowatt, so perhaps the tubes are just weak. Amplifier design is not my area of expertise, so I don't know what the efficiency normally is for that class of amp.

Tom,

Seems like the government SHOULD be running the Internet since there
are a lot of similarities. Lots of rules and lots of people telling
you what to do and not to do; just like the government.

Like most things throughout time they evolve. Maybe it is time that
this newsgroup evolve into what the users want. If that includes and
occasional FS post, then so be it.

Regards,

Duffy - WB8NUT

3166. Need Code-A-Phone Remote Access Codes

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-18 00:00:00 UTC
From: jphipps@aztec.asu.edu
Message-ID: <461jma$eu6@news.asu.edu>
Source record: 211279

I recently got a used Code-A-Phone Answering Machine which, after the addition of an AC adapter, seems to work fine. The remote security code was stamped on the back so I can access it for messages.

However, there are other remote codes to save messages, re-set the incoming message flags, etc. Those codes normally come with the instruction book which is missing.

I would be most appreciative if anyone could enlighten me on what remote codes Code-A-Phone uses. My particular model is #2600, but the remote codes are probably similar for all Code-A-Phone machines.

Any thoughts or advice will be appreciated. Thanks in advance!

Lauren
Our SAR team uses the same radios and we had the same problems. It was caused by the fact that after every training practice (once a week) the radios were used for a short period of time and placed back in the chargers for another week. After replacing 24 battery packs in about a 6 month period we decided to try something to correct the problem. The solution was to have a second battery pack for every radio. When we come back from practice the partially used packs go into a discharge / recharge unit rather than the standard Icom charger. The discharge / recharge unit was fairly expensive ($1600.00 and charges 24 radios at once) but has probably saved us several times it's value in battery packs. We didn't want to go with a single pack for every radio because you can be guaranteed that a call out will come in when every pack is just finishing the discharge cycle so we always have a fully charged set of batteries on hand. I don't recommend trying to repair the packs yourself. This may be ok for the average ham but in SAR work the radios are being subjected to heavy use, physical abuse and moisture and with lives depending on them you just can't take a chance on a soldered battery pack connection failing. Drop me a note if you need any further info.

Source record: 211283

Hi all,

I'll try to clarify a few issues about ultrasonic digital IFs as applied to the TS-870.

Jeff wrote:
>I'm highly suspicious of the so-called IF DSP on the 870. Interesting
>that the "IF" DSP processing is done at 11.3 kHz; it sounds like
>perhaps they did it this way so that they could advertise "IF" DSP.

The IF frequency is limited by the Motorola 56000 DSP chips operating at 20 MIPS and the 16 bit A/Ds sampling around 44 KHz. This is near the state of the art for commercially available parts. Low frequency IFs have been used successfully in other products. The Watkins-Johnson HF-1000 general coverage receiver uses a 25 KHz IF. The Drake R8 uses a 50 KHz IF. A direct conversion SSB transceiver published in QST recently had a zero frequency IF!

>Since the 870 has no provisions for optional crystal filters at the
>higher IFs, it seems that you essentially end up with no benefits a
>good audio DSP can't provide, and you don't get the benefits of proper
>IF filtering either.

In addition to the DSP IF filtering, the TS-870 has a 4 pole filter in the 73 MHz IF, 6 KHz and 3 KHz bandwidth filters in the 8.83 MHz IF, and 15 KHz, 6 KHz, and 3 KHz bandwidth filters in the 455 KHz IF. It doesn't need any more selectivity in the front end.

DSP filters at the 11.3 KHz IF reject signals outside the passband before detection and AGC desensitization. The automatic notch filter also operates in the DSP IF. The noise reduction modes operate after detection, so it may be no better than a good outboard audio DSP unit. I like the convenience of the having the DSP integrated inside the transceiver.

Best wishes,

Jim

Hi,

I have the original W9GR DSP unit as described in the Sept.(?) '92 QST
issue.
Now I understand there's a newer version (DSP3?).

Does anyone have comments on the new unit's performance, especially as
compared to the original model?

Thanks.

Dale E. Heltzer, KD0KV

People say I'm indecisive.
Am I?
I don't know.

If people cannot post their feelings and opinions with their name attached, then such dribble should be ignored. The newsgroup is equipment and equipment covers a broad range including the sales there of. So, post all the "FS" messages that you want. Maybe when this coward decides to uncover himself, we might listen to his suggestion.

He is correct. The tubes are rated at 165 watts dissipation each, the
output should be between 400 and 500 w if the tubes are not being pushed
excessively. Remember Heathkit's ratings are the POWER INPUT, not output!
And the plate efficiency is around 45-55% in that amp.

>
>73's in advance, Curt, N3TLJ@WA3KXG.FN10RE.PA.USA.NA

The 50 to 50.3 coverage is very adequate. You hear most people on six
when the band opens up. However, since someone has finally come out
with a reasonably priced six meter radio, I am confident that we may
see local rag chews becoming more frequent.

I believe this radio is very similar to the MFJ 20 meter travelradio.
I have one of those and think it is fantastic. The receiver is very
quiet and sensitive, although I wish it were more selective. That MFJ
jobbie looks like a real winner.

850 degrees F isn't all that hot. We use Weller 800 degree tips in all our irons at work (PCB assembly) and they do fine. On some very delicate items we may use 700 degree, and once in a blue moon, 600, but 98% of the time, 800 does the job.

A common error when learning to solder is using a low temperature iron to "avoid damage". Often that causes MORE damage because of the extra long heating time required. With a hot iron, you get on the joint, melt the solder quickly, and you're off before the component has a chance to get hot. Works like a charm.

The focus of this thread, after the original posting, dealt with people playing "net police" and then not identifing themselves on their post. If you are going to be the police of the newsgroup, then have the guts to identify yourself.

Citizens are not obligated to follow the instructions of someone claiming to be a police officer that cannot properly identify himself or herself as such. So it should be on the net.

Egon-

I can't argue the theoretical differences, or whether the TS-830 has some unusual requirement that isn't met by the older tube types.

Over the years, I've used 6146s in several different rigs, from SSB to NBFM, including a repeater. In my experience, all versions work. An individual tube may be better than another, but it doesn't seem to relate to which variation is involved.

One factor that DOES make a difference, is how the plate cap is attached to the wire coming out of the glass envelope. The best method is welding. The older tubes were soldered. After many hours of use, the tube's heat plus the high peak current, causes solder to crystalize. The result is a loose connection at the plate cap. It is possible to resolder, but it is a loosing battle with ordinary solder. (When it occurs, there may be a visible circle, about 1/16 inch in diameter, in the center of the plate cap.)

If you have tubes with soldered plate caps, go ahead and use them. Just be aware of what might happen after a long period of heavy use.

It is probably a good idea to keep both tubes as closely matched as you can.

I checked with someone else who is more knowledgeable in tubes than I and
he said that this could very well be the case. He also pointed out the
differences on an s-meter between some slightly different power outputs...

I still think if push came to shove, I'd just plug it in and go for it.

Hi all from Joel in Calgary. I'm hoping to buy an HF rig soon, so I need
to do a little house cleaning. Help me out here!!!

1. Yaesu FT290RII - 2 metre all-mode mobile/portable
- with DTMF mic, clip-on 25W amp,Ni-Cad pack,
rubber duck, operator's & service manuals.
- In very good shape -> $600

2. Kenwood TR-2200A - 2 metre FM portable, crystal rig,
puts out 2W with Ni-Cad pack.
- Includes Micronta power supply
- $100 obo

3. Heathkit DX-60B - 5 bands on HF, CW & AM transmitter.
& HG-10B - V.F.O. for the above.
- A real early 60's classic -> $150 obo

4. Realistic SX-190 - Very good quality shortwave receiver,
used with the DX-60B. Early 70's model.
- $100 obo

5. Atari 1040ST - Computer with 1 MB RAM, graphical user inerface
in ROM, 720 K 3.5" floppy, color monitor, mouse
- Also includes serial, parallel, games, mouse
and MIDI ports. -> Best offer to a good home!

6. XV4-2/5 Transmit Converter - 10m in, 70cm out at 1.5w
- can switch between 432-434 and 435-437 ranges
CC432-2/5 Receive Converter - 70cm in, 10m out
LPA 4-35 Power Amp - 30w linear, 40w FM
TRR Transmit/Receive relay, and Receive preamp
It's all housed in a metal cabinet to keep things organized,
and includes manuals...
I'm asking $300, which is a steal as the new price is $400 US...

You can reach me by phone at 1-403-289-3856, by packet at VE6YYC,
or by email at wederj@cuug.ab.ca
Thanks and 73 from VE6VOX...

One source you can try for obtaining manuals for your Singer is Tucker
Surplus @ (800) 527-4642; they've carried surplus SPA-3000s in the past &
should have manuals (or reproductions) available. However, you may find
their price for the manuals to be a bit high.

A possible alternate manual source you can try is Ed Matsuda. He might
have a copy, but since he specializes in HP & Tektronix manuals I can't
guarantee he'll have a copy. Ed's address is -

Ed Matsuda
P.O. Box 390613
San Diego, Calif. 92149

Also, that SPA-3000 should be able to get down to 10 MHz rather than 100
MHz, unless it's been modified somehow.

Good luck -

TGB

3202. Subject: Alinco 110 help

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-19 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <3085ECCA@smtp>
Source record: 211166

The Alinco 110T and the 1200T (they are almost identical) have a power-on system using solid state devices. If you open the 110 and holding it in front of you, you will see that just next to the power on switch is a Solid state switch (a black large TR looking device with 3 pins on one side and one on the other). You can have replace it, or better, jumper it out of the circuit(I did this).
My radio now powers on when the 12V is there, not when the power switch is pressed on.

Hope this helps,
Peter, kc1qf

Hi, I recently bought an FT530, I also modified it for extended rxcv, however, the 900 mhz band does not rxcv as it does on a friend's FT530. The frequency is displayed but squelch never breaks nor can you hear anything when no squelch. Yaesu service says after lot 20 of this model the unit will do this. Does anyone have a similar experience or know how to rework the unit to rxcv in this band?. thanks.

3210. Have you used COMER COMMUNICATIONS "DSP100" rig?

Perhaps the GPS clock is displaying astronomical time. According to my
Heathkit clock, there's a large fraction of a second difference between
astronomical time and UTC. I believe a leap second has been scheduled at
the end of the year to bring them closer again.

3214. HT's DTMF Tones Affected by RF: HELP!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-19 00:00:00 UTC
From: andy@clark.net
Message-ID: <465dr8$e01@clarknet.clark.net>
Source record: 211237

Can anyone suggest a solution to this problem: I have a Standard C-288A 220 MHz HT. Using a rubber duck, or even an AEA Hot Rod antenna, there is apparently some RF getting back into the rig which affects some of the tones on the DTMF encoder, namely 3, 6, 9, #, A, B, C, and D (in other words, the right half of the pad).

While the tones sound fine to the naked ear, they do not activate the decoders of three separate repeaters here.

The problem occurs only in the hi-power position. Using low power, all tones work fine. Plugging an earphone into the HT will also help, as it acts as a counterpoise and bleeds off much of the RF. An of course, using an external antenna works fine too.

The rig just came back from the service center where they confirmed that everything is right on frequency, and the deviation is properly set. I suspect they used a direct connection between the HT and the service monitor, and thus were unable to analyze the tones when transmitted using a rubber duck.

Any suggestions for a permanent cure would be appreciated. Perhaps there's some sort of capacitor thingy I can solder somewhere?

Many thanks!

Hi Mark,
At least he seems to understand the FAQ, eh? Gotta give him credit for
that!

I'm a Novice at newsgroups, so I'm trying to get a handle on what's good
practice and what isn't. I hope you don't mind my asking for expert help
on a puzzlement I have.

I understand you to say the analogy that applies to the mystery man is he
"is the same as someone making comments on the air without ID'ing", and
that makes sense.

What is the analogy I should use to understand someone that posts wants or
sales to a newsgroup where the creation of the group was specifically done
to avoid that type of thing? Would they be the net equivalent of "Lids" ?
Or is going outside a newsgroup's published FAQ guidelines OK?

What about people that call other people nasty names? Is there an analogy
for them, or is that also acceptable in newsgroups?

Thanks and 73, Tom

3216. Is IC706 a good radio ?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-19 00:00:00 UTC
From: dixsau_d@neon.epita.fr
Message-ID: <465lvt$77s@boson.epita.fr>
Source record: 211239

Hi all,

Here in France we are starting to hear about the new IC 706 multi bander from ICOM. It will soon be available for sale. Some friends of mine are thinking about buying one.
So the question is: is it a good or bad radio ? I mean has it got a good selectivity on HF and good sensitivity on VHF ?
For example could it be compared to a TS50 om HF and a TM255 on VHF ? Can it be used on a large HF antenna without any problems (receiver oervload...) ?

Many thanks in advance from Damien, F1LQJ.

That's always been my thought, but I know a ham who has one and thinks it's great. He uses it at ham fests where he does not need to communicate very far. It makes the ht shorter and when you clip it to your belt, you don't bump into the antenna all the time. So I guess it's the perfect ham fest antenna.

They work as a pair and probably are now unbalanced. Better to change tubes now.It doesn't really cost that much. you can get matched pair tubes if you really
want to do it right (about $10 more).

3220. Jimmie "The Tube Man" Hawkins - What to do in this situation?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-19 00:00:00 UTC
From: grauzer@aol.com
Message-ID: <465r1u$3k3@newsbf02.news.aol.com>
Source record: 211243

In an effort to save some money, I bought EL34 output tubes from Jimmie Hawkins, usually a seller of ham radio tubes at Southern California swap meets. I received the tubes mail order, having been told they were new. The tubes were blackened at the tops, clearly had been used, and when I called him, I was told that they are new, but I should try them, and if I don't like them, to return them and I'd get my money back. I tried them, blew fuses in my amp, and sent them back. He told me I had blackened the tubes, he could no longer sell them and sent them back to me. Have any others had problems with this guy? Perhaps at this point, the most I can do is tell others to be wary when dealing with him, so that someone else doesn't also get screwed.

>
>
>
>Zack KH6CP/1 zlau@arrl.org

Sure, you could use a pair of 3CX800's. But the screen, control, and cathode circuitry woul all have to be re-designed! Now the end user is not only faced with correcting voltage and current levels from the supply for all the elements, but has compounded the problem because the basic circuitry surrounding the tube is completely incorrect. That very likely would require gutting the cabinet (with the exception of the output tank and HV supply) and starting over.

I didn't mean to give the impression the Russian tetrodes are a bad tube or a bad idea. I simply question the long term merits of saving a hundred bucks or so over 3CX800's when the effort required to convert to something else in case of vendor difficulties is complicated by the fact the original tubes were tetrodes!

Regardless of advertising and marketing propaganda, *ALL* tetrode's require more complicated circuitry for proper tube protection and operation. Tetrodes are much less forgiving of improper tuning than g-g triodes, and this applies both to the tube's life and the distortion produced.

I've really heard nothing from end users one way or the other about that tube family, but my *personal opinion* is it would be MUCH more attractive long term if it were a socket and voltage equivalent (for example, the socket is unique and single sourced) for a common triode like the 3CX800A7 or 3CX1500A7.

Given their popularity, availability and low cost per watt, I don't understand why anyone would buy an HF amplifier with tubes other than 3-500Z's. At somewhat lower power levels, 811A's are also a good choice, for the same reasons.

Is there some benefit to the use of expensive tetrodes and ceramic triodes that I'm not aware of?

73,

Jack WB3U

Try the ftp site at oak.oakland.edu
There are lots of mods for a zillion rigs in the
/pub3/hamradio/mods/icom directory

One of them involves putting a diode (SMT) onto the board. They suggest
a particular diode and give the part #. I have been unable to find
out if the orientation of the diode is one way or the other and even
if it's a signal diode or some other.

Good luck.

Well, we do now. After reading previous posts on this subject, it appears that MFJ may not be quite ready to ship the units. But that's ok; pre-production advertising is really not that uncommon, providing the consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP fans. However, I am a bit surprised at their choice of bands. After having produced a 20 meter version, I would have guessed that a 10 or 15 meter unit would be next on the list, given that there may be a bit more activity on these bands.

From: diaguila@firnvx.firn.edu
Message-ID: <4668lb$4ru@news.fsu.edu>
Source record: 211251

After being out of amateur radio for 20 years I've decided to jump back in. I've found a TS-820 for about $200, and assume it's a good price. Any info good/bad about the unit? (or other suggestions)

Thanks.......

Paul

3229. Re: W2a audio going down (was: HELP - Icom ICW2A Speaker Connection)

>Seems as though it is fine when first turned on, and then when it warms up
>(either by transmitting,- warms up quicker, or just listening - warms up
>slower) the audio goes almost dead.. It comes back on and then goes off
>again, going from this loud to soft without touching the volumn control!!

Repairing the W2a is easy (I did so several times), though diagnosing
is difficult. Before you open the unit, do some tests like:
- really verify if the problem is both VHF and UHF
- Connect external speakers to both jacks and test again.
- Does a quick powerdown/powerup restore audio levels?
- DO you notice distortion?
It may be a capacitor going soft, but then again, it may not.

I do NOT recommend working on the unit if you can't take ESD precautions,
if you don't have the maintenance manual, or if you are unconfortable
working on 0102 SMD's. And remember NOT to transmit if the casing
is not installed (the back side is the cooling).

Diagnosing is difficult. ICOM has service jigs, but the rest of us
mortals are not that fortunate.

YAESU FT-51R Handheld (High power verses low power battery)

You may also forget that ON RECEIVE, the high power (5watt) FNB-38
battery also produces twice the speaker audio output than the lower
power FNB-31 battery.

Higher Output power and louder speaker audio make the FNB-38 a better
choice.....

Need service manuals for the following 1970s vintage Motorola radios:

Mocom 70 model U51BBN3100A 42-50 MHz, 60W, 4 chan

Micor T71RTN3400A 42-50 MHz, 100W, 4 chan
I also need a control head for the Micor...

Will pay reasonable copying/mailing.

Check out the latest (in Sweden anyway ;-) issue of QST. There was a
patch antenna design worthy of McGyver - two pieces of aluminum & a
connector. With 10 feet of RG-58 the signal strength was about the same
as with the original antenna, about 3 dB higher with short feedline.
I'm building one of those soon - can't get much simpler!
Good Luck

Hi Jack,

Like many things there are both pro's and cons, so it's up to the individual to make his choice. But let me add a disclaimer here.

My initial points were made in correcting a posting error, they were not in reference to the 91B. They were: 1.) The tube was not an Eimac, and there is NO direct replacement available from Eimac or anyone else. 2.) Understanding how tubes are built, I don't understand why Svetlana doesn't just make a hi-mu triode equivilent of a USA triode. 3.) By the time the correct bias, screen, and input circuits are added, the cost advantage of the cheaper tetrode all but disappears. 4.) Tetrodes generally have more critical operating parameter requirements than triodes, and for the best performance require carefully regulated and current limited supplies for the screen and control grids.

Ceramic tubes have a better envelope design. They offer better seals, cooling, and (generally) more stability. Ceramic tubes also take up less room. Glass tubes generally cost a bit less and require less complicated cooling systems.

In amateur service, grounded grid high-mu triodes have become the mainstream choice for very good reasons. The gain is correct, circuitry simple, component count low, operating voltages and adjustments less critical, manufacturing costs low, etc.

Tetrodes offer higher gain or improved load to driver isolation, when required (usually non-Ham applications). But even with these requirements, it's a close call deciding whether to add a g-g pre-driver, or to add the screen, bias, and other additional circuitry the tetrode requires.

Don't know what you're talking about. I have my RS DSP filter hooked to my HQ-110. It is worth every penny. I have had great success in chopping out bothersome heterodynes and getting excellent CW selectivity. When used with the HQ-110's onboard Q-multiplier, the selectivity effect even becomes more pronounces. And if I don't want the DSP in? Simply switch it out. I like my DSP unit. 73's, all. Maybe the same reason why people buy cars that can go 100 mph
when the speed limit is 55 mph--they want something that will
easily deliver more than 1500 watts, even though they never
intend to run it that hard.

Thus, if you end up living in the Colorado Rockies where the
air is thin you don't run into problems trying to keep the tubes
cool...

The 4CX800/3CX800 also have a lot of gain, so you can also back
off on the exciter power, so it isn't running full out. Running
gear at reduced output is quite popular in remote areas where
spares/replacement parts are costly to obtain.

Finally, people who carry amps aboard airplanes for DX-peditions
certainly appreciate small, compact amplifiers. While the size
of the tubes help, I think the lower plate voltages also contribute
to meeting the need.

Nope, I still disagree. The main purpose of the DSP unit is to use a computer algorithm to create a "transfer function" that will knock out interference (such as the heterodyning). Modern transceivers are still susceptible to such types of interference. For instance, we can perceive a heterodyne as a "constant unchanging signal" while voice operation is obviously dynamic. Try putting some voice traffic near a carrier and see what I mean. Then switch in the RS DSP. 73's. Cal.

A simple substitution of a 6146B for a 6146A will not result in any
[substantial] increase in output. It will probably just last a little longer.

But, you can crank up the screen voltage (and even plate voltage) on the 6146B
a little and then then you can [safely] get a little more power compared to
a plain 6146.

6146W is simply a [mechanical] ruggedized version of the plain 6146. Intended
for stuff like mobile operation, etc.

>I was wondering if anybody out there knew anything regarding Military
>Communications Standards. The spec sheets say that it meets MIL-STD 810
>c,d and E. It has methods and procedures listed.

MIL-STD-810 is not a Communications standard. MIL-STD-810 is the military standard for "Environmental Test Methods and Engineering Guidelines". It is a large document - appears to be 300+ pages. The revisions C, D & E have numerous differences.

What the manufacturer is likely saying by referring to this standard is that the equipment is mil-qualified (i.e., tested) to some specific environments. This could be full mil-spec temp, humidity, etc. testing or it could be minimal testing for commercial-off-the-shelf equipment - all depends upon which tests are referenced.

If you need to know more, then you need a copy of MIL-STD-810. I don't have an address or phone number for you, but would guess that it shouldn't be hard to find info for the U.S. government printing office or the Department of Defense.

Source record: 211191

I've been down a few days, so it took a little while to post this.

I sent the "To the cowardly little net cop" message.
I posted a "for sale" to this group and the wretch
stuffed my mailbox full of filth using an anonymous remailer.

I don't apoligize to him; I did and do mean every word I said to him.

However, posting it here just because it's the only way to get the
message to the little sneek was inapproriate. I lost my temper
and I apoligize to the group for that childish display.

I will say this to the (thankfully few) wanna-be net cops. I knew
the charter of this group requested no "for sale" here. The first
time I did it, completely unaware that it was unwelcome, I received
several messages demanding and ordering that I not do it again.

I was not born to be intimidated by petty underlings. So I made
a point of posting "for sale" to this group every time thereafter.
Finally, this last time, *one* person had the common decency
to tell me in a civil manner "Our charter doesn't allow for sale
here. Please take it to .swap." This simple, decent request
from one user to another is all I could have asked for.
I can and will respect such a request and will no longer post such
messages here. You who would impose your will here
should take a lesson.

I again apoligize to the group for allowing my outrage to be
inappropriately expressed, and can only plead my humanity
in my defense.

Sincerely,
D. Stinson

>Harry
>WA4VTV

I bought mine last spring and use it a lot. It's been the difference between being able to make out what was being said and a noisy mess on many occasions. It won't put signal where none exists, but it's very good at blocking out adjacent signal squeel on ssb and really does well knocking down the static and crashing on 75m during the summer.

With maximum processing in use you will not get high fidelity voice, but you will be able to isolate that voice and tell what is being said. Sort of like listening to someone with a lot of voice compression.

The NIR-12 has so many processing options that you can almost always adjust it to get an intelligible audio signal. Just goes between your rig and an external speaker.

Good luck,
de Jim, N4SVZ

3255. an HT from Hong Kong?

Folks,

I'm new on the amateur radio scene and need some advice. I'll be going to Hong Kong soon and am interested in shopping for an HT. What can you advise me about:

* Brand
* available frequencies
* legalities
* costs

Even if you don't know anything about "export only" HT's or Hong Kong, I'd appreciate your responses about Brands and costs. I'm planning to spend about $400-500 in HK on such a unit.

I've got friends who will guide me through the licensing process and hook me up with the local Ham groups (Bay Area). I intend to go legit and certainly wouldn't want to break any laws by importing something with extra frequencies ;-)

Imagine, though, that you could pick up anything available in the $400-500 range. What would you get?

Thanks,

Mike

>to Hong Kong soon and am interested in shopping for an HT. What can
you
>advise me about:

I'd save myselft the trouble and buy from a stateside distributor, I've heard of guys buying overseas HF gear with features or bands not avail. in U.S but I've never heard of any great bargains. What you save by shopping Hong Kong may cost you quickly if you have a problem or need an accessory for the radio.

I have a Kenwood Dual band HT and like it alot.

Brett....

First of all, congrats on your ticket & welcome to the hobby!!!

You do realize that you can start using your HT and new callsign right away, don't you? To find your new callsign, point your WWW browser at http://www.ualr.edu/doc/hamualr/callsign.html and perform a search on your name. You're listed there with your new call....if you haven't got it yet, I don't want to spoil your anticipation! You can also call the FCC, they will tell you your call.

Secondly, I also have the Icom ZIA, so perhaps can help you out...

... The keyboard mod you described opening the RX is correct, most dealers, and ICOM as you've discovered, will give this out for the asking. I've been told it is a 'keyboard' mod & not default due to various governments that frown on having radios capable of receiving wide-band (scanner) frequencies....True or not, I'm not sure, just passing what I've heard.

... There is a hardware mod for that HT to open up TX to 130-160MHZ, and 400-460MHZ. You must remove D15 on the main logic board, which requires extreme skill with a soldering iron - its the size of a pinhead. Please email me if you're interested & I can guide you to the location of this component.

... No mod exists for this rig to open it up to 220....unless you want to redesign & replace many components to alter the VFO & related circuitry. Just not designed to get there.

... Even though the keyboard mod you performed for expanded RX displays 800-900MHZ, you will not hear very much there (cell phone band) because it is blocked in the USA version of this radio. Its now illegal for dealers in the US to sell radios easily modified to receive this band....a more complete discussion can be found in rec.radio.scanner.

... The RX mod also opens up the AM aircraft band, but I've found the performance to be weak when compared with cheap scanners covering the same frequencies. YMMV

... Go get yourself a decent rubber-duck antenna, the one that comes with it isn't all that good (really none are, but if you use the duckie, invest in a better one - they're not that expensive). You'll also want a second battery that will give you the full 5W out, or for fixed operation a power supply capable of 2-3 amps continous output. And by all means, start thinking about antennas you can build and put up (for pennies I might add) that will get your signal 'full quieting' on the repeaters, let you do

some simplex, or even DX when the conditions are right! I'm sure local hams around you will be glad to suggest many different, great designs...or check out rec.radio.amateur.antenna. for ideas!

Have fun, email me with any questions about your Z1A..

Source record: 211114

Hello, The Michigan Technological University Radio Club is looking for some info on how to do a hardware reset on a RC-1000 repeater controller. Our problem is that our processer is not recognizing any of the "D" commands. The system is reading back all the dtmf digits using the readback function which tells me that the decoder is functioning properly. It will also accept the D7b and d7c programming codes properly but not any others. Perhaps this could be because the code that our manual says is supposed to come up D62 for the program code is not right?! If anyone has any answers I'd pay to hear them, otherwise I'll be forced to trash this controller. I've tried calling M.C.C. and they are out of business.
Thank You,
Rob Hall AA8LA

andy (andy@clark.net) wrote:

: I think these little cheapie SSB/CW rigs are a great idea for the QRP
: fans. However, I am a bit surprised at their choice of bands. After having
: produced a 20 meter version, I would have guessed that a 10 or 15 meter
: unit would be next on the list, given that there may be a bit more
: activity on these bands.

Perhaps... but in the US I don't think they would find a larger untapped
market than the bajillions of new no-code techs itching to try something
other than 2M fm!

Ten Tec has the best thing going with their $100 transverter kit. Since
most of these new folk don't own a 20M rig need to "drive" the 6M
transverter, MFJ has stepped in with a reasonable alternative.

The only question is, what took SOMEONE so long to come up with the
alternative to the more pricier, albeit feature packed, japanese 6M
gear?

3267. Need help with ignition noise problem...

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-21 00:00:00 UTC
From: mlazaroff@delphi.com
Message-ID: <xBLFQPE.mlazaroff@delphi.com>
Source record: 211117

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

73, Mike KB3RG

Hi Andres,

1. The internal fuse should be replaced w/ a 5 amp pico type fuse. It looks like a resistor.

2. You can add a PL option (Comm Spec TS-32P) but it is fixed to 1 CTCSS tone and is not programmable from the keypad.

3. The top "tone" setting runs the receive audio through the optional CTCSS board.

4. All of this information is available from Yaesu technical support. They even have a sheet that shows how to install the optional CTCSS board. The FT-708R owners manual is available from Yaesu and it includes all of the above infomation. (310) 404-2700.

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part
inside the tube known as a "getter", and it flashes and burns up any stray
gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a
bad tube. If that's what you have then yes, they're no good.

> If the offet is adjustable, does the sidetone track it? What about spotting
> provisions?

I've had one of these for about 18 months, and I use it almost exclusively on CW. My overall opinion is that it is an excellent CW radio -- but despite that there are still some areas in which it could be improved. Nevertheless, I think it is the best CW radio in its price class; I've compared it to the Yaesu FT-990, and my conclusion is that the Yaesu has a better user interface, but the Kenwood has superior performance, particularly in its selectivity.

In response to your questions:

* Full break-in is quite usable. There is a small amount of element truncation, but it isn't serious; see the QST review for the scope photo. I've been told it sounds fine on the air, but I use the compensation adjustment in my keyer to add 5 msec to the elements. Note that the radio doesn't have first-element truncation, but all-element truncation. This is actually an advantage because this means lengthening all of the elements uniformly fixes the problem -- and this is exactly what the compensation adjustment does.

* Filtering options are excellent: there are provisions for two filters in the 8.83 MHz IF and one filter in the 455 kHz IF. I use a matched pair of 400 Hz filters that I got from IRCI; they work very well. Someday I will get an additional 250 Hz filter for the 8.83 MHz IF. Meanwhile, the slope tuning allows me to narrow the bandwidth down as much as I like, at the cost of some blowby with very high strength interference.

The main problem with the filtering is the user interface: switching from wide to narrow filtering requires two button presses (assuming you have two narrow filters), but switching from narrow to wide requires SIX! Kenwood could have done much better in the user-interface design. There's a project article from QST a few years back that describes how to build an add-on box with one-button filter selection; it's programmable so you can choose filter selection and slope-tuning settings, then reselect them later with a single button press. This fixes most of the trouble with the interface, but it will

cost about $75 to build it.

* Offset is adjustable from 400 Hz to 1000 Hz in 50 Hz increments, and the sidetone tracks it. This is adjusted by a front-panel menu that is very easy to use.

* Spotting is done by disabling break-in and keying the rig, which keys the sidetone without transmitting. Not as nice as the Yaesu "spot" button, but usable. Again, this is an area where the user interface design is lacking.

Not necessarily. Other things have to be correct before this is a valid test.
In fact, most (yes, MOST is the proper word) of the rigs I have seen that used
the 12by7/6146 lineup aren't aligned properly and don't have enough drive to
reach normal output power on 10m. Further, most people don't tune them
properly.

-IF- you have good ALC showing at all times while tuning, AND you are tuned
properly for maximum output (and should also be properly neutralized), the
above test should work as a good indicator, assuming proper alignment.

Have you replaced the distributor *cap*. Often, carbon tracking
in the cap is the source of ignition noise. (Of course this could
be one of those engines with no distributor, but it's worth a shot.)

>necessary to interface the RTTY unit to a dumb terminal? Any help would be
>greatly appreciated. Follow-up here or by E-mail.

Remember, you are dealing with 5 unit *Baudot* signals. The dumb terminal probably only speaks ASCII. Now if you want to do ASCII RTTY, you can probably make this work, but you won't be able to communicate with the more numerous stations running Baudot RTTY. Baudot RTTY is normally done at 45.5 baud (60 WPM) while ASCII RTTY is normally done at 110 baud. That means the loop constants in the slicer of the ST-6 will be wrong and will need to be changed for best results. As to the interface between the dumb terminal and the ST-6, if the terminal is old enough to have a 20 ma current loop interface, you're set. Just wire the current loop. But if your terminal is newer than that, you're going to have to build a circuit to convert from current loop to RS-232.

I expect you really want to be able to do Baudot RTTY. In that case, you need a *code converter* between the TU and the terminal. There used to be one in the Handbook, but I haven't looked for it in recent editions. This is a single chip microprocessor programmed to convert between Baudot code and ASCII via a lookup table. Such things have fallen out of favor since the advent of cheap PCs. You can do the code conversion in software inside a PC.

The ST-6 is a great old TU, and works well on standard 45.5 baud Baudot RTTY, but I think you're biting off more than you want to chew trying to get it to talk to a dumb terminal. You'd be better off scrounging an old PC for the job.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so this test isn't very useful for transistor rigs. Your symptom could be the result of reduced PA gain, due to an internal emitter ballast resistor failure, but it's probably another cause. You might check the bandpass filter switching in the rig for the two highest bands. And you might want to look at the drive level from the low power stages. A hint to where the trouble may lie would be whether this condition appeared suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing power foldback due to VSWR on the two highest bands. Are you testing into a known good dummy load? No tune rigs won't work well at all using a lightbulb for a dummy load. It's not even close to their design output impedance. Lightbulbs work fine as crude loads on the older rigs with tune and load controls, but not on the no tune rigs. They have to see the right impedance, or they'll foldback power.

3289. Re: 6146b neutralization---what does it do?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-22 00:00:00 UTC
From: Floyd Sense <sentek@nando.net>
Message-ID: <46c4tv$g3v@castle.nando.net>
Source record: 211125

The purpose of neutralization of any rf amplifier stage is to balance out effects of the grid-plate capacitance coupling in the amplifier. One of the effects of an un neutralized amplifier is the possibility of the stage breaking into oscillation. I suggest that you follow the neutralization procedure described in the transmitter manual. It's not a difficult thing to do.

3290. Re: Kenwood TS-820

Newsgroup: rec.radio.amateur.equipment

From: Floyd Sense <sentek@nando.net>
Message-ID: <46c59q$g3v@castle.nando.net>
Source record: 211126

The price is good. Wonder if it's a TS-820S with the digital readout? The digital readout circuit board was troublesome with poor solder connections and often requires some work to make the display function. You might want to contact Internation Radio in Port St. Lucie, Florida. They used to publish a Kenwood Users newsletter and used to sell a collection of the newsletter articles that dealt with the TS-820 specifically. There were a lot of shortcomings with the rig, but the suggestions in the newletters go a long way towards making it a very good rig. There was also an article or two in CQ or QST in the early eighties. One of them dealt with adding the WARC bands to the rig. Not for the feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Even though I specifically asked Mr/Mrs Anonymous Not to reply, he/she
sent the faq to my email box (anonymously) and never answered my question
about posting a "wanted" message for a manual. Fortunately, some one else
who is not in hiding gave an answer. It seems that it's OK to post a
wanted message for a manual, but not OK to post a wanted message for the
radio the manual was written for. Doesn't make sense to me but if that's
the way the newsgroup is run...

As for the person that won't identify
him/her self: Posting anonymous messages only makes the situation worse,
and is NOT in keeping with this group's purpose; Discussion of equipment.
An interesting situation; Don't post FS or WTD, 'cuz it's not what
the group is for, but do post anonymous messages telling people not to post
FS or WTD. Nah... No one is really that that mentally challenged.

I would agree. Comparing my 17M Mizuho with the pictures and specs for
the AEA radios (from old CQ), they seem to be identical.

Incidentally, Ramsey still had a few Mizuho's a few months back, which is
where I picked up mine. Choice of bands was very limited, accessories non
existent. They bought out the remaining stock from J-COM.

Disclaimer: I have no ties to Ramsey whatsoever.

I know of no mod personally, but I am curious as why you would be interested in being able to access below 118Mhz. Air band comms start at 118Mhz, below that are the Localizer and VOR frequencies. All you would hear there are CW idents. Transmitting there will bring the wrath of the FCC, FAA and others.

: messages then most people will try to respect that. But, IMHO, we
: should not get overly up-tight when new user posts a FS before they have
: seen the FAQ or every time someone sends an accasional ad.
: In fact the respectful thing to do would be to send the poster a polite
: e-mail message saying that this is not the proper group to post FS on.
: Flaming the poster on the news group is just a waste of bandwidth.

Good job, Mark; very well said. Flaming the poster on the newsgroup only invites more flaming and prolonged discussion. I would say that most of us who have taken the time to read the FAQ and read the newsgroup to get a "feel" for the temperament of the group, will respect the charter. A lot of this problem arises with the prevalence of a lot of newbies on the net, particularly from providers like AOL and Prodigy, ISPs to the great unwashed masses. Those of us who have been around the net for a while know automatically to look for a FAQ or charter when visiting a new newsgroup.

: If rec.radio.swap has become to full of non ham equipment, and most
: people can't get rec.ham-radio.swap then maybe a new group should be
: started. And maybe until it can be started we could relax a bit and let
: the ham FS posts be put here. They are far less annoying than
: anonymous
: posts from gut-less wonder wanna-be net gods. But hey, this is no
: different than being on the air. We can find lids anywhere.

I suggested starting a new group, maybe rec.radio.amateur.forsale awhile back, for a couple of reasons. First, the .forsale naming convention fits a pattern common among newsgroups. Second, the .swap name, while it fits well with the concept of a swapmeet, is not as intuitive as .forsale, as to the purpose of the newsgroup. Also, rec.radio.swap suggests that any type of radio equipment can be bought or sold, not just ham radio gear. I would like very much to see a new group created in the rec.radio.amateur hierarchy that was confined to buying or selling ham radio gear and closely related items only. In other words, if it is not used to facilitate or maintain the operation of a ham radio station, it does not belong there. For instance, test equipment would be OK, since it it used to maintain the equipment. Similarly, tubes, parts, antennas and the like would also fit in well.

Hoping to keep a group that organized is a dream, unfortunately.

At the time that I made the proposal, I received very little response, so I doubted that it was worth the time to go through the formalities of the RFD

and CFV processes necessary to create a new newsgroup. This was probably due to the fact that the thread was getting pretty tired by then, as is this one.

While the original poster here was polite with the request and followups, I resent anyone trying to control this, or any other newsgroup. Unless the group is moderated, it just is not the "net way." A cowardly posting from an anonymous site just made a bad situation worse.

Subject: IC-706

Yes,
The rig does QSK, break-in CW, 250, 500hz cw and narrow SSB filters
for the IC-706 are available from Icom.
The rig works comparible to the Kenwood TS-50, it's no
FT-1000 from the standpoint of IP3 intercept point, but neiher
was the TS-50.
It a great rig for mobile, instalattion's with verticals and dipoles,
If you put it behind a 5/6 element 20meter beam in a contest, you may feel
you need a better SSB filter, but the TS-50 was the same way.
It has an RF and IF attenuator to keep the IF from getting saturated
in a strong signal band.
It will overload , my TS-50 also did overload, i.e. 80 and 160 meters, but
when I used the Kenwood AT50 Antenna Tuner with the Kenwood TS-50, it was pretty
good.
When I tried the Icom 706 HF rig with my extenal Kenwood AT-50, It remained
about the same as the TS-50, no real complaints,
These small radio's have a lot of IF gain to remain sensitive for mobile,
small antenna situations. If you put the Kenwood TS-50,IC-706, and Alinco
DX-60 on Antenna's with about 10dB gain, they start to saturate the IF, and
that's were the 10dB are need Attenuators come in.
If you saturate the IF on any of these Radio's, the Noise Blankers
act differently.
If your after a high level intercept radio, for a low price, the Yaesu FT-900,
seems great, I have one. If you have more money, a FT-1000 is better.
It really depends on you activities, if your a DX chaser, the TS-50,IC-706,
and Alinco DX-70 may disapoint you. But if you the average ham with a diople,
mobile antenna, or plain vertical, It seems to be a good radio.
Only real thought is the audio is not that great thru the tiny Speaker, but neither was my
Kenwood TS-50.
```

If your looking for an FT-1000 , 130dB Dynamic range with a $30,000 Spectrum Analyzer similar to Hewlett Packard, then I suggest you buy an FT-1000 and a $30,000 Spectrum Analyzer.
For the Price ~$1250, for the average ham in portable, small Antenna operation, its good, if your expectations are of a $2500 -$4000 DX rig with Spectrum Analyzer, then look elsewhere!
I would recommend the external Tuner AT-180 with the IC-706, but so far I have not seen one out yet in the stores!
Also the General coverage is 30Khz to 120Mhz. Icom has got alot of heat about its initial statement of 30KHz to 200MHz. The Permance above 120MHz is lacking, untill you reach the 144-148MHz ham band, If your expecting a Police Scanner, aover 155MHz, do not, Icom purposely put in a narrow-band filter to kill the image response Image = 2(LO)-RF.good small SSB all mode for 2 meters/6meters as extra's withe the normal HF bands.
I would say the IC-706 works like the Kenwood TS-50 , but has extra's like 6meters, 2meters, hears 88-108 FM broadcast, aircraft AM 108-125 OK, and that for it's size, is a good radio for the mobile guy with little space.
I;e: Like when I go on vacation to remote area's, Alaska, the Yukon, mobile, its size is nice and I don't need to decide between the VHF radio vs HF, now I can carry both in this small package.
If you drive next to a 50Kw Am braodcast the TS-50, DX-70, and IC706, all went crazy with no external tuner, when we put on the AT-50 external tuner with each radio, each one was fine. We had an FT-1000 and FT-900 with no tuner and these were ok, with no problems on 160meter/80meters. I have not heard any intermod on 2 meters with a 7 element beam on it. I would imagine, If I bypassed the front end filter, it would be intermod/image city. But I wanted a d listen to 160meters, you will get overload(using no tuner), but my Kenwood TS-50 did this also, If you used the Kenwood Ts-50 withe the External AT-50, there was no problem.
Switching the TS-50 with the IC-706 , but keeping the Kenwood Tuner AT-50 In, the was no overload.
Using the IC-706, Kenwood TS-50, and Alinco DX-70 next to AM KFI 0.640 ooverloaded all three radio's (No Antenna Tuner). So it depends on what you want!!!!!!!!!!!! So for all you cheap hams, want a $5000 HF DX rig with a $30000 Spectrum Analyzer all for the LOW price of $1250, you will be not be happy, I can assure that to you, so keep your big, bulkly FT-1000's because performance (140db plus dynamic range, needs to seat in the car seat next to you, (worth it's WEIGHT in gold,etc) and that small size is not what you want. For other hams, the IC-706 is a great secondary rig for mobile, vacation's, run around town radio's. Pass this along on you BBS's to other hams. I got mine and I am happy with it so that all that counts for me. For the others that want everything for nothing, then your search continues (I.e.: like the meaning of life,etc), may never find the perfect radio to please you.

I'll let you know if it's worth fixing after I buy it from you and fix it
myself! :-)

Whether it's worth fixing is a matter of how badly do you want to have 6m
capabilities? I've heard the Swan is a very nice rig, but if you want to part
with it, let's talk. I know I can fix it. I'd better be able to; I've 15
years of electronic service under my belt.

So, what do you want for it? Now, be reasonable. There's no way in telling
how much money I'll have to pour into it.

Good point Zach,
The lower plate voltages really help. It enhances the ten meter
performance also, because strays are less important with a low operating
impedance. 73 Tom

Hi Cal,

It'll help a rx like the HQ-110, it helps my Heathkit Mohawk a good bit on
CW also.

But it doesn't do squat on my ICOM 751A. That's because the ICOM CW
filters are much sharper than the RS DSP filters, so all the crud is gone
before it ever hits the DSP. If I leave my ICOM on SSB, tune in a CW
station, and put the RS on CW narrow, it helps a lot. But not ever when
the narrow crystal CW filters are in line!

Of course the notch always works FB.

3313. Re: MFJ 6 Meter SSB/CW

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-22 00:00:00 UTC
From: leigh@rain.org
Message-ID: <46egas$2jl@news.rain.org>
Source record: 211149

Regarding the new MFJ 6 meter rig, is that extra CW module something that mounts internally or externally? Is non-QSK CW possible without it?

FWIW, I've had a lot of fun during the last 6 meter sporadic-e season, using an older Icom 502 QRP rig into a Cushcraft vertical. The 502 is a great little portable rig which can either use external 13.8v or 9 internal C cells. It puts out 3 watts of SSB or CW from 50 to 51 mhz, and I've worked 5 states and Mexico with it.

Source record: 211151
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.homebrew

I was in Hong Kong this summer, staying in the Causeway Bay area. I
was completely surprised by the number of authorized Icom dealers in
the city. It seems like most if not all camera/electronics stores
sell Icom. I saw some Kenwood, Standard, etc.
Prices were never ever posted- there were coded tags on the items, and
the clerk would tell you, or show you a calculator with the amount. In
my experience, prices were similar to here in the US, in most cases
higher in HK. Some observations:
1. They had a lot of older stuff- dusty in fact. 95 percent was at
current "high rent district" list price. One store, Wilson Camera,
8 Great George St, was giving decent prices on older gear that was
getting dusty.
2. Most if not a □□ll of the gear was in the Asian/Japan
models- 440 gear ran on 430, and there is a great tendency for
the extended recieve we see on US 2M gear to be disabled.
3. Prices as I say were about US or more.
4. There will be a real warranty problem, unless you ship
it back to the dealer in HK
5. I believe the hma radio dealers in HK cater to tourists, such
as the Japanese, who have high prices at home, and would
benefit from the lower taxes, etc. in HK.
6. I am not sure what if any ham operating is done in HK- in China,
there may still be restriction on private stations. In HK, I saw
a business (actually a Chinese dining room) running on Yeasu HTs
on 145.00 Mhz.
7. There were some odd and ends of other brands of gear, even at
the airport gift shop- brands I had not heard of.
8.
My big buy in 2 weeks a was an Icom BP24 I found in a pile of
older packs at Wilson. I paid $67US for it, thinking it was
the last one on earth. On the same trip, I bought a copy of CQ
magazine for $11.00 US and found Ross Distributing with the same packs,
price.

Would I go back- yes. Buy some gear- maybe. Fun place- I have never
been in more Ham Radio dealers in my life.

73,
Erik

Mike, since you are also in the LA area, I wonder if you have had a chance to evaluate the performance of the 6m/2m bands with your IC-706? One thought that I had was, even if the HF stinks, which is obviously not the case, where else can you get both 6 and 2 meter, all-mode, full-band coverage? If performance is good enough for weak-signal work on those bands, I would conside $1250 a reasonable price for the capability. Then if I did not like the HF characteristics, I would look to the IC-775DSP or FT-1000D.

Would appreciate your comments...Jim

3317. RU 188

I would like to know more about the use of RU 188 coax. I would like to insert a small length of it to connect to my HT when using a remote antenna to minimise stress on the connector an the HT. Is it possible to put connectors on RU 188 "at home"? I have seen a 1/4 wave mag mount antenna with RU 188 coax. Does anyone know if those work acceptably? I assume such small coax is not too efficient - experiences? opinions?

Thanks,

Jack

Harry,

Re: ur request for info on NIR-12. I've had the Radio Shack, Timewave DSP-9 and DSP-59+, NIR-10 and NIR-12 as well as a brief checkout of the MFJ unit at a hamfest.

Without a doubt, the -12 is the easiest to use and most effective of all that I've seen. The -10 and 59+ are close but not quite as user friendly or as effective as the -12.

Having said all that, I just noticed a Timewave ad last night in the new QST that announces a new DSP unit - can't remember the model but it includes an LCD display readout of unit settings. The two biggest features that I noticed were the user programmability (similar to the -12) and a super fast (claimed) processor. Presumably this will keep audio pretty clean sounding and allow for more complicated processing algorithms. Will have to wait for the jury to report on this one. Don't remember seeing 2 DSP chips mentioned.

The -12 is a joy to use and does a fantastic job on the heterodynes we get down here in North Florida and the atmospheric noise that comes with living in the Thunderstorm capitol of the world. I highly recommend it.

>How about $15000 minimum. USCG uses Harris.

I have no doubt Harris would start at $15k. The SGC price looks a little low (last I saw, they list-priced their ALE controller at $4.5k + transceiver). As far as FED-STD-1045/MIL-STD-188-141A is concerned, I'm not even sure that Rohde & Schwarz even make an ALE controller.

There are others of course (Sunair, Motorola, Mackay, etc.) - even the odd non-US manufacturer - my employer is an Australian company who also provides ALE equipment (at most competitive prices :-)). I don't want to turn this into a commercial, so if you want more info, email me direct.

> In the November issuse of QST and 73 magazines are a couple of very
> interesting RDF (Radio Direction Finding) projects. The projects are
> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my modified Atlanta kit. ;-)

I agree with Tim. I've been to HK several times on business trips and it is not worth the hassling of dealing with the salesmen over there (prices are not fixed and you have to deal, yes as in bargaining!). Also there is the problem of the warranty. I don't think any of the major brands (K,I,Y) honor warranties of any equipment bought overseas. What I have bought though are accessories. Bring your AES catalog to check the price differences. Some things are cheaper there but others are around the same or even higher depending on the store. Another suggestion is to get away from the Nathan Rd. stores, those are usually overpriced.

Have fun in HK.

Rafael (KE6JSR)

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Message-ID: <1995Oct23.150414.106322@kuhub.cc.ukans.edu>
Source record: 211017

I thought I might be able to restore the above after getting it in
a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened
it to find a corroded Alkaline 1.5v cell soldered in place. While
the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at
a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get
infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

dharper@kumc.wpo.ukans.edu

The main reason for neutralization is to prevent the tube(s) from oscillating. An additional side benefit is that it makes the point of maximum power output and minimum plate current the same. Otherwise, the tuning would be slightly different for each. Neutralization is almost always required for grounded-cathode amplifiers, and sometimes for grounded-grid too.

Not to be simplistic here, but can't you just turn down the volume on the VFO that you don't want to hear.. there are separate volume controls for each VFO...

Dan Brown (danb@a.crl.com) wrote:
: jlowman@netcom.com (Jim Lowman) wrote:

: >1) While rec.radio.swap is the correct place for such ads, it is not
: >specific to amateur radio equipment.

: From other discussions I've seen, this was intentional--amateurs use
: lots of non-ham equipment (Motorola UHF and VHF business-band radios,
: for instance). Most of the stuff I've seen in r.r.swap would be
: appropriate in a group in the .amateur hierarchy, either because (1)
: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that facilitates the operation or maintenance of an amateur radio station - would be "on topic." This could include, but not be limited to, test equipment, replacement parts, commercial gear that could be converted to operate on the authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became

aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

Jay Maynard (jmaynard@admin5.hsc.uth.tmc.edu) wrote:

: It's not a problem for you at Netcom, but I can guarantee that continued
: forsale postings here _will_ make the group go away at many sites.

I have to admit, I was unaware of this problem until late in the discussion.

: During the reorganization that produced the current rec.radio.amateur.*
: groups, it was proposed that the .swap group be placed in the .amateur
: hierarchy. The consensus was that that was a Bad Idea both because hams swap
: equipment that isn't necessarily ham-specific, and because folks other than
: hams swap ham equipment. The group's placement where it is was both
: deliberate and the consensus view.

Well, even after a year, things change. I started another thread, offering
to propose the new group rec.radio.amateur.forsale, which I will check next.

BTW, I am not proposing that we dump the .swap group, only that we create a
new newsgroup that would be used for buying, selling and trading amateur
geam and related items, such as test equipment, tubes, etc. I am not saying
that this is the only answer, just that we should examine the situation as
it exists today.

: I was in Hong Kong this summer, staying in the Causeway Bay area. I
: was completely surprised by the number of authorized Icom dealers in
: the city. It seems like most if not all camera/electronics stores
: sell Icom. I saw some Kenwood, Standard, etc.
I've visited Hong Kong several times and purchased a radio or two
on occasion. Let me compare/contrast my experiences.

: Prices were never ever posted- there were coded tags on the items, and
: the clerk would tell you, or show you a calculator with the amount. In
: my experience, prices were similar to here in the US, in most cases
: higher in HK. Some observations:
: 1. They had a lot of older stuff- dusty in fact. 95 percent was at
: current "high rent district" list price. One store, Wilson Camera,
: 8 Great George St, was giving decent prices on older gear that was
: getting dusty.
Yes. Amazing how old some of the stuff was. Actually worked to
my advantage in one case since I wanted a model that was no
longer available in the U.S.

: 2. Most if not a □□ll of the gear was in the Asian/Japan
: models- 440 gear ran on 430, and there is a great tendency for
: the extended recieve we see on US 2M gear to be disabled.
Major problem here. Watch out for versions of equipment that
are setup for non-US markets. Its not always easy to figure
out in advance, either.

: 3. Prices as I say were about US or more.
I'd give them more credit than that...but its not always easy to
tell the rockbottom price with extensive negotiation.

: 4. There will be a real warranty problem, unless you ship
: it back to the dealer in HK
: 5. I believe the hma radio dealers in HK cater to tourists, such
: as the Japanese, who have high prices at home, and would
: benefit from the lower taxes, etc. in HK.
Actually, I am not sure WHO they really cater to. The prices
I've seen in Tokyo are roughly equivalent to Hong Kong.
Exchange rate would influence this, of course.

: Would I go back- yes. Buy some gear- maybe. Fun place- I have never
: been in more Ham Radio dealers in my life.

Check.

: 73,
: Erik

: anything on my screen. I can go a ^C, and then 'c xe2xxx', and I will
: the the packets being exchanged, and the 'connect' LED will light up, but
: absolutely nothing shows on the screen. I've tried using procomm,
: Windows Terminal, and a few other dumb terminal programs with no luck.
: (Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)

Mine died like this a while ago. I sent it to PacComm along with
a signed note authorizing them to charge my credit card in an amount
not to exceed $45.00 + shipping. They replaced the serial port driver
and also, threw in a free driver rom upgrade which added gps to my
unit. They sent it back with a new manual as well. They charged
my card $45 + shipping. Either I am good at picking numbers out of
the air, or they did me a great favor, or it was a $10 job and they
made some money on me. In any case, I was happy with the result
and the service.

If you can figure out which chips they are, you might try replacing
them yourself. I believe they are U15 and U17, at least that is what
my schematic shows (dated 4/5/92). It did not appear that they did
any other work on the board, like capacitors, etc. Of course, if you
do it yourself, you won't get a rom upgrade (if available). Mine
was from the 1992 vintage, and the work was done in 1994.

Hope this helps.

3348. Opinions wanted: new newsgroup .forsale

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-23 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDGvoHu.IH8@netcom.com>
Source record: 211060

For those of you who have been following the lengthy threads related to the posting of "for sale" or "wanted to buy" items on rec.radio.amateur.equipment newsgroup: I would like to make a proposal that may solve the problem. While I am willing to do the legwork on researching the formalities to proposing a new newsgroup, I would like to hear some opinions, yea/nea votes, ideas, etc. before doing so, to determine if this action is warranted.

To summarize, there have been several posts, ranging from very curteous to outright flames, directed toward individuals or retailers who post FS or WTB ads on the newsgroup. This has caused the following problems (my ranking, in descending order of importance):

1) The fact that some sites prohibit this sort of posting, which threatens users at those sites with the possible loss of a very valuable newsgroup.

2) Repeated posts *on the newsgroup* chastising those who do post such ads, thus causing a high S/N ratio on the newsgroup itself. Besides the clutter, this causes unnecessary expense to those users who have to pay for connect time, or per-message charges, not to mention wasting time.

3) Such posts violate the charter of this newsgroup.

As such, I would like to see how many of you would be in favor of creating a new newsgroup, rec.amateur.radio.forsale. I feel that this would be a beneficial action for all concerned, for the following reasons:

1) While rec.radio.swap is the correct place for such ads, it is not specific to amateur radio equipment.

2) IMHO, the .forsale naming convention is widespread on the 'net, and is more descriptive than .swap.

3) Hopefully, we could guide individuals and commercial advertisers to this new newsgroup, thus restoring rec.radio.amateur.equipment to its intended purpose.

Feel free to submit your opinions, ideas or flames, either on the newsgroup for all to read, or by e-mail. If there is enough support for this idea, I'll get the process started.

For those who don't feel this action is warranted, or for those who feel that
they *must* play net cop, please contact these uninformed individuals by e-mail, hopefully with a polite message as to why they shouldn't advertise here. Let's put an end to this topic, one way or another.

For the record, I don't think posting of ads is going to stop, even with the flaming that is going on, unless there is a channel for advertisers to use. Consider the number of FS/WTB posts that have originated *since* this discussion began.

3358. FT-51R 15 kHz Step Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-23 00:00:00 UTC
From: rkmorrow@aol.com
Message-ID: <46fmv8$2of@newsbf02.news.aol.com>
Source record: 211070

When I set the step size to 15 kHz on the VHF segment, the step size refuses to carry across 100 kHz boundaries. For example, I key in 146.52 and step down one; result is 146.50 instead of 146.505. Now I step up one and get 146.515. This makes the 15 kHz step size useless. Anyone else get the same result?

I would like to add to this thread - I was there not too long ago and I got the feeling many stores were more "communications" stores. They had ham, two way, commercial HF, you name it. Whatever you wanted, whoever you were, they were happy to sell it to you. Perfectly legal, of course, as it would be in the US, as long as you didn't try to use it here, or in HK. I suspect the HK government keeps after toursts trying out their new toys before they leave!

I also found the HK shop keeper's to be the nastiest, most disinterested, discourteous S.O.B.'s I have EVER run into. It was so bad I asked my hotel manager what I was doing wrong. He said "probably nothing", adding "being Caucasian and wanting less than 10 of anything was not a good combination for many sales people; a serious problem in HK". All of this right after visiting Tokyo where the HAM (REAL ham) stores where SO polite and friendly I literally could not believe it.

I have the new FT-10, as well as a FT-51. As you said, the 10 is a bit bulkier,
especially with the high-power battery. That said, the 10 has great audio on both TX and RX for such a small speaker.

The most notable feature is digital coded squelch, which uses the same scheme used by commercial radios. Course, if you are not intending to use this feature, it might not be worth too much to you...

>
>Folks,
>
>I'm new on the amateur radio scene and need some advice. I'll be going
>to Hong Kong soon and am interested in shopping for an HT. What can you
>advise me about:

One thing's for sure - you will have a fantastic choice of radios! I felt guiddy every time I went shopping.

Every shop in Kowloon sells ham equipment, as well as walkmans, dodgy watches, tee-shirts, sunglasses, you name it, they sell it.

The problem is that there is no such thing as a ham only store (well I didn't find one in the four months I was there). So expert advice is difficult to get.

There are stories abound of people getting ripped off (especially in electrical shops), if it's anything to go by I didn't buy anything while I was there - the fantastic cheap bargins everybody hears about arn't there. The prices seem to be the same as in the UK (eg the newish Sony SW-100 was about 240 sterling).

Save your self a LOT of hassle and buy local - and start up a friendship with the local ham store owner - much better in the long term.

PS I use an ICOM IC2SA and an ICOM IC24SAT, both very reliable - long in the tooth but do everything that the latest all singing HTs do.

My IC2SA has extended TX/RX and even works on marine (156 and up) and Airband RX down to 115MHz.

Good luck in HK, an evening meal in the art-deco cafe on the peak is not to be missed, book a window table and enjoy the view (fond memories flooding back now).

>Your opinion?
>Does it perform as advertised?

It isn't a noise blanker, it uses a second antenna which is 180 out of phase with your main antenna and matched in level with the gain control. Since the second antenna is small (usually indoors) it picks up the noise, not the DX. (signal & noise) - (noise) = signal.

I have played with it in the lab at JPS and reduced 75 meter computer interference from S9+5 to S3! I also helped a guy who had the dreaded Ford fuel pump noise put one in his Crown Vic, he had similar results.

As you might have figured, I work at JPS. Not in marketing, I'm the Engineering Lab Technician. So, you can trust me. :)

It depends upon the application of the pair. Neutralization for a RF
power amp application is usually accomplished via a small capacitance
in the plate to control grid circuit. The technique is not dependent
upon the the particualr tube model in use. ie 6JB6's can be
neutralized the same way as 6146A , 6146B, etc.

For further info you can refer to most any old edition of the ARRL
Amateur Radio Handbook.

WoW did I miss this queston or what ??? I thought I read how instead of Why.

Anyway, neutralization is performed in rf amplifiers to prevent unwanted
oscillations. This event reduces useful output and leads to heating
problems. You can recognize the need for neutralization when tuning the
pair of tubes. Maximum output will NOT occur at the dip in plate current.

Oh well, sorry for not reading your post correctly.

I have a Icom IC-4SRA for sale. It is an HT with a scanner built in.
The radio side of the HT covers 430-490 MHz and the scanner side of it
works from 25-1299 MHz. It has 30 memory channels on the 440 side and 60
memory channels on the scanner side. The radio has all kinds of Bells
and whistles to it. I also have a brand new rapid chager to go with it.
The HT is in Excellent shape and I will sell it and the charger for
$375. If Interested leave message ot me @ mike.brooks@thefishnet.com

It's not a problem for you at Netcom, but I can guarantee that continued
forsale postings here _will_ make the group go away at many sites.

During the reorganization that produced the current rec.radio.amateur.*
groups, it was proposed that the .swap group be placed in the .amateur
hierarchy. The consensus was that that was a Bad Idea both because hams swap
equipment that isn't necessarily ham-specific, and because folks other than
hams swap ham equipment. The group's placement where it is was both
deliberate and the consensus view.

>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

"Didn't work" isn't very descriptive. What are the symptoms? These
rigs are pretty simple. You can certainly fix most problems yourself.
I wouldn't give up on it unless it had something like a fried power
transformer or some other part that's impossible to get from a now
defunct manufacturer.

This *is* amateur radio. You really should try to do more than
turn the knobs on the front. Fixing old rigs is a good introduction
to the workings of radio.

jlowman@netcom.com (Jim Lowman) wrote:

>1) While rec.radio.swap is the correct place for such ads, it is not
>specific to amateur radio equipment.

From other discussions I've seen, this was intentional--amateurs use lots of non-ham equipment (Motorola UHF and VHF business-band radios, for instance). Most of the stuff I've seen in r.r.swap would be appropriate in a group in the .amateur hierarchy, either because (1) it is ham gear, (2) it can be modified to work in ham bands, or (3) it would be used in connection with ham gear.

>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

.swap, .marketplace, and .wanted are about as common as .forsale. Construed strictly, .forsale neglects "wanted" posts (and vice versa). For accuracy's sake, .marketplace seems like the best choice, but I think any of the four is about equally descriptive.

>3) Hopefully, we could guide individuals and commercial advertisers to this
>new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
>purpose.

The same is true of rec.radio.swap.

>For the record, I don't think posting of ads is going to stop, even with the
>flaming that is going on, unless there is a channel for advertisers to use.

There is such a channel, though.

The only real advantage I can see to rec.radio.amateur.{swap | marketplace | forsale} is that it would put a group with the other amateur groups, while the r.r.swap is detached a bit in the alphabetical list. When I saw the list of rec.radio.amateur groups, I went looking for a for-sale group, but apparently others don't bother. I tend to doubt they'd bother anyway, but I'm rather cynical that way.

From: k5qq@aol.com
Message-ID: <46fi4q$re1@newsbf02.news.aol.com>
Source record: 211093

The Albuquerque T-Hunters were thinking the same thing about the two articles. Quite a few of us have dopplers and when we looked at the circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all
Jim K5QQ

Hams, the experts of modifications ...

Most American cars have a built in radio that has a tuning resolution of 0.2 MHz. All the steps are like 89.9-90.1-90.3 etc. no possibility to tune to frequencies like 90.0 or 90.2 MHz. At least in some parts of Europe the used channel resolution is 0.1 MHz. The mark of my radio is DELCO and the model I don't know right now, it is not marked on front panel.

Does anyone have experience on modifications if there is any reasonable to cover this?
How does it discord to listen a station having a 0.1 MHz offset on these 0.2 MHz resolution radios?
Do they have wider filters?

I appreciate if somebody can answer to these kinds of questions.

I think you hit the nail on the head. I suspect the big problem is that newcomers don't know about rec.radio.swap. It's not even in the same hierarchy as the amateur radio groups. Newbies come in, see the rec.radio.amateur hierarchy, see no forsale group, but see an equipment group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they wouldn't make the mistake. The Guide has lots of very useful info. Unfortunately, the Guide is some 200+ lines in length. I wonder how many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this would be far more intuitive for newcomers to figure out. Perhaps a short, weekly "charter of the newsgroups" message would be useful as well -- provided the author signs his/her/its name. 8^{)

Sense this mess started I have been paying more attention to
rec.radio.swap. Most of the post do seem to relate to amateur radio
equipment or at least to equipment that could be used by hams.

>
>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

I agree. The normal convention for such groups on the internet seems to
be forsale.

Also, as has been pointed out, rec.radio.swap does not follow the
rec.radio.amateur naming convention for newsgroups related to ham radio.
If someone is looking at a list of newsgroups. It does look like
rec.radio.amateur.equipment would be the place for fs posts.

>
>
If there is not a need for two such groups, maybe the rec.radio.swap
should be removed and rec.radio.amateur.forsale should take its place.

Thanks

Does anyone know where I can find a o.scope for a Tectronics 422 O.Scope?
The tube that is used now has lost it's intentsity. I can't find the
number of the tube anywhere.
Any help or suggestions would be appreciated!!! E-mail me with any info
please.

Thanks
Doug/AA0UF

3393. MFJ 1278 **Junk** for slow scan/wefax?

Newsgroup: rec.radio.amateur.equipment

I have an older model 1278 (v. 3.4 firmware) that I am thinking of updating to be able to use for slow scan/wefax. Anyone out there have any success with this monster for that? I don't want to spend the 75 bucks or so to get the firmware es software to do it only to find that it is horrible quality (which I have heard). Advice? Comments? Tnx es 73 Mike KS4DA

Do these use a relay to key the rig on CW?

3395. IC 706 - TX Audio problem?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-24 00:00:00 UTC
From: "Gregory J. Buhyoff" <buhyoff@vt.edu>
Message-ID: <46jak7$228@solaris.cc.vt.edu>
Source record: 210907

I have heard a couple of reports (one of them from an owner of the 706) of possible transmit audio problems on the IC 706. I am wondering if any others who own 706's have or had similar problems. The problem seems to revolve around constricted or "pinched" sounding transmit audio as if the person was speaking through a tube. This is interesting since HRO advertises the 706 as being 100% quality checked by ICOM America (see the HRO web page under new products). I am wondering if this is a rare problem or one which is more pervasive? Since there are many of us out here in cyberspace who are interested in the radio, responses to this inquiry here, on this net, would be most appreciated.

>Kam Plus (the split window features look intriguing and useful.)
>Does anyone out there have any comments or opinions on how useful
>this piece of software is, or if there is better software available
>elsewhere?
>
I've been using Hostmaster with my KAM for several years and am quite
happy with it. The whole point of my getting the KAM in the first place
was to simultaneously work HF digital modes and monitor the DXcluster,
and I never found another satisfactory package to do that other than
Hostmaster.

As you probably know, it is a DOS-based program, but works well enough
in a windows environment and is reasonably friendly. Good luck!

From: pklein@handel.seattleu.edu
Message-ID: <46jecd$iql@handel.seattleu.edu>
Source record: 210911

I sent the following email to someone who was recently flamed here. I am also posting it to the group on the chance that it might make someone think twice the next time they want to flame.

>I'd like to take this opportunity to thank all who sent me tons of mail
>suggesting that I take my ad about the T-T linear to another list.

I was not one of those people, but let me apologize for them.

It does not excuse the behavior, but let me put it in perspective. Unfortunately, civility in our society has gone way downhill. Even the ham bands have degenerated significantly in the 26 years I've been a ham.

USENET may contain much useful information, and some very knowledgeable and interesting people. But its lowest common denominator of social skills and maturity is that of the junior high school locker room. When on-line people will say things that they would never dare say face-to-face. Part of it is anonymity, part of it is just the nature of the medium. A lot of folks who use computer BBSes, online services and the Internet are verbally aggressive types who just like to argue, complain, flame, slam, and correct everybody else. And as in the general society, it is often the loudest, rudest people who set the tone.

The other side of the equation is that commercial interests are moving in on the Internet. Some folks consider it a public service to flame any and all commercial messages. Others pick up the call, and extend that to any "for sale" posting in a non-sales newsgroup. Sort of like the self-appointed guardians of Proper Procedure on 2-meter repeaters. And then it's "monkey see, monkey do."

The next thing you know, the hapless newcomer is deluged with angry email. Unfortunately, this sort of thing has become almost a rite-of-passage on the Internet. Of course, none of the people who emailed you have seen anybody else's mail on the same subject. Which doesn't help you. One thing I would advise: if any one person "punished" you by sending multiple duplicate emails to your personal email account (as opposed to the newsgroup/mailing list), send a message to

postmaster@wherever_they_posted_from.com

Mailbox jamming is a much more serious Netiquette offense than posting a message in the wrong group. Let the postmaster deal with the offender.

As you've probably know by now, rec.radio.swap is the agreed upon-place for posting radio equipment for sale. Good luck there. I have bought a couple of things there, and have been very pleased.

>The flip side: I am a radio hobby press journalist. I have a column in
>Monitoring Times, several of my feature articles have appeared in QST and
>CQ in the last year. I also have authored several books on ham radio. Rest
>assured, when it comes time to recomment any USENET groups or mailing
>lists, I will not mention this one.

That would be a pity. I have gotten much useful information here. The kind of rudeness you experienced is a problem of online communications in general, not this group in particular. Check out the the pro/anti "right wing radio" debates in rec.radio.shortwave, or the code/no-code religious wars in rec.radio.amateur.misc. Or any newsgroup devoted to political or cultural discussion.

Rather than suggest your readers avoid this newsgroup, I'd advise them to ignore the nonsense and use the Net for what it's worth. Also, clue them in on a wonderful feature known in UNIX as the "kill file," and in the DOS/Windows mail packet reader world as the "twit filter." It enables you to configure your reader to ignore messages to/from specific people or about specific subjects.

Again, I regret the rudeness you have experienced here, and hope that what I've written here is helpful.

"Good luck" is right. Service from the big 3 seems to be a crapshot these days. I sent in my FT736R asking for check of power supply noise and general set of updates. 8 phone calls and 2 months later I'm getting it back with no net improvement except for a replacement of the lithium memory battery. Maybe they're better at fixing HTs than the bigger radios.

Not to be simplistic here, but can't you just turn down the volume on the VFO
that you don't want to hear.. there are separate volume controls for
each VFO...

Jay Maynard (jmaynard@admin5.hsc.uth.tmc.edu) wrote:

: It's not a problem for you at Netcom, but I can guarantee that continued
: forsale postings here _will_ make the group go away at many sites.

I have to admit, I was unaware of this problem until late in the discussion.

: During the reorganization that produced the current rec.radio.amateur.*
: groups, it was proposed that the .swap group be placed in the .amateur
: hierarchy. The consensus was that that was a Bad Idea both because hams swap
: equipment that isn't necessarily ham-specific, and because folks other than
: hams swap ham equipment. The group's placement where it is was both
: deliberate and the consensus view.

Well, even after a year, things change. I started another thread, offering
to propose the new group rec.radio.amateur.forsale, which I will check next.

BTW, I am not proposing that we dump the .swap group, only that we create a
new newsgroup that would be used for buying, selling and trading amateur
geam and related items, such as test equipment, tubes, etc. I am not saying
that this is the only answer, just that we should examine the situation as
it exists today.

From: Mike Lubrecht <flowmole@accessone.com>
Subject: IC-W31A Mods?

I just bought a new Icom IC-W31A (my first ham radio on my new technician-class ticket!) and am interested in finding out any modifications to extend the receive range: particularly mods. that just involve keypad inputs/system resets. I would also be interested in hardware mods to increase the TX range, if they're not too difficult.

Either E-mail me (a preserve bandwidth) or post - I haven't seen much info on the W-31A, so there may be others who are interested.

Thanks!
Mike

: Why do people have such a problem with using rec.radio.swap? Is it that they don't
: know it exists? rec.radio.swap is intended for radio sales of all types, CB,
: amateur, SWL, etc. Who needs another news group? Educate the users! FS and WTB
: belong in rec.radio.swap period, end sentence.

It probably is that they do not know that .swap exists, because it is outside of the rec.radio.amateur.* hierarchy. I, for one, would prefer to have a newsgroup that was dedicateed to sale/trade/purchase of *amateur* equipment only. What is so wrong with creating a new newsgroup with a more specific purpose?

Obviously, continuing to repeat the same dogma has not made the problem go away. Maybe nothing will.

>
>1) While rec.radio.swap is the correct place for such ads, it is not
>specific to amateur radio equipment.

Sense this mess started I have been paying more attention to
rec.radio.swap. Most of the post do seem to relate to amateur radio
equipment or at least to equipment that could be used by hams.

>
>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

I agree. The normal convention for such groups on the internet seems to
be forsale.

Also, as has been pointed out, rec.radio.swap does not follow the
rec.radio.amateur naming convention for newsgroups related to ham radio.
If someone is looking at a list of newsgroups. It does look like
rec.radio.amateur.equipment would be the place for fs posts.

>
>
If there is not a need for two such groups, maybe the rec.radio.swap
should be removed and rec.radio.amateur.forsale should take its place.

Thanks

The whole reason for those messages is your anonymity. If you were to post
under your own ID, you wouldn't have this problem.

I agree with the sentiments expressed, if not perhaps the language.

>The message is still the same. Ads belong on rec.radio.swap.

Yes, it is, but you are discrediting the message by your cowardice.

The main reason for neutralization is to prevent the tube(s) from oscillating.
An additional side benefit is that it makes the point of maximum power output
and minimum plate current the same. Otherwise, the tuning would be slightly
different for each. Neutralization is almost always required for
grounded-cathode amplifiers, and sometimes for grounded-grid too.

Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.........

1.) The FAQ is too long and complicated to read, so it's ok to ignore it
and do what ever you like.

2.) The correct way to applogize for being insulting is with another
insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an
inappropriate manner, my response should be it to continue doing the wrong
thing on purpose to "teach my rival or subordinate a lesson" without
regard for my own ill-behavior. The ability to show someone else "I don't
have to listen to my underlings" would supersede maturity in this
situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other
easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out
effects of the grid-plate capacitance coupling in the amplifier. One of
the effects of an un neutralized amplifier is the possibility of the
stage breaking into oscillation. I suggest that you follow the
neutralization procedure described in the transmitter manual. It's not a
difficult thing to do.

"Didn't work" isn't very descriptive. What are the symptoms? These rigs are pretty simple. You can certainly fix most problems yourself. I wouldn't give up on it unless it had something like a fried power transformer or some other part that's impossible to get from a now defunct manufacturer.

This *is* amateur radio. You really should try to do more than turn the knobs on the front. Fixing old rigs is a good introduction to the workings of radio.

Gary

>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part
inside the tube known as a "getter", and it flashes and burns up any stray
gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a
bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout?
The digital readout circuit board was troublesome with poor solder
connections and often requires some work to make the display function.
You might want to contact Internation Radio in Port St. Lucie, Florida.
They used to publish a Kenwood Users newsletter and used to sell a
collection of the newsletter articles that dealt with the TS-820
specifically. There were a lot of shortcomings with the rig, but the
suggestions in the newletters go a long way towards making it a very good
rig. There was also an article or two in CQ or QST in the early eighties.
One of them dealt with adding the WARC bands to the rig. Not for the

feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking in the cap is the source of ignition noise. (Of course this could be one of those engines with no distributor, but it's worth a shot.)

Subject: New MFJ 6 Meter SSB Rig

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears that MFJ may not be quite ready to ship the units. But that's ok; pre-production advertising is really not that uncommon, providing the consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP fans. However, I am a bit surprised at their choice of bands. After having produced a 20 meter version, I would have guessed that a 10 or 15 meter unit would be next on the list, given that there may be a bit more activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two articles. Quite a few of us have dopplers and when we looked at the circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all
Jim K5QQ

Subject: What is the price of Kenwood TS-450AT/850AT/TS-870 in the USA?

Hello!
I would like to how much a Kenwood HF rig costs in the US.

Can you give me a clue? Its not necessary to tell me where to get the cheapest rig - I just want to know the approximate price.

I'm interested in the following rigs:
Kenwood TS-450AT, TS-850AT and TS-870.

Tnx in advance & 73

I think you hit the nail on the head. I suspect the big problem is that newcomers don't know about rec.radio.swap. It's not even in the same hierarchy as the amateur radio groups. Newbies come in, see the rec.radio.amateur hierarchy, see no forsale group, but see an equipment group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they wouldn't make the mistake. The Guide has lots of very useful info. Unfortunately, the Guide is some 200+ lines in length. I wonder how many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this would be far more intuitive for newcomers to figure out. Perhaps a short, weekly "charter of the newsgroups" message would be useful as well -- provided the author signs his/her/its name. 8^{)

: I'd save myselft the trouble and buy from a stateside distributor,

Comments from a "Stateside distributor", who has had experience both ways
...

If you buy a radio from someone you never saw before, and never expect to
see again, all he is going to be interested in is getting your money out
of your wallet and you on your way.

If you buy from a local (or regional) dealer, you are buying from someone
who wants to see YOU happy, since he hopes that you will come back again
and again, for all those accessories, mobile radios, antennas and the
like that we hams always need to add to our collection.

If you bring in an oversees "Yaekenicostanco" radio, you will have NO US
warranty - the American distributors warrant only those radios that they
import, and quite possibly might not service them - they are completely
within their rights to do so. There very well may be (as has been in the
past) board or component differences between various versions of the
radio destined for different countries, thus compounding the situation.
(Some manufacturers have had up to five different versions of the same
radio - with each version destined for a different market area, with
different regulations.)

If you buy the radio from a local (or regional) dealer, you have someone
you can go to with questions and problems ... but long-distance calls to
Hong Kong to get answers to a question get expensive - to say nothing of
"how do you ask someone how to program odd splits for repeaters into your

new handy - when he is only really fluent, technically, in Chinese?"

I doubt that you will find any significant price differentials in buying in Hong Kong ... that was true years ago (I was there during the VietNam era), but not now, with the global economy/distribution situation now in existance. However, you can find real bargains in Hong Kong on things that are local-labor-intensive (like tailored suits for example).

Enjoy your trip ... take the tram to the top of Victoria Peak and let me know if the view is still as grand as it was on Christmas Day of 1972 ... and good luck to you!

Very 73,

"Squeak" Porray, AD7K

I agree with Tim. I've been to HK several times on business trips and it is not worth the hassling of dealing with the salesmen over there (prices are not fixed and you have to deal, yes as in bargaining!). Also there is the problem of the warranty. I don't think any of the major brands (K,I,Y) honor warranties of any equipment bought overseas. What I have bought though are accessories. Bring your AES catalog to check the price differences. Some things are cheaper there but others are around the same or even higher depending on the store.

Another suggestion is to get away from the Nathan Rd. stores, those
are usually overpriced.

Have fun in HK.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so
this test isn't very useful for transistor rigs. Your symptom
could be the result of reduced PA gain, due to an internal
emitter ballast resistor failure, but it's probably another
cause. You might check the bandpass filter switching in the rig
for the two highest bands. And you might want to look at the
drive level from the low power stages. A hint to where the
trouble may lie would be whether this condition appeared
suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing
power foldback due to VSWR on the two highest bands. Are you testing
into a known good dummy load? No tune rigs won't work well at all
using a lightbulb for a dummy load. It's not even close to their
design output impedance. Lightbulbs work fine as crude loads on
the older rigs with tune and load controls, but not on the no tune
rigs. They have to see the right impedance, or they'll foldback
power.

: however, the 900 mhz band does not rxcv as it does on a friend's
: FT530. --==> snip

This is as it should be ... Congress passed a law several years ago that made it illegal to manufacture (if domestic) or import (if from overseas) any receiver that receives, or can be modified to receive, cellular telephone conversations ... following up on the Electronic Privacy Act, which makes it illegal to actually receive cellular telephone conversations themselves. This prohibition went into effect in April of 1994 ... stocks on hand could be sold off, but nothing imported/manufactured after that date could be sold. There is no modification possible on these receivers, since the law was very specific in making sure that modification was impossible. If 800 MHz receive is important to you, your only hope is to find a radio made or imported before April of 1994 (i.e., pre-Lot 20 for an FT530), and hope you want it more than its current owner ($$$$$)!

73 and good luck!

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Subject: HELP PLEASE! - Old RCA Senior Volt-Ohmist

I thought I might be able to restore the above after getting it in a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened it to find a corroded Alkaline 1.5v cell soldered in place. While the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

dharper@kumc.wpo.ukans.edu

> good.

Mike-

I currently use the TS-50 with the AT-50 in my car. There are about 15
people ahead of me on the AES/Orlando waiting list for the IC-706, with a
shipment expected in about a week.

I wonder what is involved in using the AT-50 with the Icom? I would think
you might at least need a special cable.

I agree with your comment about the TS-50's SSB filter. I plan to get the
narrow SSB filter for the Icom's narrow filter position, with intent of
possibly installing it in place of the existing filter. If this works
out, I would then get a CW filter to go in the narrow position. Does this
sound feasible?

From: mlazaroff@delphi.com
Subject: Need help with ignition noise problem...

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that facilitates the operation or maintenance of an amateur radio station - would be "on topic." This could include, but not be limited to, test equipment, replacement parts, commercial gear that could be converted to operate on the authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

> In the November issuse of QST and 73 magazines are a couple of very
> interesting RDF (Radio Direction Finding) projects. The projects are
> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my modified Atlanta kit. ;-)

> It is fun to share one ham's comment: "Dopplers are LETHAL when it comes
> to tracking down trouble makers".

Fer sure!

Mine hasn't got that that many hours, but it's doing a fine job so far.
What I wanted to add is that it puts out 9.5 watts on 13.8 volts and
over 6 watts on 12.2 volts. This would seem to fit your desires.

An 'as new' Yaesu 900 for sale including the mobile mount and the remote mounting kit which allows the display to be installed separately from the main unit. Excellent condition, still in the original box. Asking for $1000.

E-mail to kc1qf@amsat.org.

I need the general tramsmit mode of the TS50S. Can anyone supply the details please? Thanks in advance.

PS: Please dont post 'not for sale messages'

Message-ID: <1995Oct24.174319.10451@unislc.slc.unisys.com>
Source record: 210921

Hello all,

I have seen many modifications for the alinco DR-570, DR-599, DR-600, DR-610 etc, but nothing except the cross band mod for the DR-590T...

Are there any mods which will enable receiving 118MHz - aircraft, and 800 Mhz bands on the DR-590T mobile???

(other than cutting the Blue wire for cross band repeat!!)

Not quite true.

Most remailers will allow an e-mail reply back to the anonymous poster.
All you have to do is use the reply function.

In addition most remailers provide an e-mail address where abuse of the
service can be reported. In our net-lids case, it is at the top before
the text of the message.

Most remailer system administrators frown on mis-use of this service.
Mis-use would normally be things like spaming, mail-bombing, threats and
such.

From: turner@safety.ICS.UCI.EDU (Clark Savage Turner WA3JPG)
Subject: Quieting reed relays?

I just got an OMNI VI. It is a good basic radio, with only a few
drawbacks. It has a reed relay that controls some part of the keying
circuit (yeah, I don't believe it either...I heard the relay, and called
Ten Tec who said it was the reed relay)

Now, I will look to see exactly where it is...and try to figure out whether
I can replace it with a transistor or something. I would rather leave
well enough alone if I can - hence my question:

Anyone know how to "quiet" a reed relay?

I thought I could take it off the board then remount it into some rubber
or silicone cement on the circuit board to deaden the sound. I also
thought that I might then cover it with a little styrofoam box of some
sort. Any suggestions? Anyone else have the OMNI and want to figure
this out with me?

I would like to add to this thread - I was there not too long ago and I
got the feeling many stores were more "communications" stores. They had ham,
two way, commercial HF, you name it. Whatever you wanted, whoever you were,
they were happy to sell it to you. Perfectly legal, of course, as it would be
in the US, as long as you didn't try to use it here, or in HK. I suspect the
HK government keeps after toursts trying out their new toys before they leave!

I also found the HK shop keeper's to be the nastiest, most disinterested,
discourteous S.O.B.'s I have EVER run into. It was so bad I asked my hotel
manager what I was doing wrong. He said "probably nothing", adding "being
Caucasian and wanting less than 10 of anything was not a good combination for
many sales people; a serious problem in HK". All of this right after visiting
Tokyo where the HAM (REAL ham) stores where SO polite and friendly I literally
could not believe it.

Mine hasn't got that that many hours, but it's doing a fine job so far. What I wanted to add is that it puts out 9.5 watts on 13.8 volts and over 6 watts on 12.2 volts. This would seem to fit your desires.

Subject: FLAMES

I'd like to take this opportunity to thank all who sent me tons of mail suggesting that I take my ad about the T-T linear to another list.

My point: Once, maybe twice, would have been sufficient to call my attention to the error of my ways. Obviously I do not belong on this list nor will I ever be here after this posting.

The flip side: I am a radio hobby press journalist. I have a column in Monitoring Times, several of my feature articles have appeared in QST and CQ in the last year. I also have authored several books on ham radio. Rest assured, when it comes time to recomment any USENET groups or mailing lists, I will not mention this one.

Thanks for a wonderful time.

Mark Johnson (mjjohn5@lookout.mtt.it.uswc.uswest.com) wrote:

: If there is not a need for two such groups, maybe the rec.radio.swap
: should be removed and rec.radio.amateur.forsale should take its place.

I do not see the need to replace rec.radio.swap, just to create a new, more
specific newsgroup. Replacing it might just cause further confusion.

: Thanks

Not to be simplistic here, but can't you just turn down the volume on the VFO
that you don't want to hear.. there are separate volume controls for
each VFO...

Jay Maynard (jmaynard@admin5.hsc.uth.tmc.edu) wrote:

: It's not a problem for you at Netcom, but I can guarantee that continued
: forsale postings here _will_ make the group go away at many sites.

I have to admit, I was unaware of this problem until late in the discussion.

: During the reorganization that produced the current rec.radio.amateur.*
: groups, it was proposed that the .swap group be placed in the .amateur
: hierarchy. The consensus was that that was a Bad Idea both because hams swap
: equipment that isn't necessarily ham-specific, and because folks other than
: hams swap ham equipment. The group's placement where it is was both
: deliberate and the consensus view.

Well, even after a year, things change. I started another thread, offering
to propose the new group rec.radio.amateur.forsale, which I will check next.

BTW, I am not proposing that we dump the .swap group, only that we create a
new newsgroup that would be used for buying, selling and trading amateur
geam and related items, such as test equipment, tubes, etc. I am not saying
that this is the only answer, just that we should examine the situation as
it exists today.

From: Mike Lubrecht <flowmole@accessone.com>
Subject: IC-W31A Mods?

I just bought a new Icom IC-W31A (my first ham radio on my new technician-class ticket!) and am interested in finding out any modifications to extend the receive range: particularly mods. that just involve keypad inputs/system resets. I would also be interested in hardware mods to increase the TX range, if they're not too difficult.

Either E-mail me (a preserve bandwidth) or post - I haven't seen much info on the W-31A, so there may be others who are interested.

Thanks!
Mike

Dale Chidester (chideste@xvnews.unconfigured.domain) wrote:

: Why do people have such a problem with using rec.radio.swap? Is it that they don't
: know it exists? rec.radio.swap is intended for radio sales of all types, CB,
: amateur, SWL, etc. Who needs another news group? Educate the users! FS and WTB
: belong in rec.radio.swap period, end sentence.

It probably is that they do not know that .swap exists, because it is outside of the rec.radio.amateur.* hierarchy. I, for one, would prefer to have a newsgroup that was dedicateed to sale/trade/purchase of *amateur* equipment only. What is so wrong with creating a new newsgroup with a more specific purpose?

Obviously, continuing to repeat the same dogma has not made the problem go away. Maybe nothing will.

>
>1) While rec.radio.swap is the correct place for such ads, it is not
>specific to amateur radio equipment.

Sense this mess started I have been paying more attention to
rec.radio.swap. Most of the post do seem to relate to amateur radio
equipment or at least to equipment that could be used by hams.

>
>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

I agree. The normal convention for such groups on the internet seems to
be forsale.

Also, as has been pointed out, rec.radio.swap does not follow the
rec.radio.amateur naming convention for newsgroups related to ham radio.
If someone is looking at a list of newsgroups. It does look like
rec.radio.amateur.equipment would be the place for fs posts.

>
>
If there is not a need for two such groups, maybe the rec.radio.swap
should be removed and rec.radio.amateur.forsale should take its place.

Thanks

The whole reason for those messages is your anonymity. If you were to post
under your own ID, you wouldn't have this problem.

I agree with the sentiments expressed, if not perhaps the language.

>The message is still the same. Ads belong on rec.radio.swap.

Yes, it is, but you are discrediting the message by your cowardice.

The main reason for neutralization is to prevent the tube(s) from oscillating.
An additional side benefit is that it makes the point of maximum power output
and minimum plate current the same. Otherwise, the tuning would be slightly
different for each. Neutralization is almost always required for
grounded-cathode amplifiers, and sometimes for grounded-grid too.

From: w8jitom@aol.com (W8JI Tom)
Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.........

1.) The FAQ is too long and complicated to read, so it's ok to ignore it
and do what ever you like.

2.) The correct way to applogize for being insulting is with another
insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an
inappropriate manner, my response should be it to continue doing the wrong
thing on purpose to "teach my rival or subordinate a lesson" without
regard for my own ill-behavior. The ability to show someone else "I don't
have to listen to my underlings" would supersede maturity in this
situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other
easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out
effects of the grid-plate capacitance coupling in the amplifier. One of
the effects of an un neutralized amplifier is the possibility of the
stage breaking into oscillation. I suggest that you follow the
neutralization procedure described in the transmitter manual. It's not a
difficult thing to do.

"Didn't work" isn't very descriptive. What are the symptoms? These rigs are pretty simple. You can certainly fix most problems yourself. I wouldn't give up on it unless it had something like a fried power transformer or some other part that's impossible to get from a now defunct manufacturer.

This *is* amateur radio. You really should try to do more than turn the knobs on the front. Fixing old rigs is a good introduction to the workings of radio.

Gary

>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part
inside the tube known as a "getter", and it flashes and burns up any stray
gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a
bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout?
The digital readout circuit board was troublesome with poor solder
connections and often requires some work to make the display function.
You might want to contact Internation Radio in Port St. Lucie, Florida.
They used to publish a Kenwood Users newsletter and used to sell a
collection of the newsletter articles that dealt with the TS-820
specifically. There were a lot of shortcomings with the rig, but the
suggestions in the newletters go a long way towards making it a very good
rig. There was also an article or two in CQ or QST in the early eighties.
One of them dealt with adding the WARC bands to the rig. Not for the

feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking in the cap is the source of ignition noise. (Of course this could be one of those engines with no distributor, but it's worth a shot.)

Subject: New MFJ 6 Meter SSB Rig

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears that MFJ may not be quite ready to ship the units. But that's ok; pre-production advertising is really not that uncommon, providing the consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP fans. However, I am a bit surprised at their choice of bands. After having produced a 20 meter version, I would have guessed that a 10 or 15 meter unit would be next on the list, given that there may be a bit more activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two articles. Quite a few of us have dopplers and when we looked at the circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all

From: d90thoah@ida.liu.se (Thomas Ahlblom)
Subject: What is the price of Kenwood TS-450AT/850AT/TS-870 in the USA?

Hello!
I would like to how much a Kenwood HF rig costs in the US.

Can you give me a clue? Its not necessary to tell me where to get the cheapest rig - I just want to know the approximate price.

I'm interested in the following rigs:
Kenwood TS-450AT, TS-850AT and TS-870.

Tnx in advance & 73

de Thomas / SM5VOH

I think you hit the nail on the head. I suspect the big problem is
that newcomers don't know about rec.radio.swap. It's not even in the
same hierarchy as the amateur radio groups. Newbies come in, see the
rec.radio.amateur hierarchy, see no forsale group, but see an equipment
group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they
wouldn't make the mistake. The Guide has lots of very useful info.
Unfortunately, the Guide is some 200+ lines in length. I wonder how
many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this
would be far more intuitive for newcomers to figure out. Perhaps a
short, weekly "charter of the newsgroups" message would be useful as
well -- provided the author signs his/her/its name. 8^{)

I have a Phillips AM-FM Deluxe radio with five short wave bands. It is
about twenty years old and has developed a whooshing noise on all bands
all the time. I live in Gainesville Fl. I don't think there is a radio
repair store in town. Can old radios still be repaired? or do I have to
junk it?

: >to Hong Kong soon and am interested in shopping for an HT. What can
: you
: >advise me about:

: I'd save myselft the trouble and buy from a stateside distributor,

Comments from a "Stateside distributor", who has had experience both ways
...

If you buy a radio from someone you never saw before, and never expect to
see again, all he is going to be interested in is getting your money out
of your wallet and you on your way.

If you buy from a local (or regional) dealer, you are buying from someone
who wants to see YOU happy, since he hopes that you will come back again
and again, for all those accessories, mobile radios, antennas and the
like that we hams always need to add to our collection.

If you bring in an oversees "Yaekenicostanco" radio, you will have NO US
warranty - the American distributors warrant only those radios that they
import, and quite possibly might not service them - they are completely
within their rights to do so. There very well may be (as has been in the
past) board or component differences between various versions of the
radio destined for different countries, thus compounding the situation.
(Some manufacturers have had up to five different versions of the same
radio - with each version destined for a different market area, with
different regulations.)

If you buy the radio from a local (or regional) dealer, you have someone
you can go to with questions and problems ... but long-distance calls to
Hong Kong to get answers to a question get expensive - to say nothing of
"how do you ask someone how to program odd splits for repeaters into your

new handy - when he is only really fluent, technically, in Chinese?"

I doubt that you will find any significant price differentials in buying in Hong Kong ... that was true years ago (I was there during the VietNam era), but not now, with the global economy/distribution situation now in existance. However, you can find real bargains in Hong Kong on things that are local-labor-intensive (like tailored suits for example).

Enjoy your trip ... take the tram to the top of Victoria Peak and let me know if the view is still as grand as it was on Christmas Day of 1972 ... and good luck to you!

I agree with Tim. I've been to HK several times on business trips and it is not worth the hassling of dealing with the salesmen over there (prices are not fixed and you have to deal, yes as in bargaining!). Also there is the problem of the warranty. I don't think any of the major brands (K,I,Y) honor warranties of any equipment bought overseas. What I have bought though are accessories. Bring your AES catalog to check the price differences. Some things are cheaper there but others are around the same or even higher depending on the store.

Another suggestion is to get away from the Nathan Rd. stores, those
are usually overpriced.

Have fun in HK.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so
this test isn't very useful for transistor rigs. Your symptom
could be the result of reduced PA gain, due to an internal
emitter ballast resistor failure, but it's probably another
cause. You might check the bandpass filter switching in the rig
for the two highest bands. And you might want to look at the
drive level from the low power stages. A hint to where the
trouble may lie would be whether this condition appeared
suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing
power foldback due to VSWR on the two highest bands. Are you testing
into a known good dummy load? No tune rigs won't work well at all
using a lightbulb for a dummy load. It's not even close to their
design output impedance. Lightbulbs work fine as crude loads on
the older rigs with tune and load controls, but not on the no tune
rigs. They have to see the right impedance, or they'll foldback
power.

Subject: FT-11R Sub-audible tone NOT!

I have a friend here in Atlanta who has a FT-11R that
you can hear the CTCSS (should be sub audible) tone.

On very good repeaters, the tone noise is quite loud,
and at best annoying.

I have a FT-51R which does not have this problem.

Are there other Yaesu FT-?1R users with similar experiences?

Is there any adjustment my friend might make on his FT-11R?

Thanks,

Victor KF4BUX Gregg

This is as it should be ... Congress passed a law several years ago that made it illegal to manufacture (if domestic) or import (if from overseas) any receiver that receives, or can be modified to receive, cellular telephone conversations ... following up on the Electronic Privacy Act, which makes it illegal to actually receive cellular telephone conversations themselves. This prohibition went into effect in April of 1994 ... stocks on hand could be sold off, but nothing imported/manufactured after that date could be sold. There is no modification possible on these receivers, since the law was very specific in making sure that modification was impossible. If 800 MHz receive is important to you, your only hope is to find a radio made or imported before April of 1994 (i.e., pre-Lot 20 for an FT530), and hope you want it more than its current owner ($$$$$)!

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Subject: HELP PLEASE! - Old RCA Senior Volt-Ohmist

I thought I might be able to restore the above after getting it in a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened it to find a corroded Alkaline 1.5v cell soldered in place. While the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

dharper@kumc.wpo.ukans.edu

Mike-

I currently use the TS-50 with the AT-50 in my car. There are about 15
people ahead of me on the AES/Orlando waiting list for the IC-706, with a
shipment expected in about a week.

I wonder what is involved in using the AT-50 with the Icom? I would think
you might at least need a special cable.

I agree with your comment about the TS-50's SSB filter. I plan to get the
narrow SSB filter for the Icom's narrow filter position, with intent of
possibly installing it in place of the existing filter. If this works
out, I would then get a CW filter to go in the narrow position. Does this
sound feasible?

From: mlazaroff@delphi.com
Subject: Need help with ignition noise problem...

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

From: jlowman@netcom.com (Jim Lowman)
Subject: Opinions wanted: new newsgroup .forsale

Dan Brown (danb@a.crl.com) wrote:
: jlowman@netcom.com (Jim Lowman) wrote:

: >1) While rec.radio.swap is the correct place for such ads, it is not
: >specific to amateur radio equipment.

: From other discussions I've seen, this was intentional--amateurs use
: lots of non-ham equipment (Motorola UHF and VHF business-band radios,
: for instance). Most of the stuff I've seen in r.r.swap would be
: appropriate in a group in the .amateur hierarchy, either because (1)
: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that facilitates the operation or maintenance of an amateur radio station - would be "on topic." This could include, but not be limited to, test equipment, replacement parts, commercial gear that could be converted to operate on the authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

> In the November issuse of QST and 73 magazines are a couple of very
> interesting RDF (Radio Direction Finding) projects. The projects are
> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my modified Atlanta kit. ;-)

In article <DGq88o.9BA@inter.NL.net>, geertj@ripe.net (Geert Jan de Groot) says:

>Repairing the W2a is easy (I did so several times), though diagnosing
>is difficult. Before you open the unit, do some tests like:
>- really verify if the problem is both VHF and UHF

Yep, problem is on both VFO's.. weak audio output on UHF and VHF.

>- Connect external speakers to both jacks and test again.

Yep, still weak audio, on internal and external speakers.

>- Does a quick powerdown/powerup restore audio levels?

If you key the mic very quickly, upon returning to receive, the
audio is louder, but then quickly goes back to very soft.

>- DO you notice distortion?

Yes, when the volume control is increased, the audio sometimes
even breaks up.. high distortion..

>It may be a capacitor going soft, but then again, it may not.

An SMD cap?? I have the schematics that came with the HT, but not
the service manual.. sounds more and more like a trip back to ICOM,
unless I can be fairly sure of the offending parts to take a chance
at replacing them. Even at that.. I would probably have to go to ICOM
for the parts anyway!!

>I do NOT recommend working on the unit if you can't take ESD precautions,

You mean grounded tip soldering irons right!!!

>if you don't have the maintenance manual, or if you are unconfortable
>working on 0102 SMD's. And remember NOT to transmit if the casing
>is not installed (the back side is the cooling).

Thanks for all the insight... And here I thought these radio's
would work forever!!!

>Do they have wider filters?

>Kimmo, W5/OH3WU

The European FM broadcast channels are spaced at 150 kHz intervals, as opposed to the US standard of 200 kHz. With most US automobile radios, you'll have no trouble tuning European stations, as your receiver's automatic frequency control (AFC) circuit will compensate reasonably well for the frequency difference. At least, that's been my experience...

Cal-

I think the basis of many complaints about the Radio Shack DSP, is that it doesn't compare to others on the market. That doesn't mean it isn't effective against heterodynes.

The DSP's ability to knock out a heterodyne is very impressive. However, I find that some people talk in a monotone voice, and it knocks them out just as well!

John-

The DX35 is NOT a transceiver. It is a simple transmitter only, with
"controlled carrier" AM modulation. It dates from the mid-to-late 1950s.

I have had good luck with using braided copper sheath to enclose
the spark plug wires, building a copper box around the distributor,
and then bonding it all to the engine block. This essentially
encloses the wiring completely, shielding those little antennas
that we call spark plug wires. It made a day and night difference

on my 1985 Toyota Tercel. Try it, it should only take a few hours.

I too have the tm-742a with the 28mhz unit and I am having no problem
Reciving over 30mhz. The only problem I am having is that when I tx on
high power in the 28mhz range It locks up the radio. A friend of mine has
the same radio and the recive is fine but he too has the TX problem. I
would check the mod again and make sure you are following the ARTSCI book
and they will work fine.

A friend who has an ICOM IC-38A 222 MHz transceiver reports that although this radio is advertised as a 25 watt radio, it will put out 45 watts by adjustment of an internal drive pot. Apparently it is factory set at 25 watts to meet the novice class power limit.

My question: does anyone know if the same is true for the Kenwood TM-321, which I have? Or is 25 watts the absolute max for this radio?

From: w8jitom@aol.com (W8JI Tom)
Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.....

1.) The FAQ is too long and complicated to read, so it's ok to ignore it and do what ever you like.

2.) The correct way to applogize for being insulting is with another insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an inappropriate manner, my response should be it to continue doing the wrong thing on purpose to "teach my rival or subordinate a lesson" without regard for my own ill-behavior. The ability to show someone else "I don't have to listen to my underlings" would supersede maturity in this situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out effects of the grid-plate capacitance coupling in the amplifier. One of the effects of an un neutralized amplifier is the possibility of the stage breaking into oscillation. I suggest that you follow the neutralization procedure described in the transmitter manual. It's not a difficult thing to do.

>really, I still dont) Is it worth fixing or should I be looking at a new
>mfj 6 m rig?? and who would I even contact about fixing it ?□are there
>people that fix these older units at a reasonable cost - I still have
>education bills to pay!□□

"Didn't work" isn't very descriptive. What are the symptoms? These
rigs are pretty simple. You can certainly fix most problems yourself.
I wouldn't give up on it unless it had something like a fried power
transformer or some other part that's impossible to get from a now
defunct manufacturer.

This *is* amateur radio. You really should try to do more than
turn the knobs on the front. Fixing old rigs is a good introduction
to the workings of radio.

Gary

>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part

inside the tube known as a "getter", and it flashes and burns up any stray gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout? The digital readout circuit board was troublesome with poor solder connections and often requires some work to make the display function. You might want to contact Internation Radio in Port St. Lucie, Florida. They used to publish a Kenwood Users newsletter and used to sell a collection of the newsletter articles that dealt with the TS-820 specifically. There were a lot of shortcomings with the rig, but the suggestions in the newletters go a long way towards making it a very good rig. There was also an article or two in CQ or QST in the early eighties. One of them dealt with adding the WARC bands to the rig. Not for the feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking
in the cap is the source of ignition noise. (Of course this could
be one of those engines with no distributor, but it's worth a shot.)

Subject: New MFJ 6 Meter SSB Rig

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears
that MFJ may not be quite ready to ship the units. But that's ok;
pre-production advertising is really not that uncommon, providing the
consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP
fans. However, I am a bit surprised at their choice of bands. After having
produced a 20 meter version, I would have guessed that a 10 or 15 meter
unit would be next on the list, given that there may be a bit more
activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two
articles. Quite a few of us have dopplers and when we looked at the

circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all

I think you hit the nail on the head. I suspect the big problem is
that newcomers don't know about rec.radio.swap. It's not even in the
same hierarchy as the amateur radio groups. Newbies come in, see the
rec.radio.amateur hierarchy, see no forsale group, but see an equipment
group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they
wouldn't make the mistake. The Guide has lots of very useful info.
Unfortunately, the Guide is some 200+ lines in length. I wonder how
many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this
would be far more intuitive for newcomers to figure out. Perhaps a
short, weekly "charter of the newsgroups" message would be useful as
well -- provided the author signs his/her/its name. 8^{)

>bob

The main reason for neutralization is to prevent the tube(s) from oscillating.
An additional side benefit is that it makes the point of maximum power output
and minimum plate current the same. Otherwise, the tuning would be slightly
different for each. Neutralization is almost always required for
grounded-cathode amplifiers, and sometimes for grounded-grid too.

Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.....

1.) The FAQ is too long and complicated to read, so it's ok to ignore it and do what ever you like.

2.) The correct way to applogize for being insulting is with another insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an inappropriate manner, my response should be it to continue doing the wrong thing on purpose to "teach my rival or subordinate a lesson" without regard for my own ill-behavior. The ability to show someone else "I don't have to listen to my underlings" would supersede maturity in this situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out effects of the grid-plate capacitance coupling in the amplifier. One of the effects of an un neutralized amplifier is the possibility of the stage breaking into oscillation. I suggest that you follow the neutralization procedure described in the transmitter manual. It's not a difficult thing to do.

"Didn't work" isn't very descriptive. What are the symptoms? These
rigs are pretty simple. You can certainly fix most problems yourself.
I wouldn't give up on it unless it had something like a fried power
transformer or some other part that's impossible to get from a now
defunct manufacturer.

This *is* amateur radio. You really should try to do more than
turn the knobs on the front. Fixing old rigs is a good introduction
to the workings of radio.

>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part

inside the tube known as a "getter", and it flashes and burns up any stray gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout? The digital readout circuit board was troublesome with poor solder connections and often requires some work to make the display function. You might want to contact Internation Radio in Port St. Lucie, Florida. They used to publish a Kenwood Users newsletter and used to sell a collection of the newsletter articles that dealt with the TS-820 specifically. There were a lot of shortcomings with the rig, but the suggestions in the newletters go a long way towards making it a very good rig. There was also an article or two in CQ or QST in the early eighties. One of them dealt with adding the WARC bands to the rig. Not for the feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking
in the cap is the source of ignition noise. (Of course this could
be one of those engines with no distributor, but it's worth a shot.)

Subject: New MFJ 6 Meter SSB Rig

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears
that MFJ may not be quite ready to ship the units. But that's ok;
pre-production advertising is really not that uncommon, providing the
consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP
fans. However, I am a bit surprised at their choice of bands. After having
produced a 20 meter version, I would have guessed that a 10 or 15 meter
unit would be next on the list, given that there may be a bit more
activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two
articles. Quite a few of us have dopplers and when we looked at the

circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all

I think you hit the nail on the head. I suspect the big problem is
that newcomers don't know about rec.radio.swap. It's not even in the
same hierarchy as the amateur radio groups. Newbies come in, see the
rec.radio.amateur hierarchy, see no forsale group, but see an equipment
group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they
wouldn't make the mistake. The Guide has lots of very useful info.
Unfortunately, the Guide is some 200+ lines in length. I wonder how
many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this
would be far more intuitive for newcomers to figure out. Perhaps a
short, weekly "charter of the newsgroups" message would be useful as
well -- provided the author signs his/her/its name. 8^{)

I have a Phillips AM-FM Deluxe radio with five short wave bands. It is
about twenty years old and has developed a whooshing noise on all bands
all the time. I live in Gainesville Fl. I don't think there is a radio
repair store in town. Can old radios still be repaired? or do I have to
junk it?

: >to Hong Kong soon and am interested in shopping for an HT. What can
: you

: >advise me about:

: I'd save myselft the trouble and buy from a stateside distributor,

Comments from a "Stateside distributor", who has had experience both ways ...

If you buy a radio from someone you never saw before, and never expect to see again, all he is going to be interested in is getting your money out of your wallet and you on your way.

If you buy from a local (or regional) dealer, you are buying from someone who wants to see YOU happy, since he hopes that you will come back again and again, for all those accessories, mobile radios, antennas and the like that we hams always need to add to our collection.

If you bring in an oversees "Yaekenicostanco" radio, you will have NO US warranty - the American distributors warrant only those radios that they import, and quite possibly might not service them - they are completely within their rights to do so. There very well may be (as has been in the past) board or component differences between various versions of the radio destined for different countries, thus compounding the situation. (Some manufacturers have had up to five different versions of the same radio - with each version destined for a different market area, with different regulations.)

If you buy the radio from a local (or regional) dealer, you have someone you can go to with questions and problems ... but long-distance calls to Hong Kong to get answers to a question get expensive - to say nothing of "how do you ask someone how to program odd splits for repeaters into your new handy - when he is only really fluent, technically, in Chinese?"

I doubt that you will find any significant price differentials in buying in Hong Kong ... that was true years ago (I was there during the VietNam era), but not now, with the global economy/distribution situation now in existance. However, you can find real bargains in Hong Kong on things that are local-labor-intensive (like tailored suits for example).

Enjoy your trip ... take the tram to the top of Victoria Peak and let me know if the view is still as grand as it was on Christmas Day of 1972 ... and good luck to you!

Very 73,

"Squeak" Porray, AD7K
Manager, Amateur Electronic Supply/Las Vegas

ps: I hope you don't think I am touting just our company ... in the above, I speak for the Amateur Radio community in general, and I think that it speaks for all domestic Amateur Radio Dealers as well.

I agree with Tim. I've been to HK several times on business trips and it is not worth the hassling of dealing with the salesmen over there (prices are not fixed and you have to deal, yes as in bargaining!). Also there is the problem of the warranty. I don't think any of the major brands (K,I,Y) honor warranties of any equipment bought overseas. What I have bought though are accessories. Bring your AES catalog to check the price differences. Some things are cheaper there but others are around the same or even higher depending on the store. Another suggestion is to get away from the Nathan Rd. stores, those are usually overpriced.

Have fun in HK.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so
this test isn't very useful for transistor rigs. Your symptom
could be the result of reduced PA gain, due to an internal
emitter ballast resistor failure, but it's probably another
cause. You might check the bandpass filter switching in the rig
for the two highest bands. And you might want to look at the
drive level from the low power stages. A hint to where the
trouble may lie would be whether this condition appeared
suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing
power foldback due to VSWR on the two highest bands. Are you testing
into a known good dummy load? No tune rigs won't work well at all
using a lightbulb for a dummy load. It's not even close to their
design output impedance. Lightbulbs work fine as crude loads on
the older rigs with tune and load controls, but not on the no tune
rigs. They have to see the right impedance, or they'll foldback
power.

Subject: FT-11R Sub-audible tone NOT!

I have a friend here in Atlanta who has a FT-11R that
you can hear the CTCSS (should be sub audible) tone.

On very good repeaters, the tone noise is quite loud,
and at best annoying.

I have a FT-51R which does not have this problem.

Are there other Yaesu FT-?1R users with similar experiences?

Is there any adjustment my friend might make on his FT-11R?

Thanks,

Victor KF4BUX Gregg

: Hi, I recently bought an FT530, I also modified it for extended rxcv,
: however, the 900 mhz band does not rxcv as it does on a friend's
: FT530. --==> snip

This is as it should be ... Congress passed a law several years ago that
made it illegal to manufacture (if domestic) or import (if from overseas)
any receiver that receives, or can be modified to receive, cellular
telephone conversations ... following up on the Electronic Privacy Act,
which makes it illegal to actually receive cellular telephone
conversations themselves. This prohibition went into effect in April of
1994 ... stocks on hand could be sold off, but nothing
imported/manufactured after that date could be sold. There is no
modification possible on these receivers, since the law was very specific
in making sure that modification was impossible. If 800 MHz receive is
important to you, your only hope is to find a radio made or imported
before April of 1994 (i.e., pre-Lot 20 for an FT530), and hope you want
it more than its current owner ($$$$$)!

73 and good luck!

Subject: Heathkit DX35 tranciever; Antique wind-up Morse code training thing

Thesed items are for sale for $50 each.

The DX35 has Q-mult and antenna
multiplier with
it. This transciever has crystals that you plug intothe back; comes with
lots of crystals. I do not know enough about trancievers to see if it
works - the tubes light up.

The morse code trainer comes with the paper tapes with holes...some new
tapes with no holes!

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Subject: HELP PLEASE! - Old RCA Senior Volt-Ohmist

I thought I might be able to restore the above after getting it in
a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened
it to find a corroded Alkaline 1.5v cell soldered in place. While
the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at
a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get
infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

dharper@kumc.wpo.ukans.edu

> good.

Mike-

I currently use the TS-50 with the AT-50 in my car. There are about 15
people ahead of me on the AES/Orlando waiting list for the IC-706, with a

shipment expected in about a week.

I wonder what is involved in using the AT-50 with the Icom? I would think you might at least need a special cable.

I agree with your comment about the TS-50's SSB filter. I plan to get the narrow SSB filter for the Icom's narrow filter position, with intent of possibly installing it in place of the existing filter. If this works out, I would then get a CW filter to go in the narrow position. Does this sound feasible?

Date: Sat, 21 Oct 95 23:50:52 -0500
From: mlazaroff@delphi.com
Subject: Need help with ignition noise problem...

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

From: jlowman@netcom.com (Jim Lowman)
Subject: Opinions wanted: new newsgroup .forsale

Dan Brown (danb@a.crl.com) wrote:
: jlowman@netcom.com (Jim Lowman) wrote:

: >1) While rec.radio.swap is the correct place for such ads, it is not
: >specific to amateur radio equipment.

: From other discussions I've seen, this was intentional--amateurs use
: lots of non-ham equipment (Motorola UHF and VHF business-band radios,
: for instance). Most of the stuff I've seen in r.r.swap would be
: appropriate in a group in the .amateur hierarchy, either because (1)
: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that
facilitates the operation or maintenance of an amateur radio station - would
be "on topic." This could include, but not be limited to, test equipment,
replacement parts, commercial gear that could be converted to operate on the
authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is
fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my modified Atlanta kit. ;-)

I'm searching (actually for my old pa'..., IN3EYU) the electric schema
of an old Rx used by U.S.Army in Europa during II W.War.
It is the BC453 made by Western Electric and ranging from 190 to 550
Khz.

Any news about it?

many thanks, in3myp

The Meridian XL GPS does have a computer interface, the cable is available from Magellan for approx. $80, or can be homebrewed.

Not to be simplistic here, but can't you just turn down the volume on the VFO
that you don't want to hear.. there are separate volume controls for
each VFO...

Jay Maynard (jmaynard@admin5.hsc.uth.tmc.edu) wrote:

: It's not a problem for you at Netcom, but I can guarantee that continued
: forsale postings here _will_ make the group go away at many sites.

I have to admit, I was unaware of this problem until late in the discussion.

: During the reorganization that produced the current rec.radio.amateur.*
: groups, it was proposed that the .swap group be placed in the .amateur
: hierarchy. The consensus was that that was a Bad Idea both because hams swap
: equipment that isn't necessarily ham-specific, and because folks other than

: hams swap ham equipment. The group's placement where it is was both
: deliberate and the consensus view.

Well, even after a year, things change. I started another thread, offering
to propose the new group rec.radio.amateur.forsale, which I will check next.

BTW, I am not proposing that we dump the .swap group, only that we create a
new newsgroup that would be used for buying, selling and trading amateur
geam and related items, such as test equipment, tubes, etc. I am not saying
that this is the only answer, just that we should examine the situation as
it exists today.

Subject: fixing swan 250c

I bought a swan 250c about a year ago fram a ham in TX that swore that
the unit worked "the last time I turned it on" wellllll it got here and
didn't work. Being a student I didn't have the money to fix it (and
really, I still dont) Is it worth fixing or should I be looking at a new
mfj 6 m rig?? and who would I even contact about fixing it ?□are there
people that fix these older units at a reasonable cost - I still have
education bills to pay!□□

thanx
mark

From: Mike Lubrecht <flowmole@accessone.com>
Subject: IC-W31A Mods?

I just bought a new Icom IC-W31A (my first ham radio on my new
technician-class ticket!) and am interested in finding out any
modifications to extend the receive range: particularly mods. that
just involve keypad inputs/system resets. I would also be interested
in hardware mods to increase the TX range, if they're not too difficult.

Either E-mail me (a preserve bandwidth) or post - I haven't seen much
info on the W-31A, so there may be others who are interested.

Thanks!
Mike

Subject: Opinions wanted: new newsgroup .forsale

Dale Chidester (chideste@xvnews.unconfigured.domain) wrote:

: Why do people have such a problem with using rec.radio.swap? Is it that they don't
: know it exists? rec.radio.swap is intended for radio sales of all types, CB,
: amateur, SWL, etc. Who needs another news group? Educate the users! FS and WTB
: belong in rec.radio.swap period, end sentence.

It probably is that they do not know that .swap exists, because it is
outside of the rec.radio.amateur.* hierarchy. I, for one, would prefer to
have a newsgroup that was dedicateed to sale/trade/purchase of *amateur*
equipment only. What is so wrong with creating a new newsgroup with a more
specific purpose?

Obviously, continuing to repeat the same dogma has not made the problem go
away. Maybe nothing will.

>
>1) While rec.radio.swap is the correct place for such ads, it is not
>specific to amateur radio equipment.

Sense this mess started I have been paying more attention to
rec.radio.swap. Most of the post do seem to relate to amateur radio
equipment or at least to equipment that could be used by hams.

>
>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

I agree. The normal convention for such groups on the internet seems to
be forsale.

Also, as has been pointed out, rec.radio.swap does not follow the
rec.radio.amateur naming convention for newsgroups related to ham radio.
If someone is looking at a list of newsgroups. It does look like
rec.radio.amateur.equipment would be the place for fs posts.

>
>
If there is not a need for two such groups, maybe the rec.radio.swap
should be removed and rec.radio.amateur.forsale should take its place.

Thanks

The main reason for neutralization is to prevent the tube(s) from oscillating.
An additional side benefit is that it makes the point of maximum power output
and minimum plate current the same. Otherwise, the tuning would be slightly
different for each. Neutralization is almost always required for
grounded-cathode amplifiers, and sometimes for grounded-grid too.

Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.....

1.) The FAQ is too long and complicated to read, so it's ok to ignore it and do what ever you like.

2.) The correct way to applogize for being insulting is with another insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an inappropriate manner, my response should be it to continue doing the wrong thing on purpose to "teach my rival or subordinate a lesson" without regard for my own ill-behavior. The ability to show someone else "I don't have to listen to my underlings" would supersede maturity in this situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out effects of the grid-plate capacitance coupling in the amplifier. One of the effects of an un neutralized amplifier is the possibility of the stage breaking into oscillation. I suggest that you follow the neutralization procedure described in the transmitter manual. It's not a difficult thing to do.

"Didn't work" isn't very descriptive. What are the symptoms? These rigs are pretty simple. You can certainly fix most problems yourself. I wouldn't give up on it unless it had something like a fried power transformer or some other part that's impossible to get from a now defunct manufacturer.

This *is* amateur radio. You really should try to do more than turn the knobs on the front. Fixing old rigs is a good introduction to the workings of radio.

>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>doesn't also get screwed.
>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part
inside the tube known as a "getter", and it flashes and burns up any stray
gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a
bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout?
The digital readout circuit board was troublesome with poor solder
connections and often requires some work to make the display function.
You might want to contact Internation Radio in Port St. Lucie, Florida.
They used to publish a Kenwood Users newsletter and used to sell a
collection of the newsletter articles that dealt with the TS-820
specifically. There were a lot of shortcomings with the rig, but the
suggestions in the newletters go a long way towards making it a very good
rig. There was also an article or two in CQ or QST in the early eighties.
One of them dealt with adding the WARC bands to the rig. Not for the
feint of heart, but I was able to do the mod and it worked very well.
International Radio also used to sell good SSB and CW filters for the
rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking
in the cap is the source of ignition noise. (Of course this could
be one of those engines with no distributor, but it's worth a shot.)

Subject: New MFJ 6 Meter SSB Rig

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears
that MFJ may not be quite ready to ship the units. But that's ok;
pre-production advertising is really not that uncommon, providing the
consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP
fans. However, I am a bit surprised at their choice of bands. After having
produced a 20 meter version, I would have guessed that a 10 or 15 meter
unit would be next on the list, given that there may be a bit more
activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two articles. Quite a few of us have dopplers and when we looked at the circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all

I think you hit the nail on the head. I suspect the big problem is
that newcomers don't know about rec.radio.swap. It's not even in the
same hierarchy as the amateur radio groups. Newbies come in, see the
rec.radio.amateur hierarchy, see no forsale group, but see an equipment
group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they
wouldn't make the mistake. The Guide has lots of very useful info.
Unfortunately, the Guide is some 200+ lines in length. I wonder how

many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this
would be far more intuitive for newcomers to figure out. Perhaps a
short, weekly "charter of the newsgroups" message would be useful as
well -- provided the author signs his/her/its name. 8^{)

I have a Phillips AM-FM Deluxe radio with five short wave bands. It is
about twenty years old and has developed a whooshing noise on all bands
all the time. I live in Gainesville Fl. I don't think there is a radio
repair store in town. Can old radios still be repaired? or do I have to
junk it?

Comments from a "Stateside distributor", who has had experience both ways
...

If you buy a radio from someone you never saw before, and never expect to see again, all he is going to be interested in is getting your money out of your wallet and you on your way.

If you buy from a local (or regional) dealer, you are buying from someone who wants to see YOU happy, since he hopes that you will come back again and again, for all those accessories, mobile radios, antennas and the like that we hams always need to add to our collection.

If you bring in an oversees "Yaekenicostanco" radio, you will have NO US warranty - the American distributors warrant only those radios that they import, and quite possibly might not service them - they are completely within their rights to do so. There very well may be (as has been in the past) board or component differences between various versions of the radio destined for different countries, thus compounding the situation. (Some manufacturers have had up to five different versions of the same radio - with each version destined for a different market area, with different regulations.)

If you buy the radio from a local (or regional) dealer, you have someone you can go to with questions and problems ... but long-distance calls to Hong Kong to get answers to a question get expensive - to say nothing of "how do you ask someone how to program odd splits for repeaters into your new handy - when he is only really fluent, technically, in Chinese?"

I doubt that you will find any significant price differentials in buying in Hong Kong ... that was true years ago (I was there during the VietNam era), but not now, with the global economy/distribution situation now in existance. However, you can find real bargains in Hong Kong on things that are local-labor-intensive (like tailored suits for example).

Enjoy your trip ... take the tram to the top of Victoria Peak and let me know if the view is still as grand as it was on Christmas Day of 1972 ... and good luck to you!

Very 73,

"Squeak" Porray, AD7K
Manager, Amateur Electronic Supply/Las Vegas

ps: I hope you don't think I am touting just our company ... in the
above, I speak for the Amateur Radio community in general, and I think
that it speaks for all domestic Amateur Radio Dealers as well.

I agree with Tim. I've been to HK several times on business trips and
it is not worth the hassling of dealing with the salesmen over there
(prices are not fixed and you have to deal, yes as in bargaining!).
Also there is the problem of the warranty. I don't think any of the
major brands (K,I,Y) honor warranties of any equipment bought
overseas. What I have bought though are accessories. Bring your AES
catalog to check the price differences. Some things are cheaper there
but others are around the same or even higher depending on the store.
Another suggestion is to get away from the Nathan Rd. stores, those
are usually overpriced.

Have fun in HK.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so
this test isn't very useful for transistor rigs. Your symptom
could be the result of reduced PA gain, due to an internal
emitter ballast resistor failure, but it's probably another
cause. You might check the bandpass filter switching in the rig
for the two highest bands. And you might want to look at the
drive level from the low power stages. A hint to where the
trouble may lie would be whether this condition appeared
suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing
power foldback due to VSWR on the two highest bands. Are you testing
into a known good dummy load? No tune rigs won't work well at all
using a lightbulb for a dummy load. It's not even close to their
design output impedance. Lightbulbs work fine as crude loads on
the older rigs with tune and load controls, but not on the no tune
rigs. They have to see the right impedance, or they'll foldback
power.

Subject: FT-11R Sub-audible tone NOT!

I have a friend here in Atlanta who has a FT-11R that
you can hear the CTCSS (should be sub audible) tone.

On very good repeaters, the tone noise is quite loud,
and at best annoying.

I have a FT-51R which does not have this problem.

Are there other Yaesu FT-?1R users with similar experiences?

Is there any adjustment my friend might make on his FT-11R?

Thanks,

Victor KF4BUX Gregg

: however, the 900 mhz band does not rxcv as it does on a friend's
: FT530. --==> snip

This is as it should be ... Congress passed a law several years ago that
made it illegal to manufacture (if domestic) or import (if from overseas)
any receiver that receives, or can be modified to receive, cellular
telephone conversations ... following up on the Electronic Privacy Act,
which makes it illegal to actually receive cellular telephone
conversations themselves. This prohibition went into effect in April of
1994 ... stocks on hand could be sold off, but nothing
imported/manufactured after that date could be sold. There is no
modification possible on these receivers, since the law was very specific
in making sure that modification was impossible. If 800 MHz receive is
important to you, your only hope is to find a radio made or imported
before April of 1994 (i.e., pre-Lot 20 for an FT530), and hope you want
it more than its current owner ($$$$$)!

73 and good luck!

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Subject: HELP PLEASE! - Old RCA Senior Volt-Ohmist

I thought I might be able to restore the above after getting it in
a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened
it to find a corroded Alkaline 1.5v cell soldered in place. While
the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at
a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get
infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

dharper@kumc.wpo.ukans.edu

> good.

Mike-

I currently use the TS-50 with the AT-50 in my car. There are about 15 people ahead of me on the AES/Orlando waiting list for the IC-706, with a shipment expected in about a week.

I wonder what is involved in using the AT-50 with the Icom? I would think you might at least need a special cable.

I agree with your comment about the TS-50's SSB filter. I plan to get the narrow SSB filter for the Icom's narrow filter position, with intent of possibly installing it in place of the existing filter. If this works out, I would then get a CW filter to go in the narrow position. Does this sound feasible?

From: mlazaroff@delphi.com
Subject: Need help with ignition noise problem...

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

From: jlowman@netcom.com (Jim Lowman)
Subject: Opinions wanted: new newsgroup .forsale

Dan Brown (danb@a.crl.com) wrote:
: jlowman@netcom.com (Jim Lowman) wrote:

: >1) While rec.radio.swap is the correct place for such ads, it is not
: >specific to amateur radio equipment.

: From other discussions I've seen, this was intentional--amateurs use
: lots of non-ham equipment (Motorola UHF and VHF business-band radios,
: for instance). Most of the stuff I've seen in r.r.swap would be
: appropriate in a group in the .amateur hierarchy, either because (1)
: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that
facilitates the operation or maintenance of an amateur radio station - would
be "on topic." This could include, but not be limited to, test equipment,
replacement parts, commercial gear that could be converted to operate on the
authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is
fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my

modified Atlanta kit. ;-)

Subject: SB 220 hook up

I am buying a sb 220 and want to hook up to my kenwood ts690 will the relays in the rig handel the sb220 ?

Date: 23 Oct 1995 21:28:18 GMT
From: pepperh@demo.bb.unisys.com (Hugh M. Pepper)
Subject: W2a audio going down (was: HELP - Icom ICW2A Speaker Connection)

In article <DGq88o.9BA@inter.NL.net>, geertj@ripe.net (Geert Jan de Groot) says:

>Repairing the W2a is easy (I did so several times), though diagnosing
>is difficult. Before you open the unit, do some tests like:

>- really verify if the problem is both VHF and UHF

Yep, problem is on both VFO's.. weak audio output on UHF and VHF.

>- Connect external speakers to both jacks and test again.

Yep, still weak audio, on internal and external speakers.

>- Does a quick powerdown/powerup restore audio levels?

If you key the mic very quickly, upon returning to receive, the
audio is louder, but then quickly goes back to very soft.

>- DO you notice distortion?

Yes, when the volume control is increased, the audio sometimes
even breaks up.. high distortion..

>It may be a capacitor going soft, but then again, it may not.

An SMD cap?? I have the schematics that came with the HT, but not
the service manual.. sounds more and more like a trip back to ICOM,
unless I can be fairly sure of the offending parts to take a chance
at replacing them. Even at that.. I would probably have to go to ICOM
for the parts anyway!!

>I do NOT recommend working on the unit if you can't take ESD precautions,

You mean grounded tip soldering irons right!!!

>if you don't have the maintenance manual, or if you are unconfortable
>working on 0102 SMD's. And remember NOT to transmit if the casing
>is not installed (the back side is the cooling).

Thanks for all the insight... And here I thought these radio's
would work forever!!!

From: KGTS43A@prodigy.com
Message-ID: <46ie1b$1t18@usenetw1.news.prodigy.com>
Source record: 211041

As I recall, this was a problem with the FT-11 without the ctcss decode board option. Buying and installing this board changes the way the tones are generated.

Or so I recall...

>been in more Ham Radio dealers in my life.
>

I would like to add to this thread - I was there not too long ago and I got the feeling many stores were more "communications" stores. They had ham, two way, commercial HF, you name it. Whatever you wanted, whoever you were, they were happy to sell it to you. Perfectly legal, of course, as it would be in the US, as long as you didn't try to use it here, or in HK. I suspect the HK government keeps after toursts trying out their new toys before they leave!

I also found the HK shop keeper's to be the nastiest, most disinterested, discourteous S.O.B.'s I have EVER run into. It was so bad I asked my hotel manager what I was doing wrong. He said "probably nothing", adding "being Caucasian and wanting less than 10 of anything was not a good combination for many sales people; a serious problem in HK". All of this right after visiting Tokyo where the HAM (REAL ham) stores where SO polite and friendly I literally could not believe it.

Mine hasn't got that that many hours, but it's doing a fine job so far.
What I wanted to add is that it puts out 9.5 watts on 13.8 volts and

over 6 watts on 12.2 volts. This would seem to fit your desires.

Subject: FLAMES

I'd like to take this opportunity to thank all who sent me tons of mail suggesting that I take my ad about the T-T linear to another list.

My point: Once, maybe twice, would have been sufficient to call my attention to the error of my ways. Obviously I do not belong on this list nor will I ever be here after this posting.

The flip side: I am a radio hobby press journalist. I have a column in Monitoring Times, several of my feature articles have appeared in QST and CQ in the last year. I also have authored several books on ham radio. Rest assured, when it comes time to recomment any USENET groups or mailing lists, I will not mention this one.

Thanks for a wonderful time.

Not to be simplistic here, but can't you just turn down the volume on the VFO
that you don't want to hear.. there are separate volume controls for
each VFO...

Jay Maynard (jmaynard@admin5.hsc.uth.tmc.edu) wrote:

: It's not a problem for you at Netcom, but I can guarantee that continued
: forsale postings here _will_ make the group go away at many sites.

I have to admit, I was unaware of this problem until late in the discussion.

: During the reorganization that produced the current rec.radio.amateur.*
: groups, it was proposed that the .swap group be placed in the .amateur
: hierarchy. The consensus was that that was a Bad Idea both because hams swap
: equipment that isn't necessarily ham-specific, and because folks other than
: hams swap ham equipment. The group's placement where it is was both
: deliberate and the consensus view.

Well, even after a year, things change. I started another thread, offering
to propose the new group rec.radio.amateur.forsale, which I will check next.

BTW, I am not proposing that we dump the .swap group, only that we create a
new newsgroup that would be used for buying, selling and trading amateur
geam and related items, such as test equipment, tubes, etc. I am not saying
that this is the only answer, just that we should examine the situation as

it exists today.

Subject: fixing swan 250c

I bought a swan 250c about a year ago fram a ham in TX that swore that
the unit worked "the last time I turned it on" wellllll it got here and
didn't work. Being a student I didn't have the money to fix it (and
really, I still dont) Is it worth fixing or should I be looking at a new
mfj 6 m rig?? and who would I even contact about fixing it ?□are there
people that fix these older units at a reasonable cost - I still have
education bills to pay!□□

thanx

From: Mike Lubrecht <flowmole@accessone.com>
Subject: IC-W31A Mods?

I just bought a new Icom IC-W31A (my first ham radio on my new
technician-class ticket!) and am interested in finding out any
modifications to extend the receive range: particularly mods. that
just involve keypad inputs/system resets. I would also be interested
in hardware mods to increase the TX range, if they're not too difficult.

Either E-mail me (a preserve bandwidth) or post - I haven't seen much
info on the W-31A, so there may be others who are interested.

Thanks!
Mike

Subject: Opinions wanted: new newsgroup .forsale

Dale Chidester (chideste@xvnews.unconfigured.domain) wrote:

: Why do people have such a problem with using rec.radio.swap? Is it that they don't
: know it exists? rec.radio.swap is intended for radio sales of all types, CB,
: amateur, SWL, etc. Who needs another news group? Educate the users! FS and WTB

: belong in rec.radio.swap period, end sentence.

It probably is that they do not know that .swap exists, because it is outside of the rec.radio.amateur.* hierarchy. I, for one, would prefer to have a newsgroup that was dedicateed to sale/trade/purchase of *amateur* equipment only. What is so wrong with creating a new newsgroup with a more specific purpose?

Obviously, continuing to repeat the same dogma has not made the problem go away. Maybe nothing will.

>
>1) While rec.radio.swap is the correct place for such ads, it is not
>specific to amateur radio equipment.

Sense this mess started I have been paying more attention to rec.radio.swap. Most of the post do seem to relate to amateur radio equipment or at least to equipment that could be used by hams.

>
>2) IMHO, the .forsale naming convention is widespread on the 'net, and is
>more descriptive than .swap.

I agree. The normal convention for such groups on the internet seems to be forsale.

Also, as has been pointed out, rec.radio.swap does not follow the rec.radio.amateur naming convention for newsgroups related to ham radio. If someone is looking at a list of newsgroups. It does look like rec.radio.amateur.equipment would be the place for fs posts.

>
>
If there is not a need for two such groups, maybe the rec.radio.swap should be removed and rec.radio.amateur.forsale should take its place.

Thanks

The whole reason for those messages is your anonymity. If you were to post
under your own ID, you wouldn't have this problem.

I agree with the sentiments expressed, if not perhaps the language.

>The message is still the same. Ads belong on rec.radio.swap.

Yes, it is, but you are discrediting the message by your cowardice.

The main reason for neutralization is to prevent the tube(s) from oscillating.
An additional side benefit is that it makes the point of maximum power output
and minimum plate current the same. Otherwise, the tuning would be slightly
different for each. Neutralization is almost always required for
grounded-cathode amplifiers, and sometimes for grounded-grid too.

From: w8jitom@aol.com (W8JI Tom)
Subject: ** This Group Is Not For Sales or Purchases **

Hello,

As a new person to Internet, what I've learned here is.....

1.) The FAQ is too long and complicated to read, so it's ok to ignore it and do what ever you like.

2.) The correct way to applogize for being insulting is with another insult and a touch of superiority and more name calling mixed in.

3.) If I'm doing something wrong, and someone else corrects me in an inappropriate manner, my response should be it to continue doing the wrong thing on purpose to "teach my rival or subordinate a lesson" without regard for my own ill-behavior. The ability to show someone else "I don't have to listen to my underlings" would supersede maturity in this situation, and excuse any poor behavior on my part.

4.) The people that cause or create all problems are from AOL or other easy access services. Without them, none of this would occur.

5.) This group is really not for sales or purchases.

Do I have it all correct?

73 Tom

From: Floyd Sense <sentek@nando.net>
Subject: 6146b neutralization---what does it do?

The purpose of neutralization of any rf amplifier stage is to balance out effects of the grid-plate capacitance coupling in the amplifier. One of the effects of an un neutralized amplifier is the possibility of the stage breaking into oscillation. I suggest that you follow the neutralization procedure described in the transmitter manual. It's not a difficult thing to do.

>education bills to pay!□□

"Didn't work" isn't very descriptive. What are the symptoms? These
rigs are pretty simple. You can certainly fix most problems yourself.
I wouldn't give up on it unless it had something like a fried power
transformer or some other part that's impossible to get from a now
defunct manufacturer.

This *is* amateur radio. You really should try to do more than
turn the knobs on the front. Fixing old rigs is a good introduction
to the workings of radio.

Gary

>Windows Terminal, and a few other dumb terminal programs with no luck.
>(Oh, I also tried XPCOM but couen't get it to acknowledge the tnc)
>
>Any ideas on this one?

Well you've probably got a flow control problem, though broken
hardware is also a possibility. You know you can send to the TNC,
and it behaves as expected in response to commands. Now have you
rechecked your serial cable wiring? The simplest thing when you
suspect flow control problems is to use a 3-wire connection,
gnd, TxD, and RxD only. The Tiny 2 is happy with this, but your
computer software has to be setup to ignore flow control. Procomm
lets you do that, and I expect the others do too.

If your computer has a DE-9 connector for serial use, just wire
pins 2,3,5 of the computer to pins 2,3,5 on the TNC. It should
talk if you've disabled flow control in your computer software.
When you power up the TNC, you should see the sign on banner
printed on your screen.

If your computer has a DB-25 serial connector, then you need
to wire it differently. Wire pin 7 of the computer connector
to pin 5 on the TNC. Pin 2 on the computer to pin 3 on the
TNC. And pin 3 on the computer to pin 2 on the TNC. Note that
pins 2 and 3 are reversed. Again, with flow control disabled
in your software, you should see the sign on banner print on
your screen when you power up the TNC.

If you don't see the sign on banner, then you probably have
a hardware fault. It could be the serial port on the computer,
have you tried that with some other serial device like a telephone
modem? Or it could be a problem in the Tiny 2. You'll have to
get out the test equipment and track that down.

>Dave

Not trying to defend 'ol Jimmie, but "blackened" is normal for nearly all
receiving tubes. Not always at the top, but always there somewhere. As part
of the manufacturing process, they induce a high current pulse into a part

inside the tube known as a "getter", and it flashes and burns up any stray gas, thereby increasing the vacuum. The black stuff is the vaporized getter.

If a tube loses it's vacuum, the black part will turn gray -- a sure sign of a bad tube. If that's what you have then yes, they're no good.

Subject: Kenwood TS-820

The price is good. Wonder if it's a TS-820S with the digital readout? The digital readout circuit board was troublesome with poor solder connections and often requires some work to make the display function. You might want to contact Internation Radio in Port St. Lucie, Florida. They used to publish a Kenwood Users newsletter and used to sell a collection of the newsletter articles that dealt with the TS-820 specifically. There were a lot of shortcomings with the rig, but the suggestions in the newletters go a long way towards making it a very good rig. There was also an article or two in CQ or QST in the early eighties. One of them dealt with adding the WARC bands to the rig. Not for the feint of heart, but I was able to do the mod and it worked very well. International Radio also used to sell good SSB and CW filters for the rig. They also repair Kenwood gear. 73, K8AC in North Carolina

Have you replaced the distributor *cap*. Often, carbon tracking
in the cap is the source of ignition noise. (Of course this could
be one of those engines with no distributor, but it's worth a shot.)

James W. KELLEY (jwkelley@e4e.oac.uci.edu) wrote:
: The latest QST has an MFJ ad for a 6 meter (50-50.3MHz) SSB 10 watt radio
: for $259 with a mic. Does anybody know about this one yet?

Well, we do now. After reading previous posts on this subject, it appears
that MFJ may not be quite ready to ship the units. But that's ok;
pre-production advertising is really not that uncommon, providing the
consumer is advised accordingly.

I think these little cheapie SSB/CW rigs are a great idea for the QRP
fans. However, I am a bit surprised at their choice of bands. After having
produced a 20 meter version, I would have guessed that a 10 or 15 meter
unit would be next on the list, given that there may be a bit more
activity on these bands.

From: k5qq@aol.com (K5QQ)
Subject: Radio Direction Finding gear.

The Albuquerque T-Hunters were thinking the same thing about the two
articles. Quite a few of us have dopplers and when we looked at the

circuit boards and the "stuff" in the boxes, it did not appear to be any cheaper to build than a kit doppler.

Seemed like the two designs were very creative, but when you read the process to understand if the signal was "behind" you and the way you would have to turn around etc, it seems it's not very operationally effective.

I have one of the AB5CK dopplers and it works very good. No problem at any time determining where the signal appears to be coming from. I use four of the Hustler small 1/4 mag mounts and at $17, they are great. The PIN diode and the resistor mount in the base and so I don't even have a switching box on the roof.

I have both of the DF'er used in the articles and have played with them extensively, including the approach of putting them on a rotating mast and turning the mast to the signal null. In a real world environment, the multipath is the biggest issue and to be able to look at a display and realize that is what you are seeing and to determine when it seems you have a direct signal is of utmost importance.

The bottom line is that both work very well for the end point sniff, primarily because they continue to work right up to a transmitter. The The beam and attenuator technique suffer from the signal getting into the radio when you are close.

I don't want to criticize those who are energetic and build stuff, primarily cause I do a lot of fiddling myself, but I'm too lazy to write it up!! However, I think it is incorrect to say these two designs are cheaper than a doppler. However, if their only experience in the costs of a doppler are from looking at the costs of factory assembled units, then I understand the issue.

Adios all

I think you hit the nail on the head. I suspect the big problem is
that newcomers don't know about rec.radio.swap. It's not even in the
same hierarchy as the amateur radio groups. Newbies come in, see the
rec.radio.amateur hierarchy, see no forsale group, but see an equipment
group and think this must be the place. It's an easy mistake to make.

Yes, if they read the Guide to the Personal Radio Newsgroups they
wouldn't make the mistake. The Guide has lots of very useful info.
Unfortunately, the Guide is some 200+ lines in length. I wonder how
many people actually read it. Probably not many.

I would support a rec.radio.amateur.forsale newsgroup. I think this
would be far more intuitive for newcomers to figure out. Perhaps a
short, weekly "charter of the newsgroups" message would be useful as
well -- provided the author signs his/her/its name. 8^{)

: >to Hong Kong soon and am interested in shopping for an HT. What can
: you

: >advise me about:

: I'd save myselft the trouble and buy from a stateside distributor,

Comments from a "Stateside distributor", who has had experience both ways ...

If you buy a radio from someone you never saw before, and never expect to see again, all he is going to be interested in is getting your money out of your wallet and you on your way.

If you buy from a local (or regional) dealer, you are buying from someone who wants to see YOU happy, since he hopes that you will come back again and again, for all those accessories, mobile radios, antennas and the like that we hams always need to add to our collection.

If you bring in an oversees "Yaekenicostanco" radio, you will have NO US warranty - the American distributors warrant only those radios that they import, and quite possibly might not service them - they are completely within their rights to do so. There very well may be (as has been in the past) board or component differences between various versions of the radio destined for different countries, thus compounding the situation. (Some manufacturers have had up to five different versions of the same radio - with each version destined for a different market area, with different regulations.)

If you buy the radio from a local (or regional) dealer, you have someone you can go to with questions and problems ... but long-distance calls to Hong Kong to get answers to a question get expensive - to say nothing of "how do you ask someone how to program odd splits for repeaters into your new handy - when he is only really fluent, technically, in Chinese?"

I doubt that you will find any significant price differentials in buying in Hong Kong ... that was true years ago (I was there during the VietNam era), but not now, with the global economy/distribution situation now in existance. However, you can find real bargains in Hong Kong on things that are local-labor-intensive (like tailored suits for example).

Enjoy your trip ... take the tram to the top of Victoria Peak and let me know if the view is still as grand as it was on Christmas Day of 1972 ... and good luck to you!

Very 73,

"Squeak" Porray, AD7K
Manager, Amateur Electronic Supply/Las Vegas

ps: I hope you don't think I am touting just our company ... in the above, I speak for the Amateur Radio community in general, and I think that it speaks for all domestic Amateur Radio Dealers as well.

>73, Tim ka8ddz

I agree with Tim. I've been to HK several times on business trips and it is not worth the hassling of dealing with the salesmen over there (prices are not fixed and you have to deal, yes as in bargaining!). Also there is the problem of the warranty. I don't think any of the major brands (K,I,Y) honor warranties of any equipment bought overseas. What I have bought though are accessories. Bring your AES catalog to check the price differences. Some things are cheaper there but others are around the same or even higher depending on the store. Another suggestion is to get away from the Nathan Rd. stores, those are usually overpriced.

Have fun in HK.

You need new 6146s in your IC735! :-)

Transistor finals generally don't "go soft" the way tubes do, so
this test isn't very useful for transistor rigs. Your symptom
could be the result of reduced PA gain, due to an internal
emitter ballast resistor failure, but it's probably another
cause. You might check the bandpass filter switching in the rig
for the two highest bands. And you might want to look at the
drive level from the low power stages. A hint to where the
trouble may lie would be whether this condition appeared
suddenly or had a gradual onset.

There may also be no problem with the rig at all. It may be doing
power foldback due to VSWR on the two highest bands. Are you testing
into a known good dummy load? No tune rigs won't work well at all
using a lightbulb for a dummy load. It's not even close to their
design output impedance. Lightbulbs work fine as crude loads on
the older rigs with tune and load controls, but not on the no tune
rigs. They have to see the right impedance, or they'll foldback
power.

Subject: FT-11R Sub-audible tone NOT!

I have a friend here in Atlanta who has a FT-11R that
you can hear the CTCSS (should be sub audible) tone.

On very good repeaters, the tone noise is quite loud,
and at best annoying.

I have a FT-51R which does not have this problem.

Are there other Yaesu FT-?1R users with similar experiences?

Is there any adjustment my friend might make on his FT-11R?

Thanks,

Victor KF4BUX Gregg

This is as it should be ... Congress passed a law several years ago that
made it illegal to manufacture (if domestic) or import (if from overseas)
any receiver that receives, or can be modified to receive, cellular
telephone conversations ... following up on the Electronic Privacy Act,
which makes it illegal to actually receive cellular telephone
conversations themselves. This prohibition went into effect in April of
1994 ... stocks on hand could be sold off, but nothing
imported/manufactured after that date could be sold. There is no
modification possible on these receivers, since the law was very specific
in making sure that modification was impossible. If 800 MHz receive is
important to you, your only hope is to find a radio made or imported
before April of 1994 (i.e., pre-Lot 20 for an FT530), and hope you want
it more than its current owner ($$$$$)!

From: Dick Harper <dharper@kumc.wpo.ukans.edu>
Subject: HELP PLEASE! - Old RCA Senior Volt-Ohmist

I thought I might be able to restore the above after getting it in
a lot of test equip. at a Hamfest.

Since it had some corrosion on the bottom of the from panel I opened
it to find a corroded Alkaline 1.5v cell soldered in place. While
the battery bracket looked original the cell wasn't.

The unit is AC operated with one 12AU7, and two 6AL5 tubes.

I can't get it to calibrate high enough on the DC ranges. ie, at
a 1.48v source the best I can get the meter to read is about 1.3v.

Also while I can get a zero ohms with the probes shorted I can't get
infinity on the high end.

Any idea what type of battery should be in it?
Do you think new tubes would help?
Do you think the capacitors are so old they should be replaced?
Am I wasting my time on this thing?

Thanks for reading and your thoughts. Please reply by e-mail to:

Mike-

I currently use the TS-50 with the AT-50 in my car. There are about 15
people ahead of me on the AES/Orlando waiting list for the IC-706, with a

shipment expected in about a week.

I wonder what is involved in using the AT-50 with the Icom? I would think you might at least need a special cable.

I agree with your comment about the TS-50's SSB filter. I plan to get the narrow SSB filter for the Icom's narrow filter position, with intent of possibly installing it in place of the existing filter. If this works out, I would then get a CW filter to go in the narrow position. Does this sound feasible?

From: mlazaroff@delphi.com
Subject: Need help with ignition noise problem...

I have a 1988 Chrysler LeBaron with the 2.2L
turbocharged 4-cyl engine.
I've been unsuccessful in ridding it of ignition noise
in my HF mobile setup (FT900 with screwdriver antenna).
Even the AM broadcast radio suffers from the noise.
It does appear to be ignition noise, as it is the classic
"popping" and "hash" that varies with engine speed.
There is no alternator whine. The noise is not present
when the antenna is disconnected (i.e., it's being picked
up by the antenna and not coming in thru the power leads).
The rig's power cable is wired directly to the battery with
heavy, high-quality wire.

I've done the following so far:

new resistor plugs and cables
coaxial feed-thru caps on the ignition leads and alternator
bonding straps on the engine, hood, trunk, exhaust system,
doors, fenders, and bumpers

Starting the engine increases my noise level from S0/S1
to S4/S5. It's worst on 10, 15, and 20. There seems to be
little problem on 75 and 40; the rig's noise blanker eliminates
the noise there but is only partially effective on the higher
bands. With the noise blanker off, the noise is S7 and makes
mobile operation effectively impossible.

Out of the several cars I've operated mobile from, this is the
first one (and hopefully the last!) that has defied my efforts
to
"quiet it down". Anyone out there have any ideas/suggestions
other than the obvious "get rid of it and buy another car" :)?

From: jlowman@netcom.com (Jim Lowman)
Subject: Opinions wanted: new newsgroup .forsale

Dan Brown (danb@a.crl.com) wrote:
: jlowman@netcom.com (Jim Lowman) wrote:

: >1) While rec.radio.swap is the correct place for such ads, it is not
: >specific to amateur radio equipment.

: From other discussions I've seen, this was intentional--amateurs use
: lots of non-ham equipment (Motorola UHF and VHF business-band radios,
: for instance). Most of the stuff I've seen in r.r.swap would be
: appropriate in a group in the .amateur hierarchy, either because (1)
: it is ham gear, (2) it can be modified to work in ham bands, or (3) it
: would be used in connection with ham gear.

What I would propose is that any amateur or related gear - anything that
facilitates the operation or maintenance of an amateur radio station - would
be "on topic." This could include, but not be limited to, test equipment,
replacement parts, commercial gear that could be converted to operate on the
authorized amateur frequencies - you get the idea.

: .swap, .marketplace, and .wanted are about as common as .forsale.
: Construed strictly, .forsale neglects "wanted" posts (and vice versa).
: For accuracy's sake, .marketplace seems like the best choice, but I
: think any of the four is about equally descriptive.

OK, I am not hung up on the actual name; whatever everyone feels is right, is
fine with me.

: >3) Hopefully, we could guide individuals and commercial advertisers to this
: >new newsgroup, thus restoring rec.radio.amateur.equipment to its intended
: >purpose.

: The same is true of rec.radio.swap.

: >For the record, I don't think posting of ads is going to stop, even with the
: >flaming that is going on, unless there is a channel for advertisers to use.

: There is such a channel, though.

: The only real advantage I can see to rec.radio.amateur.{swap |
: marketplace | forsale} is that it would put a group with the other
: amateur groups, while the r.r.swap is detached a bit in the
: alphabetical list. When I saw the list of rec.radio.amateur groups, I
: went looking for a for-sale group, but apparently others don't bother.
: I tend to doubt they'd bother anyway, but I'm rather cynical that way.

When I first subscribed to the desired groups in rec.radio.amateur*, I looked for a .forsale or similar group. It was not until I noticed some retailer being flamed *on the newsgroup* for posting an ad, that I became aware of the .swap newsgroup. The considerate/experienced net user would probably look for, and find, a .forsale group if it were in the same hierarchy. The clueless will remain so, no matter what we do. Even if this proposed new group does not come to pass, I would hope that we could agree to stop flaming the advertisers on the newsgroup itself. I would hate to put all the net cops in a killfile, because they might just have something worthwhile to say down the road.

> entitled "The Four-Way DFer" and "Poor Man's Doppler".

You were being kind, Tom. The "Poor Man's Doppler" is aptly named, because not only do you have a big construction project, it's built around the Ramsey DF kit which will set you back $70 before you even start. By the time all is done, you *will* be poor if you weren't before.

When I saw Malcomb present "The Four-Way DFer" at Dayton this year, I had to ask myself "Why bother?" Not to detract from his efforts, but in the end his dual TDOA is more complicated than a Roanoke and has less resolution to boot. Attempts to increase the resolution beyond the 8 compass points on the "4-Way" become immensely complicated, too, because the L-R and F-B proportioning is nonlinear and therefore has to be calculated or compensated.

Your kit version of the Roanoke is a better deal all around. I've got three foxhunting friends with 'em and they're almost as good as my modified Atlanta kit. ;-)

>Repairing the W2a is easy (I did so several times), though diagnosing
>is difficult. Before you open the unit, do some tests like:
>- really verify if the problem is both VHF and UHF

Yep, problem is on both VFO's.. weak audio output on UHF and VHF.

>- Connect external speakers to both jacks and test again.

Yep, still weak audio, on internal and external speakers.

>- Does a quick powerdown/powerup restore audio levels?

If you key the mic very quickly, upon returning to receive, the
audio is louder, but then quickly goes back to very soft.

>- DO you notice distortion?

Yes, when the volume control is increased, the audio sometimes
even breaks up.. high distortion..

>It may be a capacitor going soft, but then again, it may not.

An SMD cap?? I have the schematics that came with the HT, but not
the service manual.. sounds more and more like a trip back to ICOM,
unless I can be fairly sure of the offending parts to take a chance
at replacing them. Even at that.. I would probably have to go to ICOM
for the parts anyway!!

>I do NOT recommend working on the unit if you can't take ESD precautions,

You mean grounded tip soldering irons right!!!

>if you don't have the maintenance manual, or if you are unconfortable
>working on 0102 SMD's. And remember NOT to transmit if the casing
>is not installed (the back side is the cooling).

Thanks for all the insight... And here I thought these radio's
would work forever!!!

> specific purpose?

I think we need a very quick history lesson here:
The reorganization of the rec.radio hierarchy was undertaken to solve
and address several problems. MANY domains (particularly the .MIL) are
not/were not permitted by their charter to carry ANY commercial
postings or newsgroups... that meant NO for sale/swap groups, and
since amateurs tend to swap gear like kids used to swap bubblegum
cards (in my youth ;^) there needed to be a logical division.

That division was created, and rec.radio.swap was created. It is
dominated by, but not limited to, amateur equipment, and is outside
the hierarchy to make it easy for the many news admins to *include*
the rec.radio.amateur.* groups, while not carrying the rec.radio.swap

It made sense to the assembled multitude, and only seems to come up
when new college semesters change over and large numbers of new and
inexperienced people gain access to the UseNet groups, OR when some
inconsiderate or clueless person posts a for sale in a discussion
group. Making a different hierarchy for amateur for sales will NOT
solve this problem, nor will it cure cluelessness... those are given.

And a *GENTLE* nudge in private email probably makes a great deal more
sense as a mechanism for educating the educable among the clueless.

> Obviously, continuing to repeat the same dogma has not made the
> problem go away. Maybe nothing will.
Certainly nothing short of public beheadings will do! ;^) There is
only one "solution" for ignorance: education... and, in order for
that to happen and be effective, the teacher must be patient (hardly
the norm on UseNet ;^) and the student willing (ditto ;^)

Adding YANG (Yet Another News Group) is NOT the solution. Good manners
might help even more.

Icom has just announced a new HF transceiver with DSP in the receiver
section. It has two tuning dials, and lots of other goodies.
Obviously a receive only version is not far behind. Anybody know about it?
Price, delivery, specs?

3448. Kenwood TM-742a w/UT28s

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-25 00:00:00 UTC
From: Robert H&#65533;yvald <72242.477@CompuServe.COM>

Source record: 210938
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,uk.radio.amateur

To ALL:
I have a TM_742a with the UT-28s module installed. I also have
done the expanded TX/RX on the unit. The unit works fine except on
the 10M side. It seems that the unit can TX up to 45mhz, but it
will not RX over 30mhz. I sent the unit to Kenwood Service Center
East and they said it is up to specs. The problem is that I need
to receive freqs. at 33.94 and lower. I can tranmit there but I
don't need that I just need to receive. These are fire bands and
going to the fire calls without having a scanner in the car would
be a great help.

Is there anyway to fix this problem???
ANY HELP IS GREATLY NEEDED!!!

THanks Robert H&#65533;yvald, KB2UWJ

Jim Lowman (jlowman@netcom.com) wrote:

: For those of you who have been following the lengthy threads related to the
: posting of "for sale" or "wanted to buy" items on
: rec.radio.amateur.equipment newsgroup: I would like to make a proposal that
: may solve the problem. While I am willing to do the legwork on researching
: the formalities to proposing a new newsgroup, I would like to hear some
: opinions, yea/nea votes, ideas, etc. before doing so, to determine if this
: action is warranted.

Jim, et al,
After reading this posting and the follow-ups, the thought came
to mind that perhaps the name

rec.radio.amateur.fleamarket

might be appropriate. After all, a good number of us (perhaps most) will
instantly associate this name with used equipment that individuals are
offering up for sale to the public, much the same as in a real, live flea-
market. The word "market" is there for those searching for just those
groups. Somehow, the name "market" by itself implies commercial operators
offering new (yuck = pushbutton) equipment.

I agree wholeheartedly that the present rec.radio.swap deserves to
be relocated within the rec.radio.amateur grouping, and would probably do a
lot to reduce, but not completely eliminate, the FS and WTB postings that
are placed inappropriately.

Is it possible to simply rename the existing group? I don't claim
to know how this newsgroup jimcrackery works, so please don't flame me.

Since my earlier review, I have had a chance to carry out some further tests, and hope this may be interest.

If there are any questions or comments, please e-mail me.

73s, Alf NU8I/G4ABB
Scottsdale, AZ DM43an
alf@agreen.iac.honeywell.com

Mobile operation: I had several qso's on 6m and 2m SSB, using vertical antennas out to about 40 miles or so. The noise blanker did a very adequate job, cutting the ignition noise down from abt S7 to where it was still audible but not moving the meter. Weak signals, also not moving the meter, were copiable with no problem. I had earlier commented on the lack of audio from the internal speaker, but in practice that was not a major problem. 50mph+ with the top down in my convertible the audio was quite readable. It would have sounded better with an external speaker, but my fears that an outboard audio amp would be needed were unfounded.

2m receive performance: I used the rig as the downlink receiver for AO-13, and was very pleased with the performance. Without any external pre-amp, it performed at least as well as my other rigs, that have given good service over the years. I dont think anyone would be disappointed with its sensitivity. There have been quite a few comments about the '706 being deaf on VHF. Although this is the case for general coverage above about 130MHz, it certainly is not true for 144-148MHz.
The filtering used is most definately a benefit in rejecting out of band interference. There are a couple of stretches of road near collections of commercial antennas where my HT is completely useless. Driving through there, I could hear NO effects of inter-mod on the '706.

Low frequency receive: Although the published spec says it goes down to 300kHz, it does in fact receive all the way down to 30kHz. I didnt have access to a calibrated generator for that band, but it did appear to be quite flat between 100 - 300kHz, with a fairly steep drop-off below 100kHz.

Accessory output: There is an analog output on the rear accessory connector that indicates the band in use. It DOES include a level for 6m, but not for 2m. The voltage level is as follows:

MHz volts
0-2 7.4
2-4 6.1
4-8 5.1

```
8-11 0.1 (out of sequence, not a typo)
11-15 4.1
15-22 3.2
22-30 2.2
30+ 1.2

--------------------------------------------------------------------------------
```

It's much more likely that the GPS/computer interface does NOT utilize the
strobe signal provided on more costly receivers but not on the cheap
ones. It takes some time after the time code signal is received to decode
it and send it out an RS232 port. The strobe pulse gives you the exact
beginning of the NEXT second beyond the one whose identity you just
received, and it is corrected for propagation delay.

>should be removed and rec.radio.amateur.forsale should take its place.

Mark, I think you are correct to suggest that a rec.radio.amateur.???
group would be more appropriate. I discovered rec.radio.swap only after
seeing the controversy generated by FS postings here. If I hadn't seen
the controversy, I would have posted myself, since the assumption that
.equipment is relevant to the purchase and sale of equipment seems valid.

However, I would stay away from a .forsale group, and instead suggest a
.marketplace. Most .forsale groups frown on WTB postings (or have two
separate newsgroups. Here in Chicago we have chi.forsale and chi.wanted),
and .swap doesn't seem to cover everything, while a .marketplace
encourages a broader form of trade. The best example of how wide open and
yet regulated a .marketplace newsgroup can be is
rec.games.deckmaster.marketplace, which is probably one of the most
heavily trafficked newsgroups on the Net.

Furthermore, rather than e-mailing the person who does post FS notices,
perhaps we should wait and see what happens. It seems that there is
enough talk about FS postings in other threads that a person who
subscribes to this newsgroup for about a week will pick up on the
disctinction. Perhaps a weekly posting of the FAQ and a weekly posting of
the suggestion that all FS postings be taken to rec.radio.swap would be
all that is necessary.

So, here's my vote for rec.radio.amateur.marketplace.

I have a pair of FT-470's, an FT-411, and a pair of RS HTX-202s. I have no
svc manuals. I have an interesting request for assistance (yes, I can call
for tech support, but thought I'd pass it to the user community first).
I run these handhelds on 7.2 volt batteries, meaning 2 watts high, 1 watt low.

The 1 watt is too high for most applications, in my opinion. How can this
power level be adjusted DOWN, even a little bit? 50 milliwatts would be
great for hamfests and such, and 1 and 2 watts are SO close the difference
just doesn't matter.

Any suggestions?

Unfortunately. But since that is one of only 2-3 small complaints I have with
the radio, I consider myself lucky :-)

It does suck having to scan 2 meters 5kc at a time, cause as quick as you can
say over-deviation your radio will stop 5-10 kc short of the center frequency
you want to hear- requiring you to stop the scan, by pressing up/down,
assuming you are using the stop scan mode- or wait a few seconds for it to
move if you are using the pause mode (I hope I'm using Yaesu's terminology
correctly for the scan modes).

3469. Re: IC-706 HF Rig Features

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-25 00:00:00 UTC
From: aust@gandalf.sp.TRw.COM
Message-ID: <9510251621.AA13185@noldor>
Source record: 210959

Well gang, I have played with my NEW Icom IC-706 HF Rig HF/6meter and 2 meters rig and I can so it is awesome, neat, keen, etc.

I used it on Break-in CW QsSK on 20 meters and it was fun. The rig has an internal electronic keyer, vox, and a far better menu(pull down) that the Kenwood TS-50.(TS-50 lacked in this area) In the Menu, you do not have to guess (Memory 33, what is that, and grap the manual). At first, its seemed a little complex, but Icom did some human engineering on this rig, so that as long as you know how to access each menu, its all in simple text to set up things, no criptic codes, like the TS-50.

WOW, what a radio. This radio has a Spectrum Scope, which is super, I was on 20 meters last night, and thought the band was dead, I could look over a 15KHz, 30KHz, 60KHz, 150KHz, 300KHz, and I believe in 1MHZ bandwdths around my center frequency and could see signals above and below me at 11:00pm at night, when I thought the band was dead. By seeing the vertical traces(Spectrum Scope Feature) on the LCD screen, I pressed the Spectrum Scope marker and tuned the radio IC-706 right on to to these stations. WOW, thats great, I traded in my Kenwood TS-50 for this rig, and I am not at all unhappy with it. The only unhappy folks may be those with TS-50's, wishing they had an Icom-706!!. What more can I say. I am quite pleased with the New IC-706.

Out of Band the General Coverage reciver 30Khz - 120Mhz worked grat with all modes, even hearing CW beacons in the Aircraft band, 124.3 aircraft approach on AM,etc.

I even tried this rig on 6 meters SSB and talked to New Mexico from California.Heared some meter CW beacons on the Band also. Next I went to 2 meters used it on a few repeaters (yes, it has all the CTCSS PL-tones built in) and SSB around 144.1-144.2Mhz. No Intermod at all with a 7-element Beam on it. Worked from Los Angeles to Bakerfield, then San Jose, California from the Los Angeles, California.

This rig worked as good as my Kenwood TS-50, but even better. It looks like Icom did a great job with this one, took all the headaches about the TS-50 and made sure that the NEW Icom-706 HF/6m/@m mobile rig out did the TS-50, and I agree that Icom did their homework on this new rig.

After chasing DX, I listened the FM broadcast band 88-108MHz with its Wide Band FM detector, and its not bad at all.

I think a lot of HAMS(Radio Amateurs) out there will agree that this Rig will set a new presidence for the the next generation of HF rigs for the HAM market.

One HAM came over to my QTH and his comment, how did Icom do it, put so many featues, frequencies into that tiny box. The rig is actually smaller than the Kenwood TS-50. He has a TS-50 , TS-60, and a Kenwood 9130 @ meter all mode. At the end of the evening, he was going down to the nearest ham store and get one of the New Ic-706's HF/6m/2m alll mode rig's. He also wants to sell his TS-50, TS-60, and 9130, anyone interested???

I believe Kenwood will have some trouble in pushing their TS-50/TS-60 rigs now, and all I can say, if you don't quite believe this, go to your nearest Icom dealer and check this rig out. Most dealers can't keep them on the shelf, and only get a few at a time, having prepaid for one put you on a higher list to get your hands on one, they seem to disappear the same day they arrive in the store. If you get a chance to see one, check it out!!

All HF bands/6meters/2meters, all mode for ~$1250, a lot less than a TS-50, TS-60, and 9130 combination.

So far I would say the front runner is the Icom-IC-706, followed by the Alinco DX-70, then the Kenwood TS-50. I believe Kenwood may have to rethink about the TS-50. the Icom IC-706 leaves this rig it the dust!!

Congratulations to the folks at Icom, WOW what a neat little rig!!!!

73
Mike
W6TRW

P.S. Would like to hear from other New Icom-706 HF/6m/2m users out there.
What are your impressions of this New Rig!!!

Probably not the right newsgroup for copiers, but hams are known to
experiment with different kinds of electronics :)

Can anyone direct me to where I can find the following?

Minolta Copier style EP 310

which needs a "heater lamp".
Panasonic s/n HL-178

Have even tried the local Minolta repair shop with no luck.
If you have some good ones lying around gathering dust
I might be able to help you get rid of them.

Bill (KA2CKI),

My club has one and it works on 160 without a mod, and it handles at least
1 kW because we run a linear at 1kW through it. Although it has terminals
for balanced feedline (i.e. ladder line) I would recommend using unbalanced
line (hard line if possible). We had some RF getting back into the shack,
and switching to hard line seemed to help a lot. Although the situation was
specific to our shack since we couldn't run the ladder line without touching
brick and pipe at some points (which is the main reason why we switched).
Hope that this helps, it's about all I know. I have had good luck with
ours.

I doubt that this is a reed relay. They are quit quiet. My Swan has one, can't
hear it. I've also worked on equipment with as many as six relays - all noiseless.
Most likely it is a standard frame relay.

>If the offet is adjustable, does the sidetone track it? What about spotting
>provisions?

I own an ICOM 765 but I've used an 850SAT and I love it on CW.
If I had to do it again, I would probably buy the 850 instead
of the 765. It has adjustable CW pitch and the sidetone tracks
(I had to mod the 765 to add tracking sidetone). The filters
sound fine (they sound like JA-built crystal filters) and the
full QSK is clean. I like the 765's user interface a little
better, but the 850's is fine once you get used to it.

>i.e. transmatch... Has anyone modified one to 160m?

I use a Dentron Super Super Tuner out of the same series. The SST is
rated at 3KW and covers 160-10m. I don't remember much about the ST,
but the power rating on mine is noted on the front panel, where it
clearly says "3KW". Ask the owner if there's something similar on his.

Also, mine uses a multi-tap coil and switch, not a roller, and I's sure
the ST is the same.

The tuning circuit is a T network, and the SST also came with a 4:1
toroidal balun (that I promptly smoked with my SB-220).

The potential for adding 160m will probably depend on how much space is
available inside the case for a larger inductor. You may also need to
replace the switch with one having more positions. Ask the owner about
the switch markings - mine is labeled A - R (23 positions).

3490. 6146b neutralization---what does it do?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-26 00:00:00 UTC
From: MUENZLERK@uthscsa.edu
Message-ID: <01HWW0HGC4TU000ERF@uthscsa.edu>
Source record: 210854

Bob Tomas (tomas@ra.cgd.ucar.edu) wrote:
: What does neutralization of a pair of 6146b tubes do?

: bob

Wasn't this on the Novice test at one time?
Depending on the inner capacitance of the tubes and frequency
neutralization circuits may need to be used. This is done by
coupling a small amount of the output back to the input of the tube.
By the nature of a tube this is 180 degrees out of phase with the
input. This in effect cancels out the unwanted, in phase, feedback
that is generated by the amplifier circuit thus preventing oscillations
that would generate unwanted signals and possibly destroy
or severely overheat the tube.

Hope this helps.

Kevin, WB5RUE

sb220 ?
>
>>>>
No, the relays in the TS-690 will not handle the high voltage(120dc), & high current of the sb-220's relay
keying supply, you must put a 12vdc relay inline to key the amp, rated at 1 amp, should do it.
From the accessory plug on the back of the rig you can find 12vdc on TX, use this to key the outboard
relay, then use one of the contacts on the OB relay to key to SB-220.

Mine does too. According to a Yaesu rep, the micro could be changed to
fix the problem if you want to send it in. To me, it's not worth the
time. Does that mean the newer ones are fixed; don't know. I think
my FT8500 does that too, yuk. I guess we'll all have to go to 20kHz
spacing. :(

My opinion? Drop the idea of 434 for portable work. I tried it.
Trying to get an NTSC AM signal anywhere requires a big linear amp (at
least 50W - class A, or a good class AB, and a long yagi that has to
be broken down to even fit in my van. Then still you may or may not
be able to overcome the interference with local packet, radar and
everyone else on that band.

With 1.2 FM, an efficient 10W class C amp and a small corner reflector
will get you a clear signal out for MANY miles. Tx time is extented
'cause you are only using about 1/10 as much current. The quality of
FM is hard to top also.

The ONLY advantage of 434 is any cable ready TV set can be used to
recieve it while 1.2 FM takes a few more bucks.

Good luck, and above all have fun. --Mike KD6PKJ

Hi Scott, hmm - don't have my manual here at work with me but I think my Ft470 puts out 200mw on low power. 2 watts is hi with 7.2v batt and 5w with 12v. Pretty sure the 411 is the same.

3499. Opinions on Yaesu FT-990 as CW Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-26 00:00:00 UTC
From: jgardner@netcom.com
Message-ID: <jgardnerDH2nCu.Cu5@netcom.com>
Source record: 210863

I recently posted an article asking about how well the Kenwood TS-850S performs on CW. I've narrowed my choice down to the TS-850S and the Yaesu FT-990.

I have the same questions for the FT-990:

1) How well does the full-breakin feature work? Does it chop elements?
2) Does the sidetone track the adjustable offset?
3) How about filters? Especially narrow CW filters.
4) How about spotting provisions?

The last question is very important. Anyone who's ever seriously persued DX on CW knows that accurate zero-beating is extremely critical. I've never had a transceiver before; I've had Collins twins and Drake twins and both of these have very good zero-beating facilities. How does the FT-990 accomplish zero-beating and is it accurate?

My Dentron ST has a sticker on the back...check yours... mine says:
model 160-10AT 1KW.
The inductor is switched, not roller type.

Quoting from the instruction manual (2 pages !) it says:

"The Dentron 160-10 AT Antenna Tuner (transmatch) will couple a 160 - 10 meter Transmitter to almost any type antenna system."

I could fax you the two pages if you like.

BTW, I paid abt $60 for mine,used.

One good program I use here is called XPKAM. It is sold by XPWARWE and is much more advanced than Hostmaster. Possibly HM has improved since I got my copy 2 years ago. HM did'nt have the robot cq feature at the time. Also, another good one is KAGOLD. It is similar and both sell for a goodly some of about $70 or so.

...
: The 1 watt is too high for most applications, in my opinion. How can this
: power level be adjusted DOWN, even a little bit?

There is a circuit for the HTX-202 in the back of the Owner's Manual.
It looks like RV2 feeds back rectified r.f. from the final to decrease
the gain of earlier stages. The 1W/5W switch pulls this voltage toward
ground in the high power position. I bet if you play with the
adjustment of this pot you'll find you can reduce your low power
output turning it one way or the other.

The reason for small discrepancies is simple -- the CPU in your typical GPS knows the time at a level of a fraction of a MICROSECOND -- it has to in order to compute positions at the 10's of meters level. However it knows this only after it has munched on the timing information it has received from the GPS satellites. It then takes care of its critical tasks, and then finally gives the time and position to the user. If it is sending its time out the RS232 port in NMEA format, it may take as long as a second to output all the NMEA messages at 4800 b/s.

Some of the small OEM receivers (I'm particularly aware of the Motorola ONCORE and Trimble SV-6) have options (usually at extra cost) which will output a precision time pulse once/second. In the case of the Motorola unit, when the receiver is configured for optimum time-keeping, the precision and accuracy of the 1 PPS signal is at the 30-50 NANOSECOND level. For the past year I have been working on a Motorola-based GPS timing clock which yields this kind of performance routinely. I have dubbed my clock the "Totally Accurate Clock", partially as a takeoff on Heath's old WWV-based "Most Accurate Clock", since the TAC is something like 4 orders of magnitude (yes, 40 dB!) better and I needed a word that conveyed a 40 dB improvement (and in part as a joke since TAC are my initials).

: The Meridian XL GPS does have a computer interface, the cable is available
: from Magellan for approx. $80, or can be homebrewed.

The Meridian (non XL) has a RS232 similar interface with NMEA protocols. The connector is an unusual one (Megallans own presumably) and apart from doing the data interfacing it is also used for external power supply.

The interface/power cable is not very good value but a good homebrew version would be difficult. I think the interface is output only, so you can't load in waypoint or route data UYKB.

I don't know about SMC, though another Yaesu dealer claimed to know nothing
about the problems with the FT-5200 when I took the rig back to them last
year.

Yaesu Head Office definitely know; I copied a plethora of postings from
rec.radio.amateur.misc referring to various subsets of the same problems
on both the FT-5100 and the FT-5200

I only have one speaker connected, but it basically sounds like one of
the same faults that mine has (all the time, not intermittant), and was
one of the faults commonly discussed by other owners in rec.radio.amateur.misc

> I've filed your reply for future reference although I really do feel like
> forgetting this on and cutting my losses.

Me too. Yaesu UK have said that the rig is in spec, so that's the end of it. I just wish they'd come clean and own up to the fact that there are a large number of very dissatisfied FT-5100/5200 owners out there, instead of trying to sweep the problem under the carpet - if nothing else though it highlights the value of Usenet. Without it, I'd have believed them!

Hello all,

I have been looking for a few weeks now about modification information about this Radio!! Non of the many ham radio mod sites have anything about this radio.

Could someone... anyone, please post anything they know about modifiying this radio to receive 800 Mhz..

What I have learned so far:

- Cutting W1 will enable 118 to 136 MHz rx

- There is a bank of 8 suface mount diodes on the logic board under W1, 4 on the top row, all diodes installed, and 2 more diodes installed out of 4 on the bottom row. When these 2 diodes on the bottom row are removed (leaving no diodes on the bottom row) this enables expanded TX on UHF and VHF.

- There is supposed to be a mod available which involves running another piece of coax into the radio which will enable 800 Mhz reception. Does anyone have any information about this final modification, or the keypad prodedure to enable the VFO to scan these frequencies!!!

Please Respond If you have any information...

Hugh -

>> (You and I know damn well that's poor screening causing the audio stage
>> to take off but try telling them that).

I got this twice ! - Both times intermittent coming through the
internal speaker.

First time around, the rig went back to my local dealer, it was then
forwarded to Yaesu UK. The rig was less then 6 months old, and to say
I was unimpressed is an understatement. 2 weeks later it came back,
and it seemed okay at first, but of course, as the fault is intermittent
and I don't use 50 W on 2m very often, I didn't realise that it was still
there.

Excuse: Dry joints.

A couple of months later I noticed that it was still there, and took it
back. This time the rig was away for 6 weeks, and less than a year old.
I went into see my friendly local radio dealer, who all of a sudden were
not so willing to be helpful. A case of "We have your money now piss off",
I felt. They gave me Yaesu UK's phone number and told me to contact them,
(see my feelings about the dealer above). I did this and was told as said
in here, that because the rig was in spec, it could not be replaced. The
local dealer wasn't interested, because they would not have got a
replacement rig from Yaesu had thay given me a replacement themselves.
I had to phone this man at Yaesu several times at daytime rates, the
call not being local either, I had no use of the rig for 6 weeks, and
all they could do was say "Well we are looking into it, but as the fault
is intermittent we are finding it difficult to replicate the descibed
problem" and "...as the rig is operating within spec, we cannot replace it".
Christ, these people must be tight as arseholes, you would have thought
that after 4 weeks without any success most companies would have said
okay we will give you a replacement, but obviously not Yaesu.

Excuse: The PA block in this and some other Yaesu rigs is prone to
oscillation, we think that is the problem. We blew up your original PA
during testing, so it has now been replaced.

Well thank christ they blew it up ! The only thing that's not covered
in the Yaesu warrenty are the power semiconductors. I thought it was
most reassuring to know that not only the FT5200 suffered with this
oscillating PA problem !

>> 2) Bleedover of sub-band audio into main-band speaker while TX'ing at high

I've only used the internal speaker so far, but I'll have a look at this
with mine when I have time.

Yeah, and me too. I could stand the fact that the rig went wrong,
(it happens) but I didn't think that I got anywhere near receiving a decent
service from Yaesu UK.

If I used 2m/50W a bit more often, I wouldn't be surprised to find that
the fault is still there (have not used it for ages now).

Personally I have decided to steer clear of Yaesu products in future.

Cheers and 73, Ian G0TLB.

Yes, the Magellan Meridian has a computer interface. It requires a special cable from Magellan. I think the protocol is NMEA, but I don't know the physical pinouts on the cable.

I have the Magellan Meridian, and it works ok for a handheld. Becuase it has few buttons, the interface can be tedious.

Though I just got my amateur license, I don't know what APRS is.

Greetings,

Some time ago my IC-2410-H was stolen from my truck. I've been off the air for nearly a year as a result. However, living in Oklahoma, and entering the fall monsoon/tornado season, I'm starting to miss it again!

To cut to the chase:

I'd like to purchase a "Good" (read "excellent"!) Icom mobile. In NO particular order, the features I'd like are:

1) Dual band VHF/UHF.
2) Lots-o-memories (100's would be nice! I'm spoiled by my AOR-2500!).
3) Cross-band xmit/rx.
4) Illuminated mic -- has Icom figured that not-so-minor feature out yet?! Yeasu, and others have!
5) Freq agility (tx/rx out of band mod with some ease - soldering & nipping ok, chip re-programming - ixnay!)
6) Auto-dial memories (the more, the better!).
7) RF Power out - something in the 45-50W range would be nice.
8) Variable attenuator -20db or BETTER?!
9) Built in diplexor would probably be nice - like 2410.
10) I really liked the 2410... something with comparable or better specs would be nice.

I'm pretty sold on Icom... soo, what's their current top few rigs (Don't want anything TOOO elaborate like a 901 or whatever the remote sys was called)? What are the street prices, and who's the cheapest mail order outfit?

Many thanks for helping to "reactivate" me!

>It is a big step >for me and a pretty hefty price, so I wanted
>some info about them.

John, I own a 3K Classic-X. It's a great amplifier, but I'd never buy an amp with a roller inductor again. If you chase DX and have to QSY to another band quickly, it's a royal pain retuning when seconds mean the difference between trying to get a rare station with only a few contenders versus an unruly mob. Just my $.02 worth. 73, John, NJ0M.

3518. Re: IC 706 - TX Audio problem?

Newsgroup: rec.radio.amateur.equipment

Source record: 210994

Well folks, the jury is in ... I received numerous private replies about the IC 706 and ALL users were extremely happy with their 706's. There were no reports of audio problems or any others for that matter. So, if someone has had a problem it is indeed rare and not inherent to the radio. Looks like I may need to get on one of the waiting lists ...

>Along with the question posted above, I have also heard that the
>neutralization procedure can be performed using a "grid-dip meter". Is
>this factual, and if so, please explain?

>Thanks,

>Robert/KJ7BO

Bob, This assumes the input is a tuned circuit that has separate tuning controls from the output network.

You can do this by coupling the GD meter to the input tank (RIG IS OFF) at the desired frequency. Leave the input tank tuned to resonance, as evidenced by the dip in the meter.

(RIG IS OFF) Tune the output tank through resonance. If you see a change in dip, the circuit is out of neut. Adjust the neut cap until the pulling effect is minimum. remember to re-dip the input after the neut cap is adjusted, but to NOT touch it while checking for pulling by the output tank.

A second method is to use the GDO as a signal source (RIG IS OFF), and look at the tank output with a RF sniffer (receiver). Peak everything for max signal and adjust the neut cap for lowest signal level while re-peaking controls.

The method I use is to feed a RF generator into the output port, and look at the voltage back at the driver output with a scope. I peak everything for max signal, and then dip the signal with the neut cap.

Some points, lack of neut does or can do the following:

Increases IMD (splatter)
Decreases stability (may oscillate)
Distorts the CW envelope (key clicks)
Makes tuning and adjustments touchy
Lowers efficiency

Neutralization stops or reduces unwanted feedback from the output to input of a stage. At some tuning settings the unwanted feedback is in phase. A bit of the output adds to the drive.
At some control settings the effect is nil.
At other control settings the feedback can subtract from the drive signal.
That's why the results of poor neutralization are so unpredictable.

The problem you are having with the Kenwood TM-241 is a common one related to poor design...the connector that mates the front together with its internal board is sometimes intermittent. If you take both hands and gently twist slightly it usually will fix the problem for a while...

I'm not familiar with the TR-751 but may have similar problem...Kenwood has been having many problems lately with poor solder connections, bad runs of components etc. Too many new rigs being offered and no consideration of the high cost of parts inventory which has been suffering lately...Many hamfesters are becoming uneasy about buying used Kenwood rigs and finding out parts are no longer available..I am speaking from experience of myself and others I personally know. Also the high price of repair (in the hundreds, not including shipping..30-50 bucks each way for 850,940 etc) and then hearing rig cannot be repaired for lack of parts or their dropping tech skill level (they can't keep up with the Kenwood Rig of the Month Club Tech School). Unfortunately the price of speciality and miniaturization is proprietary components available only from Kenwood...when gone or tagged for warranty or new production the return letter is "not economical to repair-parts no longer available"...I have been a faithful Kenwood buyer for years---but not anymore...If I buy a radio for 2000 plus bucks I would like to know it can still be repaired a few years down the line even if I just want to use it for a spare..

> get the same result?

I have the same problem. I ended with 5 kHz step size. Not very logical
when one wants to use the scanning function.

Also:

Does anybody uses the DTMF autodialer? When the radio is in this mode, one
cannot use the keypad to send access codes. BTW how are we supposed to
erase a DTMF number from memory?

What about the low battery alarm? The radio is smart enough to tell you
the battery voltage and even the model of battery pack used but the low
battery alarm is set to 4 volts. That is ok when using the 4.8 volts
battery but much too late when using the 7.2 or the 9.6 volts batteries

With your spec requiring HF as well as VHF then are you looking for a TNC that offers modes other than just packet?
If this is so then you could consider:

Kantronics KAM
AEA PK232MBX
MFJ 1278

OR you could be more wide-ranging and get:

1. TNC for packet on VHF and
2. Dedicated HF multimode equipment such as BMKMulty software and Multyterm interface - see http://cs.nott.ac.uk/~ibx/BARTG/Sales/

Regards, Ian G4EAN@GB7BAD or ibc@cs.nott.ac.uk

3537. Icom IC-25H

Source record: 210877

Hey All,
A few months ago I purchased a (used) Icom IC-25H 2-meter tranceiver. I've been using it at home for packet and local repeaters and have been quite pleased with it.
The only problem that I have is that the manual that came with it was for a 25-A. This isn't a big problem, because the only major difference between the two his output power. (25 W for the A, 45 for the H). There is however a minor difference in the back panels. My radio has a phono plug labeled Back Up that isn't mentioned in my manual.
Could someone tell me what this does? Also, are there any other differences that I'm not aware of?

Thanks,
-Ross

>430 Mhz.
>
>What do you think?

I think you'll do even better on 2.3 GHz. That's near where most
TV news trucks operate (a source of surplus equipment). The
antennas needed to control multipath are smaller and handier than
at lower UHF. You can even do manpack reasonably well, though that
works better with an even higher frequency unless you have an assistant
to handle the antenna. (We've used a Golden Rod, attached to a paint
roller extension handle, carried by an assistant, but it's better
if you can mount everything right to the manpack. Then you can
operate one man band fashion.)

We usually use K band for manpack applications. A gain slot
vertical mounted on the manpack, and a small dish hand tracked for
the receiver, works well, even on convention floors. However, a
circularly polarized antenna, like the quadrafilar helix, works
better. First reflections are opposite circular sense from the
desired signal, so you get good cancellation on that.

The big problem with portable, especially manpack, TV transmission
is ghosting caused by multipath, so you want to use a frequency
where you can control that while having the smallest possible
antennas.

BTW a very popular 2 GHz CP antenna, made by Nurad and called
the Golden Rod, is simply made up of fender washers (about 4.15 cm
outside diameter) mounted on a 5 foot piece of all-thread (3/8 in)
with jam nuts, and housed in a yellow piece of fiberglass tubing.
You can make your own for a few bucks. Just chuck the fender washers,
start with 2 inch washers, in a drill using a bolt for a mandrel
and dress them down with a file to the desired diameter for each
director. The only tricky part is making the driven element and
the phase splitter (Nurad used one by Mini-Circuits). The driven
element is made of PC board with dual polarity feed. You can use
PVC pipe instead of fiberglass for the cover without much extra loss.
If you're feeling high buck, you can copper plate the washers, or use
actual copper or aluminum washers, Nurad just used hardware store
steel washers and they work Ok. The antenna is end mounted to a
flat aluminum plate which serves as the reflector (and also as
a mount and heatsink for the PA).

A 1 watt signal can easily go 20 miles, and the 10 watts we normally use in the trucks, coupled with the 50 foot pneumatic masts and high receive sites, gives us 50 miles range while still having a video SNR of 48 db, IE broadcast quality transmission. We mount the PAs on the antennas, and use flexible cable (just plain old RG-9) down to the 1 watt exciter in the truck.

You want switchable polarization sense on one end of the path so that if you don't have line of sight you can use a bounce shot. You can bounce the signal off a tall building, a water tank, or even a mountain face in many instances. That sort of thing is very unwieldy to attempt at 70 cm. The required antennas are far too large for portable work.

Up at K band, it's far too expensive to make much power, so that's limited to a few milliwatts and short range, less than a mile with 2 foot dishes. But that's often just what you need to relay a manpack signal back to a truck for relay to the station, or to track a rover on a convention floor (or the sideline of a sporting event).

>From the accessory plug on the back of the rig you can find 12vdc on TX,
use
>this to key the outboard
>relay, then use one of the contacts on the OB relay to key to SB-220.
>
Or use this:

220 keying--------c
b-----------1k ohm----12 v positive
rig keying----------e

NPN HV
Connect a 10 k resistor from B to E of the transistor also.

This limits the voltage to 12 v at the rig, and has no moving parts. If
the rig can not handle the 20 to 40 mA of keying line peak current, a
buffer can be added to the rig connection of the above circuit like this:
e-------to NPN's emitter in
place of rig
new rig keying---470 ohm---b
c-------gnd
PNP (like 2N3906)
again also put a 10k from e to b on this one.

Does the same thing with no extra relay to wear out, and now has almost no
relay current!

Tow comments:

You need to fix the DC voltage problem first and then the ohms problem. Try new tubes first, and that will probably do it. If not, check the power supply capacitors to see if they are open.

This may fix your ohms problem at the same time, but if it doesn't:

All of those old vacuum tube volt meters had essentially the same circuit, using a 1.5 volt carbon-zinc battery as the source of voltage for the ohms circuit. If I remember right, the alkaline type has a slightly lower voltage (I don't have any on hand to test this, but am pretty sure). Replace it with a real carbon-zinc type and see if that fixes it the ohms problem.

Good luck!

Yes I noticed the same thing with the 9.6 volt pack..no warning that the pack is low. Why bother putting a low battery indicator in if it will only work with one pack???
Otherwise, a great radio..I'm willing to put up with a few of its minor quirks..it will suck down a 9.6 volt pack though fast if you do much transmitting at all at high pwr.

Hi Eduardo:

I played with the Kenwood 870 next to the Kenwood 850 at our local HRO store for about an hour on 20 meters in the middle of the day. It was relatively crowded.

I liked the 870, it is a neat radio. The filtering is very similar to the slope tuning with display of the old 940, but implemented as DSP in the "4th IF". I believe we could not use the noise reduction simultaneously with the carrier killer. The filtering seemed effective, and the controls were laid out well.

The 850 with all the filters seemed to hear anything that the 870 could (same antenna). It handled QRM about the same, too. I was there with a ham who had the money in his pocket for the 870 and was about to walk away with one (he already owns an 850). He was quite anxious to buy one. After we had used the two next to each other under the same conditions, he decided to stay with his 850. The 870 is a "better" radio, no doubt, but it was not a big enough difference to be really noticed under the sorts of conditions he works with (crowds on 20 meters on SSB and on CW) We just could not find anything that the 870 could hear that the 850 could not do just as well to our ears.

Steve,
Thanks for the info on where to find the 706.
I have been waiting for this rig since I first heard rumors
of it.
I called my local Dealer, and they have a 2-3 week waiting list.
I ordered one from Ham Station, and it should be here Tuesday.
I do feel guilty about not supporting my local dealer. I always
buy from them, unless it is something they don't have, even if
the price is a little lower someplace else. I try to do my part
to keep them around. It is so convienient having them in the same
city.
Can't wait to try out my 706.

A friend is considering a replacement for his current car and would like some information on RFI problems with the new onboard computers.

He is interested in vehicles from 1992,3,4,5,6.

Of particular interest is people's experiences with Saturn, Honda, Nissan, Geo, Toyota and Infiniti automobiles. I already know about the September 1994 QST article and the March 1995 lab notes column.

He currently plans a 2m/440 HT installation using the cigarette lighter for power (with icom power filter) running 5 watts but will probably either add an amp to get 30-40 watts or buy a mobile rig with 50 watts some time in the future. HF operation mobile is not likely.

Please respond directly and I will summarize to rec.radio.amateur.equipment if needed.

Thanks again!

I am interested in purchasing old mechanical calculators and slide rules.

I collect the old electro-mechanical "rotary" calculators that were made by Friden, Marchant, Monroe, and other manufacturers from the period of the 1900's through the late 1960's. I also collect non-electrical mechanical calculators. I am not interested in adding machines that print on tape or electronic calculators.

If you have an old mechanical calculator or slide rule collecting dust in a closet, please send me an e-mail message.

> daveph@ix.netcom.com

Yes, it is tomorrow (10/29) in Westminster, MD. It is at the Agricultural Center, off of Smith avenue. I don't have the flier in front of me, but here are the basic directions:

The AG center is on Smith Avenue, off of MD Rt 32. Coming from the north, you would want to get onto MD rt 140, going east into Westminster. Then take Rt 32, which is a right turn (also called Main Street). (This takes you through town. It isn't the fastest route, but it works) Continue on rt 32 out of town, and Smith Avenue is on your right. Alternatively, continue on rt 140 throught town, and take a left onto Center Street, this will put you onto rt 32 South. There are some signs up in town pointing you to the Ag Center, which is adjacent to the Farm Museum.

Note: This is *not* a large hamfest. I'll be going, but then again, I live in Westminster and it's 7 minutes or so away.

Chris

From: scibelli@ix.netcom.com
Message-ID: <46sdnk$a56@ixnews4.ix.netcom.com>
Source record: 210818

When I run my IC-735 directly into a oil can dummy load no problem. 100 watts out and 1 to 1 SWR as measured by the rig's meter on 160 thru 10.

However, run the rig through my Heath SA-2060A ATU and I have problems. Running the rig through the tuner in the bypass position to the same dummy load gives different power and swr readings on some bands. All is ok on 160 thru 15. On 17 I see a slight pickup in the swr using the rig's meter; the swr rises to about 1.3 to 1, but is still 1 to 1 on the Heath. On 15 the power readings start to drop to around 80 watts as measured on the Heath and 90 on the Icom. SWR reads 2.5 to 1 on the Icom and 1 to 1 on the Heath. On 12 the power readings are around 30 watts with either meter. SWR reads over 3 to 1 on the Icom, and I can't get a full scale deflection on the Heath to get a reading. On 10 I read about 5 watts using the Heath and 25 with the Icom. SWR can't be measured on the Heath and reads well over 3 on the Icom. That's about it. I built the Heath and it worked fine till recently. The controls in the Heath sensor unit were factory preset and I've never fooled with them. Just had a local rag chew on 10 using the tuner and the fellas said no way does it sound like 5 watts.

I'm thinking it's the wiper in the antenna selector switch, but would this manifest itself on only some bands? Any help is appreciated. BTW, I did spray some Deoxit on the switch but to no avail.

For what it is worth I agree with Steve N4LQ, After using Hostmaster
II Plus for the last couple of years - I switched to XPKam and think
that it is twice as good a programe It is written by Gary Johnson you
can get a copy of his programe from ftp.indirect.com pub/www/gjohnson
you can run the programe for 100 trys before haveing to register it
good luck 73 Bob Carscadden VY2RO rcarscad@atcon.com

I think it's a question of taste. On 20M, I would imagine that you would get good reports...clean, easy to understand, cuts through the noise. On 80M (exceptions of course) I would expect reports like...clean, cuts thru the noise, but somewhat pinched up. I have a friend who got one and he really sounds pinched up...even when he moved the carrier point down (by the adjustment in the menu). I don't like it....but when he goes mobil, I will be glad to be able to understand him in the noise.
I had an Icom 735 and it had a solder pad adjustment in the mike amp inside the rig to allow more bass response in addition to a transmit tone control on the rear. It was really pinched up right out of the box. I just figured that Icom is into pinched up communications sound.

I built it the other evening as my first project also. Rad Shack has a nice little plastic project box with internal mounting posts and PC board that is just the right size. The components fit nicely on the board and you can do the wiring on the bottom. I ran my power feed harness across the bottom of the board and the ground across the top. Cut two little holes in the end of the box for the power leads to enter and exit. Watch out when you wire for you may have to jump and if so it is possible to get the jump so high that it touches the metal box base or gets squashed back onto the wire that you are jumping and shorts the box.

>the ac bypass capacitors and filter capacitors need replacing.

As a teenager in the late fifties, with no money, I picked up an S38-C
version of this radio, and spent many, many hours Shortwave Listening.
I have many fond memories of it, and managed to pick one up in
mint condition at a ham swap fest, for $30. BUT, as already
suggested, it is not worth spending a lot of time or money restoring
one, unless for you there is some other motive, such as
sentimentality.

They were very simple radios, and I wouldn't even consider one for
shortwave listening today. I remember that I had to use an external
RF amplifier to get it to "hear" most DX stations.

One of the weaknesses of the design is that the filaments of the tubes
are wired in series, and if one goes, they all stop "lighting up". A
really bad "feature" is that the pilot lamp for the dial is wired in
parallel with the filament of the rectifier tube, and IF THE BULB
BURNS OUT, THE FILAMENT OF THE RECTIFIER TUBE
ALSO BURNS OUT! After this happens to you a time or two,
you may lose any fond feelings you might have for this radio .

Date: Sat, 28 Oct 1995 01:06:29 GMT

We've created a new email list devoted to homebrewing tube transmitters
and receivers (and associated equipment): Glowbugs. This list is a sort
of subset of the intersection of the Boatanchors and QRP lists.

To subscribe send an email to: listproc@theporch.com and only write:
subscribe glowbugs <your name>
and to unsub only write:
unsubscribe glowbugs

To send a message to the entire group use the address glowbugs@theporch.com

Topics include building with tubes, tube theory, xmtrs, rcvrs, power
supplies, antennas/leadins/tuners, skeds between members, homemade
components, parts suppliers, radio history, and anything else related
to the magic of Firebottles. Even for-sale/wanted-to-buy ads related
to tube gear are welcome.

For those of you into the "Heavy Metal" Boatanchor tube gear, then
don't forget the wonderful boatanchors@theporch.com mail list; to sub
send an email to listproc@theporch.com and only write:
subscribe boatanchors <your name>
and to unsub write:
unsubscribe boatanchors

<snip>

: Though I just got my amateur license, I don't know what APRS is.

I think it means Amateur Position Reporting Service, and is a system or protocol for relaying positions, usually from GPS, by ham radio and plotting them on maps. On 2-meters it uses standard packet radio methods, and is often run on 145.79 MHz. It also operates sometimes on the HF bands. A chap named Bruninga or Bruniga (sorry, forget his WA4 or WB4 callsign) originated it and has written most of the software for it. The current models of most ham TNC's (Terminal Node Controller) have special provisions for executing the protocol automatically.

Folks,

Thanks much for your input. I leave for Hong Kong soon and don't expect great deals. I've secured an Amateur Electronic Supply catalog and will shop cautiously. I didn't even consider the warranty issue and I'm much obliged to have had it brought to my attention.

I am surprised that nobody really seemed to mention the possibilities and benefits of expanded frequencies. Perhaps you're all old timers who've gotten the modifiable radios (like my friends), or you don't really care to listen in on the verboten bands. Regardless, I'll have an HT on returning from HK or I'll get one here soon thereafter (likely the latter).

I might have mentioned that I have been to HK once before, so I know generally what to expect. I'll have a few more sharp suits and memories of the stunning views.

Thanks,
Mike

>
>
> Could someone round up all the mods for the IC706 and post them here.
> I have seen so many posting asking for mods and no responses. I need them
> myself as well as many others.

The reason for the lack of response is that most mods are readily available on CD-ROM and in paper publications, and most hams know that there are many who simply are too cheap and lazy to do their own work. These people merely spend 20 seconds composing a post and assume that everyone else will do their work for them. Thus, you may be out of luck in having someone do a bunch of research, "rounding up all the mods" and then posting them just so you can find the one you want. Although you might find some retirees who are looking for something to do and may get cracking on your order.

In this case, I assumed that you were one of the few who did *not* fit the above description, and simply cannot figure out any way to get the info yourself. Therefore I looked in some material here, including CD-ROMs, and have yet to find any mods for the'706. What kind of mod are you looking for? I have some older reference material that I can check.

3585. Experience with DR-610T or FT-8500 ??

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-29 00:00:00 UTC
From: mcnerney@tiac.net
Message-ID: <470glf$mnk@sundog.tiac.net>
Source record: 210825

I am interested in purchasing a 2/440m dual band transceiver. In reading the article which compared a number of these units in the
November issue of QST, I was attracted to the DR-610T and the FT-8500 - primarily because of their extended receive capabilities.
Because the 8500 appears to offer more features (e.g. RS232 connection), I am leaning toward it. Opting for more features might,
however, result in a compromise in basic quality. I welcome any insight you can offer into either unit.
thanks!

>What type of HAM equipment do I need to communicate with Europe?

First you need a liscense. You must learn morse code at 13
words per minute. Go to radio shack and buy the book "Now you are talking".

>What type of antenna or satelite dish do I need?

Ideally, you need a "beam" antenna on a 50-100 foot tower.

>How much do I have to invest in equipment?

Many spend $10,000. You could do it for less than a $1000.
However, you may have to wait about two years. We are at the
bottom of the sunspot cycle and things are at their worst,
It only recently started to start back on the upside.
For $1000 you could get a older tranceiver and put up a
inverted V antenna made of wire. A beam on a tower is
MUCH better, but will costs several thousand more.

>What is the latest technology on HAM equipment?

There are tranceivers that cost $5000 alone.

>Thank You, Please contact me from e-mail.

>430 Mhz.
>What do you think?
>Steve
>nv7v@burgoyne.com

HI Steve! 1.2 FM will be better video (at times), due to it's being FM
as opposed to the AM video on 430, but the range will be much shorter. A
yagi and clear point to point line of sight is much more critical on 1.2.

I'm building an ATV repeater here, with it's output on 427.25 AM and
inputs on 910.25 AM and 1277.25 FM. I suspect the video will be a little
better on 1.2 FM, but the range will be better on 33cm AM.

Hi Everyone,

I'm building a device like the Kansas City Tracker & Tuner and I am trying to figure out the computer interface for the Yeasu G-4500B AZ/EL Rotor. I've called Yeasu, but they don't have any written specs. I tech support person was nice enough to fax me the schematic of their GS232 box, which provides a RS-232 interface to the rotor.

What I need to know is the voltage range of the el & az positions indicators and how much current I need to drive the step up/down & left/right controls.

It should be a neat project. I'm using the Parallax Basic Stamp2 chip with two National Semiconductor ADC0831 A/D chips and a Maxim 233 TTL to RS-232 converter. This little device will receive the azimuth and elavation and doppler shift via an RS-232 port on my PC, and then it will position the antanna and tune the radio. I'm writing a little windows program which gets all this information from WinOrb using a DDE interface. If anyone is interested, let me know.

Thanks,
Kory

3594. IC-706 on batteries?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-29 00:00:00 UTC
From: raf@dwroll.att.com
Message-ID: <DH8EEq.JMD@bigtop.dr.att.com>
Source record: 210834

I am interested in purchasing an IC-706, and wondering if any of you have tried to operate it off batteries, rather than a power supply or in a car with the alternator charging.

In the past, I have experienced problems with some radios "FMing" on SSB, especially if the battery is not 100% charged. SSB is probably the most difficult mode for battery operation, because current drain (and therefore voltage) varies constantly.

Thanks in advance for any reports. Newsgroup or e-mail are good for me.

>thinking that 1.2 FM would work best with portable equipment rather than
>using 430 Mhz.

One other thought- if eventual thoughts of a repeater are in mind. Mid American Coordination Council is tossing the idea around of kicking all the repeaters off 420-450 by 2000, forcing them up to 1.2 and up (well some brave types may stop at 902 on their way up....).

The Iowa Rpt council, which is a MACC member, for the time being is taking the proposal under advisement with the general feeling being that we are not crunched for spectrum badly enough to kick ATV off 420 by year 2000 or by eliminating all new coordinations, but it may happen eventually (hell, if the FCC croaks there may be no ATV in a few years :-(

3597. NEEDED! Manuals for Icom, Azden....

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-29 00:00:00 UTC
From: rearl@ro.com
Message-ID: <4712na$kgp@central.ro.com>
Source record: 210837

Looking for service manuals on the following rigs:

Icom 228H 2m mobile
Azden PCS 4000 2m mobile

Service manuals would be nice, but I will settle for just schematics, azden has VCO problems, and Icom was lightening struck. I would be appreciative of any help you can give. I also would be glad to re-imburse you for any expenses, ie copying, and/or shipping.

thanx Rick (KC4UII)

3598. DSP for Powerline Noise?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-29 00:00:00 UTC
From: charles.plunk@vdim.com
Message-ID: <9510300654032315@vdim.com>
Source record: 210838

Hello All,
I am looking for information from anyone who has had experiences
with the use of DSP filters for 2 meter FM and 2 Meter FM Packet to filter
power line noise coming from power lines exterior to my house. I have
been through the process of trying to get the power company to help, and
after much persistence,gave up on this route. At times the noise is bad
enough to make 3/4 scale voice unpleasant to copy and packet unprintable,
but when the noise ceases (usually late at night and during a rain)
voice is clear and weak packets are printed. Any recommendations on brands
and models used would be appreciated. Thanks 73 de Chuck WD4OZN.

3599. Icom IC-706 MARS/CAP Mod (here it is!)

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-30 00:00:00 UTC
From: kg7fu@aol.com
Message-ID: <472rsh$ej@newsbf02.news.aol.com>
Source record: 210753

MARS/CAP Modification for ICOM IC-706:

Tools required:

1) #0 Philips head screwdriver
2) 10 - 15 watt pencil tip soldering iron
3) Magnifying glass
4) Tweezers

Remove the TOP cover by removing three philips head screws on the top
and one on each side. Move the speaker bracket out of the way. Locate
D-59, this is a three terminal SMD diode in an SOT package, about
1 x 3 mm (with the radio front panel oriented towards you, D-59 is
located in a row of SMD diodes just to the right of the ribbon cbale
header above the 9 MHz SSB filter FL-30. There are pads for 5 diodes
with only three installed. D-59 is the second from the left).
Useing tweezers and a low-wattage soldering iron (and magnifying
glass, if necessary) remove D-59 by appplying some heat to the single
leg side of the device while lifting gently, then apply heat to the
other two legs and removing the device. Be careful not to apply too
much heat, not to rip or burn any traces or not to leave excess solder
on the PCB.

Replace the speaker bracket and top cover. Apply power and reset the
microprocessor.

TX = 1600 kHz - 54.00 MHz and 118.000 - 174.000 MHz

> 10ga for .40/foot (min 25 feet) in 25-99ft lengths.

I bought CE's 10 guage for my applications. It arrived about 3 days after
order, and is very nice wire - easy to handle given that it has so many
tiny strands making up the 10 guage size.

If you want something REALLY heavy, sears sells automotive jumper cables
that use 6 guage twinlead (altho the two wires aren't color coded, it's
no big deal). Not the cheapest way to go, but for that mobile KW.........

>Both seem to be good folks to do business with, from my experience.

I'd agree.

>better on 1.2 FM, but the range will be better on 33cm AM.

Best wishes on your repeater plans, but I'll have to disagree on your conclusion regarding the range of the different bands. One of our local ATV repeaters here has a 2.4 GHz output, and uses 3 different inputs: 434 AM, 910 AM, and 1255 FM. From the same location transmitting to the repeater, it takes far more ERP to obtain the same Q4-Q5 picture on 434 than it does on 1255. In fact, I have yet to see anyone put a *REAL* Q5 AM signal into the repeater, and yet it's done all the time on FM. So much is the difference, that as the users here can afford it, more are switching to 1255 FM. It's the nature of the FM signal. It maintains a higher quality picture with less power required.

Hardly anyone here uses the 910 input, so I can't give a A - B comparison with the others, but because it's AM I would suspect the same results.

Good luck, and keep us posted on how your repeater is progressing.

I ordered 12 and 10 gauge red-black zip cord recently from The Wireman,
Inc., and have been very pleased. It is quite flexible, considering the
size. They also had smaller sizes available, and the cost wasn't too
bad. I have their number as (800) 727-WIRE (9473) in the latest QST.
I have no affiliation other than they are the only place I could find
my zip cord.

Ooh, I think I found it. I had left the carrier control all the way down so that there would be very little RF coming out when I tested to see that the T/R was right. I left it that way and the antenna tuner can't really work with the carrier control all the way down. I cranked it up a bit, and now things seem fine. Nice mod, really helps on receive.

Clark:

I did the tuner mod on my 440 many years ago and have never regretted it. If the tuner is working differently on transmit now than it did before you did the mod, you obviously did something wrong. It does not affect the transmit operation at all. I would triple check your wiring. Ignore the Gordon West instructions for a bit, dig out the diagram of the tuner, and TRACE the leads to be sure you understand why the wires go where they do. If you are non-technical, have someone else do it, someone who will for sure understand what is going on. The mod I did was the one circulated on packet when the 440 was still a new radio, at least 6 years ago. I have no idea whether the West mod is correct or not, but can say the one on packet worked just fine.

Now, if KW would only put better components in the tuner!

By the way, check out my mod on the fan circuit. It works great too. Want slower AGC? Just did mine. Really like it. :)

Mike,
Unfortunately, the is a belief commonly expressed on the newsgroups
that wideband RX capability excludes intermod rejection, and this just is
not true. I have two Motorola rigs, which receive from 130-170mhz and
440-470mhz, respectively, and they are essentially bulletproof. I also
have a Standard C5718DA and a C568A, and while they're not as good as the
Motorolas, they ARE MUCH better than most other commercially made amateur
rigs. Motorola, and to a lesser degree, Standard, are designed to
accomodate wide RX coverage while giving the user protection against
unwanted intermod.
The real enemy of amateur gear is not wideband RX, but poor
design. Manufacturers DO NOT have
to dispense with front end filtering to achieve wide coverage, but they
do. My C568A HT has a combination 14 bands pass filters and the C5718DA is
even better. Why doesn't Yeasu do this? You'd have to ask them, but since
the Standards are about $80.00 more than the Yeasus, I'd say it was a cost
issue.
I find it frustrating to continuously read about how one has to "chose"
betwwen intermod rejection or wideband RX. This is a false dichotomy
foisted upon unwitting and inexperienced amateurs by disingenous
manufacturers trying to maximize profit by selling poorly designed
equipment. Until amateurs realize this, and quit buying the junk thrown at

them, it'll continue.
73,
Scott

3610. IC-706 ALC Setting

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-30 00:00:00 UTC
From: frederick.mckenzie-1@kmail.ksc.nasa.gov
Message-ID: <frederick.mckenzie-1-3010951103430001@k4dii.ksc.nasa.gov>
Source record: 210764

I was stepping through the manual of the IC-706, trying all the tricks, when I came to the item about checking the ALC. At first, I thought my microphone must be bad, because there was no ALC indication for any setting of microphone gain. Then, I noticed that the Power Output meter was reading upscale on voice peaks, so the microphone obviously wasn't defective. (I speak into the microphone with it brushing my lips.)

It turns out that the IC-706 is voltage sensitive. I had been using the car battery as a power supply, without the engine running. When I hooked it up to an AC supply, there was some ALC indication. A further check found that the ALC is also frequency sensitive. In other words, I could get a slightly higher reading on 160 Meters than on 10 or 6 Meters, using a good dummy load.

Regardless of test conditions, I was never able to get an ALC reading that came close to the upper allowable setting. A microphone setting of about 5 had about the same ALC reading as a setting of 10. I would think that some amplifier had saturated, and no further output was available for additional input.

Although the radio appears to be functioning in all other respects, its ALC response may be a symptom of a problem. Has anyone else noticed this effect, or do I have the unusual radio? Does anyone have the capability of exceeding the recommended ALC reading? Could this be the cause of the reports of "pinched transmit audio"?

Squeak,
I aggre with you. Buy from a U.S. dealer, you may save 10%, but if you break it, that 10% saving will vanish real quick. Kenwood won't even touch the radio, you end up buying a service manual, hoping you can fix the problem, if it a well know problem the manufacturer knows about, they won't even talk to you about it.
Its like buying a new car with no place to get it serviced, I don't think thats a real bargin. Would you buy a car, appliance where you can get it serviced.
The prices of these hams rigs are getting up there in price, but to get a small savings, later to need service, and not getting it is really stupid to me.
Again, would you buy a new car, appliance, knowing you can't get it serviced here. A lot of new radio's even have bugs, but some manufacturers are goods on fixing them with CPU upgrades, etc.
I seen this with Kenwood, Yaesu, and Icom. Take you Hong Kong HT in an they won't touch in in the U.S. most of the time.

Sounds like you have the problem surrounded, but there is no way
to be sure exactly what the problem is. Before you reach for the
soldering iron, try these:

Measure the power supply voltages to the op amp.

Measure all the other DC voltages in that part of the circuit.

Inspect all the solder joints under a microscope for possible opens.

Inspect the traces for possible opons or solder bridges.

If a previous user had accidently connected a voltage to the audio
output connector, what parts would be likely to be fried? Is there
a blocking cap that would keep a DC voltage away from the op amp?

If you are still not sure what is wrong, consider what parts are cheapest
and easist to replace. Depending on your soldering skills and equipment,
you might want to start with a resistor before you try a the op amp.

Here is the article "AS WAS" posted on packet. (To the best of my knowledge) In addition to reading and verifying the schematics, you can compare this to the Gordon West instructions. My dad has had the mod done for some years, but I have yet to do it. Like he said, use the scematics and trace EVERYTHING. Then you will know what the mod does internally as well as externally. Hope this helps!!!

TS-440 S MODIFICATION TO USE ANTENNA TUNER FOR XT AND RX.-

Remove case from rig. Remove (4) screws that holds antenna tuner in place. Next slide antenna tuner out to get to the coax connections. Remove the in coax attached to antenna tuner from FO connector on filter unit (X51-1340-00). Remove coax from out connector on antenna tuner and install in FO CONNECTOR ON FILTER UNIT. Unplug and remove switch unit (X41-1610-00 N-14) from rig. Remove short wire from antenna connector to PC BOARD. Cut coax on the in connector of antenna tuner in half and connect cut end to switch unit PC BOARD Where short antenna wire was removed and shield to ground. Solder other half of coax to antenna connector and shield to ground, and plug other end into out conector of antenna tuner. Your still have control of antenna tuner with auto and thru switch. It works very well. Maybe someone can use this idea.

3619. IC706 vs FT900AT, can anyone compare?

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-30 00:00:00 UTC
From: knappsm@cig.mot.com
Message-ID: <KNAPPSM.95Oct30131558@crablegs.cig.mot.com>
Source record: 210773

Hello,

I'm looking around at HF rigs. I've been saving for the FT900AT but now the IC706 looks like a nice choice as well. The local ham store seems to have a split opinion, one guy likes the FT900 more, claims it has a better receiver. The other guy says that he knows people who have both and prefer the IC706 overall, including RX.

The FT900 can have an internal tuner while the IC706 has an external tuner (much more expensive). How capable is the Icom tuner? Can it tune a long wire, or other poor match?

Thanks for the help!

I am trying to obtain my no code tech license and want to buy a HT style radio. I need to know everything about the radios as possible in order to buy the unit that will fit my needs best. Any information would be greatly appreciated... I need info on what the options are on these radios and how they work etc...

Also what kind of range will I get at 5 watts using the rubber ducky antenna from inside a car if I am not using a repeater?

Thanks

>of the manual if you have one.

Jim, if you're talking about the 4 pin socket marked CAL, that's
not a tube socket. The crystal calibrator is an accessory circuit
in a box that plugs into that socket. It uses a 6BZ6 pentode as
a 100 kHz oscillator/harmonic generator. It's a somewhat strange
circuit with the crystal connected between the control and screen
grids of the tube. You'll have to dig around to find a calibrator
accessory for your radio.

Hi there.

I wonder if anyone out there has an MSM9520RS (or 9520 for short) 40 pin wide DIL package I.C. for a Yaesu FT-107??

This is a super old rig which I enjoy using a lot but unfortuneately the counter unit has died and Yaesu seem not to stock this part any longer :(

Any assistence would be greatly appreciated. Willing to pay for component if someone has one

Thanks!

From: Robert D Houghton <rhought@cello.gina.calstate.edu>
Message-ID: <472jkn$jgm@cello.gina.calstate.edu>
Source record: 210841

I have the FT-8500 and I'm very pleased with it. The radio that it is replacing is the DR-590T. I don't know what has changed with the newer Alinco radios, but there were a number of "features" concerning the way the operating system was designed on the 590 that I didn't like. For example, when you are in the Channel memory mode, the mic up/down buttons slew frequency 5 khz at a time rather than changing the channel. To change the channel, you have to reach down and push the 1 Mhz up/down switch. Lot's of little things like that.

The one thing that some peopl don't like about the FT-8500 is the "Mr Potatohead" microphone. It has a button for everything. I like it, since it eliminates the "push this button 5 times to to this" syndrome. It is actually pretty easy to operate this radio without accidentally hitting all those buttons. Also, Yaesu tells me that there is another version of the mic coming out with fewer buttons.

73,

Bob

Dave-

I haven't received mine yet, but recall that instructions for operating it differ between 6 Meters and HF. Check the IC-706 owner's manual. I think you have to continue holding the tune button until it is matched, even though you don't on HF.

It's clear there is some extra impedance that has worked its way into the circuit. The fact that the SWR bridge on the Heath tuner shows no SWR suggests that the impedance bump is occuring earlier in the circuit than where the bridge senses the transmission line voltage.If the switch checks out okay, then try changing the coax between the transmitter and the ATU. Also, try disconnecting the coax from the transmitter and measuring the resistance between the center and shield,with the ATU in the bypass position. It should read 50 ohms. An impedance analyzer (like the Autek RF1) would show whether you've got some capacitance or inducting in the line that you don't know about.

This is a sad day in radio, isn't it! Imagine that, most hams not able to wire up one or two transistors! :-(

Anyway, the relay method is fine. I only wanted to point out an alternative method that has time delay and mechanical advantages, even though more complex.

BTW, even the 12 v relay should have a back pulse cancelling diode across it's coil. That prevents the spike when the relay line is opened (and the field in the relay collapses) from causing damage to the exciter.

Bury it in RTV after you float it up off the board a bit on longer leads!!! Probably the PCB is acting like a mechanical sounder. I do that with my vacuum relays because they wake up the neighborhood!

Sleezy.
>Dave
>
>

Dave, The other person was correct. The blackening is NOT a sign of a defective tube. It is a normal result of the "getter" process used in evacuating air from small tubes.

The thing to watch for is if the normally silver or black area turns white, then the tube likely has an air leak. The best way to test the tube is in a tube tester, NOT by eye.

You could have a problem in the amplifier causing the tubes to fail, or good ole Jimmy may be selling you jjunkk.

Go to an automobile wrecking yard. What you seek is used
on Toyota steering columns and Subaru test points. I then
get new connectors they are a special spade connector
designed to lock in the palstic housing and make up cables.
NAPA parts houses stock both the metal spade connector part
and red/black cable. Removing the old spade connectors from
the plastic housing take a small screw driver and some patience
but can be easily done once you see what you have to do.

Good luck 73 de Jerry

Thanks for the thought Chris. I know there have been discussions
about it, but it will be a cold day in heck when hams are forced to
stop transmitting with equipment they've purchased (or made) in a band
they are still legally licenced to use. Let 'em talk all they want.
(Excuse me while I reach for my fire suit.)

In reality, I think ATV on UHF will become less desireable as more and
more hams see the "near cable quality" video achievable on higher
frequencies using FM. We don't need any more legislation here. I
think it will naturally fade especially in populated areas where
packet and other non-ham activities compete for the spectrum and cause
some ATV interference.

Just like older, smog producing cars. Why legislate them out of
existance? Every year there are less and less of them around and soon

they will be "no more" all by themselves. Amazing how that works!

Just to update our thousands of visitors in the past few days. The Ham Radio Today On-Line pages are all ready for the grand opening on November 3rd. We've got loads of features (reviews, ex-PMR conversions, beginners guides, news etc.) ready for the day, so be prepared. So you'd better all stay up until midnight on the night, because that's when it'll be released! That's 00:00 hours on November 3rd! The URL is:

http://www.tcp.co.uk/~slorek/

No other site can touch Ham Radio Today On-Line - you won't believe your eyes when you see it!

3647. IC-701 VFO problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-31 00:00:00 UTC
From: proctor@onyx.nist.gov
Message-ID: <4761or$scj@dove.nist.gov>
Source record: 210785

Hello All,

I am using an Icom 701 which is on loan to me. The rig has only been used a few times in the past 5 years, and had several problems when I put it back into use. I have solved all of the problems except for this one:

When I switch from VFO "A" to VFO "B" the frequency in A increments by one count (100 Hz) and when I switch from B back to A, the contests of B decrement by 1 count. The manual states that when switching from one VFO to the other, the settings are stored in memory. This makes the rig useless for split operation, since you can never set both VFO's to the desired frequency. Also, pressing the "fast" tune button causes the frequency to jump to an arbitrary frequency.

The owner of the rig used to have the schematics, but they cannot be found now. All I have is a block diagram to go on. It looks like the problem is in the "Driver Unit" which is what Icom calls the board which controlls the VFO's.

Has anyone experienced this problem? Does anyone have the schematic for the 701's Driver Unit that they would be willing to fax to me?

Any help would be appreciated.

3648. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-31 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <4760ev$ibj@mrnews.mro.dec.com>
Source record: 210786
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

[I'm including part of the Motorola listings from the FAQ at the bottom, so you all can get a look at how it's presented, and what info I need. I need to do a lot of cleaning up and organizing of this somewhat scattered listing format!]

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band?
Easy: re-crystal, tweak a few tuning screws
Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design
of some circuits, you must pay
authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every other week for a while, until the FAQ
is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

Greetings,

Does anyone know if Diamond is still making antennas? I've been "off the air" for over a year - due in part to vandalism to my truck. I had excellent results with my Diamond dual-band antenna. Are they still around? Who's their major U.S. distributor? Any other recommendations for a mobile dual band (V/UHF) antenna? All help, hints, contact info is appreciated!

>2m vertical) and just bought the 6m equivalent (AR-6?). Is there a
>problem with having the two of them right next to each other (inches
>apart)?

Well, you might get away even with 1/4 wl on two, but expect some strange effects like detuning. Try to keep them as far apart as possible.
No touching!

The 6 m vert will work for FM as well as SSB during sporadic E openings, since by sporadic E the polarization gets scrambled anyway.

Both the HF and the 2m SWR meters will probabely allow you to determine the SWR, (see if results are consistent!), but will not allow you to measure the absolute power output.

3655. RS HTX-202 questions (intermod, batts)

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-31 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfDHAGq7.HJo@netcom.com>
Source record: 210793

OK, my HT-for-a-day, an ICOM 2GXAT went back to the dealer today after I decided it had severe RX intermod problems (just sitting on the shelf in the shack, duckie attached, I was hearing lots of intermod products on 146.52...)

I hadn't been following the discussion of the HTX-202 when it was active, but here are my questions:

1. Does the HTX-202 have good intermod rejection (like my old IC-2AT)? I don't need out-of-band RX, I _DO_ need decent intermod performance.

2. Does the HTX-202 accept "classic" ICOM battery packs (I have BP-3, BP-7, BC-35 charger, etc., and I'd like to be able to share accessories).

3. What's the output power with the stock battery pack? I gather it would make more output when powered from 12VDC. Is this recommended? Is a compatible (12V) battery pack offered from someone? Can you run the HT directly from car 13.8 VDC thru a cig lighter plug? If there is a 12VDC battery pack, and if the HTX-202 is compatible otherwise with the BC-35, will the BC-35 charge the 12V pack properly?

4. Any other words of wisdom from HTX-202 guru?

Thankx, direct e-mail preferred.

I need a service manual for a Kenwood BC-6 battery charger. This charger was used for the TH-21AT and 41AT HT's, 1987 vintage. What I really need is the part number for the plastic clips that hold the batteries against the charger contacts. I contacted Pacific Parts, Kenwood's parts distributor and got nowhere quick. I'm setting up this HT for my goddaughter who will have her licence by Christmas and would like to have it ready for her. Please reply to buzzbomb@minn.net or ralph.w.bierbaum@medtronic.com. I'll pay for copying and postage or will copy and return.

>All comments and suggestions are appreciated in advance.
>
>Thanx,
>
>Rudy
>
>rgiron@netvoyage.net
>
Yeah, I have comments. I ordered my Atlas over two years ago,
and payed in full. I still haven't seen my radio. It sounds like
there are some new people running the company now and they are
promising to deliver "sometime soon"; however, they cannot give a
delivery date.
In this time I have asked for a refund. When the new people took over
they began answering the phone again. I was refused the refund and told
to wait for my radio.
My order number is well under 300. So if there were some produced I
should have mine. I have yet to hear of anybody actually physically
seeing one under power.
In all fairness, Atlas products of the past were outstanding
radios. The ones I have experience with were quality gear. It is
for that reason and the execellent reputaion Herb Johnson made building
Swan and Atlas transceivers I ordered my "Little Giant". But my "little
giant" is a no show, and those excellent Swan and Atlas transceivers were
built almost two decades ago.

My advice is buy a Yaesu. The UPS man will be putting it on your door
step next week.

Dave N7MJW

PS - If you still really want the 400X. Get a hold of me, because it
seems I'm going to get one whether I want one or not. And at a two year
wait, I'll probably have mine before you get yours if you order today.

Scott,
I agree with your observations about intermod.
I have an Alinco DJ580T, which is very wide band recieve, and I
Have never had an intermod problem with it, even driving thorough
the local "intermod alley". On the other hand I had a terrible
problem with a single band transmit, dual band recieve radio of
another manufacture. It was so bad I traded it in on another
radio from someone else.

Newsgroup: rec.radio.amateur.equipment
Date: 1995-10-31 00:00:00 UTC
From: "Gregory J. Buhyoff" <buhyoff@vt.edu>
Message-ID: <47558d$9q1@solaris.cc.vt.edu>
Source record: 210800

I am the person who posted the question about the potential for "pinched audio" from the 706. One person I listened to on 40 mtrs who was using the 706 had the "pinched audio" no matter if he had the processor on or off and no matter what mic setting he used. He also tried other microphones and the audio was pinched despite trying all combinations of microphones, gain settings and processor settings. I heard him a few days later and he said that Icom was going to need to replace a board which needed to come from Japan and that they were going to send him a "new" mic. I don't know if this was a new "type" mic or a replacement mic for the same kind that came with the rig. So, I am not sure that his problem is a pervasive one with this particular radio. I did not speak with him but listened for well over an hour while he tried to eliminate the problem. I can't remember his call, but he is on most mornings at 09:00Z on 7.158 with a group of VK's, W5UD and W3KRQ. After hearing of his problem about a month ago (he got one of the first 706's I guess), I have heard about the problem first hand one other time (from a station on the air who experienced the same difficulty) and another time second hand. This is why I made the inquiry. However, based upon all the responses I received about the question of an inherent TX audio problem, I have concluded that the problem is not pervasive. I think it is limited possibly to a few radios OR because of the complexity of the menu settings and so on, some people are inadvertently not doing something properly or have set some parameter incorrectly. I guess this remains to be seen, but so many people have been so happy with their 706's that it does not appear to be a consistent flaw in the radio design. I was accused via private e-mail to my initial inquiry of being "out to get" the 706 and even "not wanting people to be happy"! Boy! there are sure some funny attitudes out there and additionally is silly since I have ordered one myself. I don't know why people get so bent out of shape when someone raises a question about something they own. I assume this is cognitive dissonance reduction -- whereby they don't want to believe they made a bad decision about a purchase. This newsgoup is for discussion of such issues and for the sharing of information, otherwise why have it?

Well it was a dumb idea to have a 120 volt dc relay in the 220. But it was designed when most exciters were tube types with big open frame relays with 5 or 10 amp contacts! Let's face it, even today interface requirements are non-standard. ALC voltage and response time, relay voltages, TX to external relay delay times, pin in and outs....it's a real chore hooking up anything! How about a standard system for all ins and outs?

3664. Re: RS HTX-202 questions (intermod, batts)

David Feldman (dgf@netcom.com) wrote:
: OK, my HT-for-a-day, an ICOM 2GXAT went back to the dealer today after I
: decided it had severe RX intermod problems (just sitting on the shelf in
: the shack, duckie attached, I was hearing lots of intermod products on
: 146.52...)

: I hadn't been following the discussion of the HTX-202 when it was active,
: but here are my questions:

: 1. Does the HTX-202 have good intermod rejection (like my old IC-2AT)? I
: don't need out-of-band RX, I _DO_ need decent intermod performance.

: 2. Does the HTX-202 accept "classic" ICOM battery packs (I have BP-3,
: BP-7, BC-35 charger, etc., and I'd like to be able to share accessories).

: 3. What's the output power with the stock battery pack? I gather it would
: make more output when powered from 12VDC. Is this recommended? Is a
: compatible (12V) battery pack offered from someone? Can you run the HT
: directly from car 13.8 VDC thru a cig lighter plug? If there is a 12VDC
: battery pack, and if the HTX-202 is compatible otherwise with the BC-35,
: will the BC-35 charge the 12V pack properly?

: 4. Any other words of wisdom from HTX-202 guru?

: Thankx, direct e-mail preferred.

: 73 Dave WB0GAZ dgf@netcom.com

Dave,
I am NOT a 202 guru, simply an owner.
Have had mine for 2 tears and very satisfied with it.
202 has a very tight helical coil front end to protect from intermod I
have noticed none in mine even when passing thru large cities as I drove
across the country. This also the reason there is no out of band
receive, the front end is too narrow.
Works fine off My van cigarette lighter at about 6 watts.
Comes with a nicad battery pack AND an case to fill with alkalines so you
can always replace the batts when you can;t charge the nicads.
Seems as sensitive as myold strandby Yaesu FT-208 with lots more features
of course.
Cost $188.00 at Dayton 2 yrs ago so price wise its a bargain. I note RS
offers it around that price quite often.
BTW RS has the radio to cig lighter plug too at a nominal cost.
Don't know about ICOM batt packs but 202 comes with 2 (see above).

> I am looking for information from anyone who has had experiences
>with the use of DSP filters for 2 meter FM and 2 Meter FM Packet to filter
>power line noise coming from power lines exterior to my house.

Hi Charles,

That's a tall order for any DSP! After noise goes through the receiver, the noise pulses start to look just like regular audio waveforms. The DSP simply can not tell the good signal from the bad signal.

The broader the bandwidth of the IF and audio circuit, the more likely you are to be sucessful. Any success will be limited by waveshape rounding in the receiver, and no DSP can overcome that. The ideal place for noise reduction is at the front end of the receiver.

Perhaps you could relocate your antenna or use a directional antenna? If the noise comes from one direction a sharp null would be better than high directivity.

Yes, I have one. It did cost nearly much as a second hand HP141 setup,
but at least you can lift it.
Basically - It works very well, but the lack of any sort of output means
that you can't record readings.

Even in the UK it took months to get one delivered.

Don't get too excited about receiving FM broadcast on it either. It is quite sensitive buy overload from strong stations is sooooo bad it becomes a quagmire of mush. One must disconnect the external antenna and use a short whip to seperate stations. It sure does a fine job of monitoring cordless phones on 46-49mhz.

Scott Rosenfeld NF3I (ham@w3eax.umd.edu) wrote:

How to add a hold function to the Radio Shack RF Frequency Counter:

Ground TP 17. In the schematic, TP17 is pin one of U3, connected to
+5V thru a 47k resistor. On the circuit board, TP17 is on the display
side, just right of the lower-right corner of the IC. Grounds are about
1/4 inch below and to the right, the three non-tinned points in the large
area of metal. TP17 is the tinned pad next to a SM resistor marked '473'
for 47k.

I rigged a momentary switch to ground TP17 thru a 1k resistor (you never
can tell) and it works just fine! I drilled a small hole to mount the switch
just above the plastic depression so I could push the button with my right
thumb. A small toggle switch would fit if you want to hold longer.

Call me wierd (I know some of you do anyway), but what closed the
sale for me was the presence of FM broadcast reception capability
on this rig. The novelty value of receiving FM broadcast on a HF
rig was too much to resist. I can hardly wait for the service
manual to become available so I can mod it to do FM *stereo*. :-)

3684. IC-706 Rig Selective Scan Memory Mode Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1995-11-01 00:00:00 UTC
From: aust@gandalf.sp.TRw.COM
Message-ID: <9511012217.AA01261@noldor>
Source record: 210724

Attn: IC-706 Users:
Has any one had any problems with the Selective Scan Feature on
Memory Channels.
I programmed in 6 VHF-FM simplex frequencies into my IC-706, in
memory channel locations 1 thru 6. Then went back to to the G2 menu,
and pressed SEL while in Memory Channel Mode, This created a small S
to appear next to each channel I did this to.
I did this with Ch1,Ch2,Ch3, and Ch4, creating the Flagged S symbol
for these channels. I left Ch5, and Ch6 with no Flagged S symbol.
Next I pressed SCN for scan and the IC-706 scanned all 6 channels,
when I expected only 4 channels to be scanned.
Did I do something wrong here or is it a bug in the firmware, can
anyone confirm this, or at least tell me to go back to the manual??

I've also found these connectors on some older Ford vehicles. Problem is
getting the spade connectors out of the plastic in order to put larger wire
in place.

FYI, I found a source for these connectors at HamCom (Arlington, TX) this
year. They came in a pre-assembled loop (both male/female connectors)
and 10 ga. wire. I *think* the name of the company was Connectors Plus.
I don't have their phone number handy but I'm almost positive they have
a 800 number.

>tuning is 3:1 or less). I'm checking this one out with ICOM and will
>report back.

Ok, you guys suckered me into getting one of these units too. Now
I can talk about them. According to the manual, the ATU in "through
inhibit" mode, doesn't give up as long as the VSWR *presented to the
radio* is less than 3:1. What the VSWR is on the antenna feeder is
irrelevant to this action (according to the manual). The manual also
says that "through inhibit" works the same way regardless of whether
you're operating HF or 6 meters. The only difference between 6 meter
tuning and other HF tuning is that you must *always* manually do
tuning on 6 meters by holding the tune button in. On the other bands,
tuning can be automatically initiated by PTT.

The only real difference "through inhibit" makes is that with it
off the ATU gives up if it can't deliver a match *to the radio*
of better than 1.5:1. With "through inhibit" on, the ATU won't
give up unless it can't present a match *to the radio* of better
than 3:1. Thus "through inhibit" is really just a match *sensitivity*
adjustment.

The VSWR *on the antenna feeder* never matters, except in that it
may present an impedance to the ATU that is outside the ATU's matching
range for *certain feeder length and load impedance combinations*. There
will always be *some* feeder length which will present an impedance to
the ATU inside its matching range for *any* combination of antenna impedance
and line VSWR (that length may be totally impractical in some cases of
course). If the ATU gives up at a certain frequency, add or subtract
some length to the feeder and try again. Remember, a transmission line with
SWR is a *transformer*, and the impedance transformation at a given
frequency is a function of *line length*.

The ATU will only deliver a match when the impedance presented to it
is in the range of 16.7 to 150 ohms on HF, and 20 to 125 ohms on 6 meters.
Now that's not a very broad range, so you should expect to have to aid
it externally for difficult matches. One way is to adjust the line length,
using the transformer action of a transmission line with a non-unity

VSWR as an additional tuning tool. Another is to use external L networks to bring the presented impedance into the ATU's operating range.

Unfortunately, the specifications don't break down the ATU working impedance range into resistive and reactive parts. That would be more useful information. Then you could use the Smith chart directly to determine if a given line length/antenna load impedance can be tuned by the ATU.

Gary

Hi all, my friend would like to construct his own remote control system for a school project. He would like to know what kind of components are needed in order to make the simplest remote control. I think what he meant by the simplest one is a remote switch that can turn something on and off.

Thanks for your help in advance,

Source record: 210732

Hi all,

A friend of mine just bought an old pk232 (I think the ROM date is 1989), and he'd like to upgrade it to a pk232MBX. Right now the thing doesn't have PACTOR, or even a 'maildrop' option. I know there is an upgrade kit for these TNC's, and I wonder if someone can give me some info on this...i.e., who sells it, around how much it sells for, etc...

thanks in advance and 73 de Luis XE2MXU/N5UHB

Because HT are really expensive in France, I want to by FT-51
or TH-79 in USA, but I don't know which one can I choose !!!

- Does FT51 and TH79 have 1750Hz burst tone
- Is FT51 rH version interesting
- What is 'the' good price for these HT

Sorry for my poor english...

Subject: HELP WITH ACC 850 CONTROLLER
From: Elliot Steinberg <ELLI@CHEVRON.COM>
Date: 31 Oct 1995 15:51:30 GMT
Message-ID: <475gm2$g1m@hsun27.chevron.com>

I have an ACC 850 controller and am looking for help in resetting it. It
came from an estate and I have no manual at this time for it. I have
ordered the manual but that will take a while can someone help me.

73
N6QHO...Elliot

I don't know if this will work with the 850 controller, but it works with
my RC96, enter the control operators access code, then 18. Actually, now
that I think about it, you probably don't have the control operator's
access code. To set the main, programming, access code on the 96 there is
a switch to hit in the back. Actually forget everything I just said, I
don't think you can do it without the instructions. Even with the
instructions, it took hours to first get my controller to do what I
wanted. Once it was working I was very pleased with the performance.

Good luck.

From: ab910@lafn.org
Message-ID: <1995Nov2.083921.25024@lafn.org>
Source record: 210653

Hi all. I work as a medic at about a dozen places in the LA area.
All of these venues use UHF HT radios of low quality. I hate using them due
to their unrelyable nature. I want to get and program my own radio, thus
avoiding radio problems in the future. A Saber UHF seems well made (good
enough for the LAFD) and easy to find parts for. A proven type.

I know a little of the features and options of the Sabers and Astros
(Jedi's?) but I'd love any more in depth info you could point me to on
the net, or in print. Is there a good source for the radios and chargers?
What should I look for in a used unit? What fails on Sabers/Astros/Jedi's?
Prices seem to hover in the $600 used range? Is this about right?
How hard is it to find the software to program them?

Any advice would be great. I will use it, trust me.

Matt Davies

Ross,

It is for the memory backup unit. When the unit is plugged in you can
move your rig from the base to mobile and vice versa without losing
your programmed memories.

I don't know of any other differences.

3701. Re: IC-706 HF Rig Features

Newsgroup: rec.radio.amateur.equipment
Date: 1995-11-02 00:00:00 UTC
From: "Gary P. Fiber" <gfiber@halcyon.com>
Message-ID: <47aiup$qh2@news.halcyon.com>
Source record: 210655

The programs written for the IC-735 most likely will not work as they are four bit frequency data and the IC-706 is expecting to see 5 bit frequency data. The good news is the IC-735 is the only radio ICOm made that requires four bit frequency data. So about any other Icom control program will work. Also for budding programmers, the protocall is now in the owners manual for the IC-775DSP, 706 and 820H.

< How been the demand/availability for the IC-706

IC706 is indeed the hottest selling radio around ... every time we get a
shipment, it is totally sold out before the radios arrive. The only
negative thing we have heard is that, on two meters, sensitivity outside
the ham band is down, but that is a blessing in disguise, as we have also
not heard of any "intermod" problems either - and do you buy it to be a
scanner, or do you buy it to be a VHF Ham Radio tranceiver?

If you are looking for one, I would suggest that you get your order in
asap, and be prepared to wait a bit ... none of the waits have been
really long at this point!

Thanks for the inquiry!

Very 73 ...

Anyone interested in getting together a Yaesu FT301 Group?? There a a few of us here on the coast that are quite knowledgable with them. It came to light a few days ago when a fellow Collins man came out of the closet and told me he QRP'd with his 301s, and I laughed as I have owned a couple over the years and have kicked myself every time I get rid of them! I now have an analogue 301 with the brick, and I put the AM and CW filter in it as well as a few XTALS's, and I will never ditch it, and those that own them know why! Anyone who has heard one QRP has to admit that it's hard to beat a signal like that! (antenna dependant of course...) The problem is a few of them are flying around the swap meets, and are going cheap cheap! Must be that the sellers don't know what they've got! If you've got one and need any tech. support.... lets get our heads together and keep these babys on the air!

This sounds like the solution I may be looking for. Can you give me any idea if these are commonly found relays? Are they drop-in equivalents at 12 volts and do you know the approximate change over time specs (equal or better?)

Thanks again. May to you direct bounces, by the way.

I don't post here usually 'cuz I don't have anything interesting to say, but this is one of my favorite newsgroups to read, and maybe I will post more in the future. Anyhow, I wanted to let you all know that I got some really good catalogs in the mail yesterday. They are from Jan Distributing which is local here in town, but they deal with mail order a lot and stuff can be shipped to your door. They have some pretty cool stuff and I thought I would let you all know about it.

They have 6 lines of catalogs, and they can mail them out to you. I bought the Christmas catalog, the Major Appliances & Electronics catalog, and the Personal Shoppers Catalog. I was really impressed. They have just about everything I want for my Christmas List (except a million dollars HEE!)

Anyhow, Just thought I would let you know about these people. I went over and got a list of catalogs and prices to post here on the internet.

1) Christmas Catalog $7.00
2) Personal Shoppers $10.00
3) Health & Fitness $6.00
4) Major Appliances
& Electronics $5.00
5) Office Products $6.00
6) Profesional
Maintenence &
cleaning $5.00

If you need their address it is as follows:

Jan Distributing
18 International Village
Rolla, MO 65401

Well, gonna run now and figure up more of my christmas wish list...See Ya!
